

## Table of Contents

|  |    |
|--|----|
| <b>Introduction</b> . . . . .  | ix |
| <b>Chapter 1. The Loop-shaping Approach</b> . . . . .                                | 1  |
| 1.1. Principle of the method . . . . .   | 1  |
| 1.1.1. Introduction . . . . .  | 1  |
| 1.1.2. Sensitivity functions . . . . .   | 1  |
| 1.1.3. Declination of performance objectives . . . . .                               | 5  |
| 1.1.4. Declination of the robustness objectives . . . . .                            | 8  |
| 1.2. Generalized phase and gain margins . . . . .                                    | 14 |
| 1.2.1. Phase and gain margins at the model's output . . . . .                        | 14 |
| 1.2.2. Phase and gain margins at the model's input: . . . . .                        | 16 |
| 1.3. Limitations inherent to bandwidth . . . . .                                     | 17 |
| 1.4. Examples . . . . .  | 18 |
| 1.4.1. Example 1: sinusoidal disturbance rejection . . . . .                         | 18 |
| 1.4.2. Example 2: reference tracking and friction rejection . . . . .                | 20 |
| 1.4.3. Example 3: issue of flexible modes and high-frequency disturbances . . . . .  | 25 |
| 1.4.4. Example 4: stability robustness in relation to system uncertainties . . . . . | 29 |
| 1.5. Conclusion . . . . .  | 30 |
| <b>Chapter 2. Loop-shaping <math>H_\infty</math> Synthesis</b> . . . . .             | 33 |
| 2.1. The formalism of coprime factorizations . . . . .                               | 33 |
| 2.1.1. Definitions . . . . .   | 33 |
| 2.1.2. Practical calculation of normalized coprime factorizations . . . . .          | 35 |
| 2.1.3. Reconstruction of a transfer function from its coprime factors . . . . .      | 36 |

|  |            |
|--|------------|
| 2.1.4. Set of stabilizing controllers – Youla parameterization of stabilizing controllers . . . . .          | 37         |
| 2.2. Robustness of normalized coprime factor plant descriptions . . . . .                                    | 42         |
| 2.2.1. Taking account of modeling uncertainties . . . . .  | 42         |
| 2.2.2. Stability robustness for a coprime factor plant description . . . . .                                 | 43         |
| 2.2.3. Property of the equivalent “weighted mixed sensitivity” form . . . . .                                | 46         |
| 2.2.4. Expression of the synthesis criterion in “4-blocks” equivalent form . . . . .                         | 52         |
| 2.3. Explicit solution of the problem of robust stabilization of coprime factor plant descriptions . . . . . | 54         |
| 2.3.1. Expression of the problem by the Youla parameterization . . . . .                                     | 54         |
| 2.3.2. Explicit resolution of the robust stabilization problem . . . . .                                     | 57         |
| 2.4. Robustness and $\nu$ -gap . . . . .   | 77         |
| 2.4.1. $\nu$ -gap and ball of plants . . . . .   | 77         |
| 2.4.2. Robustness results associated with the $\nu$ -gap . . . . .   | 79         |
| 2.5. Loop-shaping synthesis approach . . . . .   | 82         |
| 2.5.1. Motivation . . . . .  | 82         |
| 2.5.2. Loop-shaping $H_\infty$ synthesis . . . . .   | 83         |
| 2.5.3. Associated fundamental robustness result . . . . .  | 89         |
| 2.5.4. Phase margin and gain margin . . . . .  | 89         |
| 2.5.5. 4-blocks interpretation of the method . . . . .   | 90         |
| 2.5.6. Practical implementation . . . . .  | 92         |
| 2.5.7. Examples of implementation . . . . .  | 100        |
| 2.6. Discrete approach . . . . .   | 120        |
| 2.6.1. Motivations . . . . .   | 120        |
| 2.6.2. Discrete approach to loop-shaping $H_\infty$ synthesis . . . . .                                      | 121        |
| 2.6.3. Example of implementation . . . . .   | 127        |
| <b>Chapter 3. Two Degrees-of-Freedom Controllers . . . . .</b>   | <b>135</b> |
| 3.1. Principle . . . . .   | 135        |
| 3.1.1. Reference tracking . . . . .  | 135        |
| 3.1.2. Parameterization of 2-d.o.f. controllers . . . . .  | 141        |
| 3.2. Two-step approach . . . . .   | 143        |
| 3.2.1. General formulation . . . . .   | 143        |
| 3.2.2. Simplification of the problem by the Youla parameterization . . . . .                                 | 145        |
| 3.2.3. Extension . . . . .   | 150        |
| 3.2.4. Setting of the weighting functions . . . . .  | 152        |
| 3.2.5. Associated performance robustness result . . . . .  | 154        |
| 3.3. One-step approach . . . . .   | 156        |
| 3.3.1. General formulation . . . . .   | 156        |
| 3.3.2. Expression of the problem by Youla parameterization . . . . .   | 158        |
| 3.3.3. Associated performance robustness result . . . . .  | 161        |

|   |            |
|---|------------|
| 3.3.4. Connection between the approach and loop-shaping synthesis . . .                       | 163        |
| 3.4. Comparison of the two approaches . . . . .   | 165        |
| 3.5. Example . . . . .  | 166        |
| 3.5.1. Optimization of an existing controller (continued) – scanning . . .                    | 166        |
| 3.6. Compensation for a measurable disturbance at the model’s output . . .                    | 174        |
| 3.6.1. Principle . . . . .  | 174        |
| 3.6.2. Example . . . . .  | 179        |
| <b>Chapter 4. Extensions and Optimizations . . . . .</b>                                      | <b>187</b> |
| 4.1. Introduction. . . . .  | 187        |
| 4.2. Fixed-order synthesis . . . . .  | 188        |
| 4.2.1. Fixed-order robust stabilization of a coprime factor<br>plant description . . . . .    | 188        |
| 4.2.2. Optimization of the order of the final controller. . . . .                             | 197        |
| 4.2.3. Example: fixed-order robust multivariable synthesis . . . . .                          | 214        |
| 4.3. Optimal setting of the weighting functions . . . . .                                     | 220        |
| 4.3.1. Weight setting on the basis of a frequency specification. . . . .                      | 220        |
| 4.3.2. Optimal weight tuning using stochastic optimization<br>and metaheuristics . . . . .    | 227        |
| 4.4. Towards a new approach to loop-shaping fixed-order<br>controller synthesis, etc. . . . . | 242        |
| 4.4.1. Taking account of objectives of stability robustness . . . . .                         | 243        |
| 4.4.2. Taking account of objectives of performance robustness . . . . .                       | 244        |
| <b>APPENDICES . . . . .</b>   | <b>245</b> |
| <b>Appendix 1 . . . . .</b>   | <b>247</b> |
| <b>Appendix 2 . . . . .</b>   | <b>251</b> |
| <b>Bibliography . . . . .</b>   | <b>255</b> |
| <b>Index . . . . .</b>  | <b>259</b> |
