Preface	xi
Acknowledgements	xv
Chapter 1. Innovation for Business Value and Cost-killing	1
1.1. Supporting profit and growth	3
1.1.1. A junction with the business	4
1.2. Assessing innovation	9
1.2.1. “ <i>Russian Ark</i> ”, a universal example	9
1.2.2. What does innovation involve?	10
1.2.3. A central mission for IT	12
1.3. Agility and alignment.	15
1.3.1. Improving performance by innovation	16
1.3.2. Improving adaptability and making alignment easier	18
1.3.3. Rationalizing complexity	21
1.3.4. Measuring operating indicators	23
1.4. Sustainable development and information assets	24
Chapter 2. The Transverse Information System	29
2.1. A regular increase in power	30
2.1.1. A field lying fallow	30
2.1.2. A metaphor for the city	32
2.1.3. The middle empire	33
2.1.4. Towards convergence	34
2.2. Optimizing business unit assets	36
2.3. The impact on the IT department agenda	41
2.3.1. A question of governance.	41

2.3.2. Redefined priorities	42
2.3.3. Supporting the NISS investment	44
2.3.4. Organizing transversality	45
Chapter 3. Master Data	49
3.1. An unclaimed asset	50
3.1.1. An eloquent study	50
3.1.2. Reference data.	52
3.1.3. The issues involved in good reference data management . .	55
3.1.4. Structuring data management	56
3.1.5. Transverse solutions for reference data	63
3.2. Master data management: centralization	65
3.2.1. Master data management	65
3.2.2. Two choices of architecture	67
3.2.3. A customer database in industry	67
3.2.4. Volume retailer databases	69
3.2.5. The state of the market	72
3.2.6. A rollout process, substantial projects	73
3.3. Enterprise information integration: federation	74
3.3.1. Virtual dynamic views.	74
3.3.2. Gestic: dynamic views for large-scale businesses	75
3.3.3. The state of the market	77
3.4. Between centralization and federation	78
3.4.1. Two very different models	78
3.4.2. A balance to be found	79
3.5. Data governance	80
3.5.1. Extent of data governance	80
3.5.2. Three significant central themes	81
3.5.3. A dedicated organization	82
3.6. Towards information management	83
3.7. Bibliography	84
Chapter 4. Service-Oriented Architectures	85
4.1. Basic impacts.	87
4.1.1. From application to service: the end of a reign?.	87
4.1.2. The fall of the interoperability wall	89
4.1.3. A central domain with a far-reaching impact	90
4.2. A major lever for a change in progress	93
4.2.1. New business models	93
4.2.2. More effective information systems	96

4.2.3. A more integrated information system.	100
4.3. A new experiment in the finance bank	102
4.3.1. The context.	102
4.3.2. The benefits	103
4.3.3. Pitfalls encountered	104
4.3.4. Lessons learned	105
4.4. Technologies and architecture	106
4.4.1. Components of the technological offer	106
4.4.2. eBay: intangible architecture principles.	114
4.4.3. The technological offer: the state of the market	115
4.4.4. The maturity model	116
4.5. Flexibility is an event? Yes, agent!	118
Chapter 5. Business Process Management	121
5.1. From managing business processes to BPM	122
5.1.1. An example of the business process	122
5.1.2. The company and its business processes	125
5.1.3. The issues involved in managing business processes	130
5.1.4. Business processes and managing information	134
5.1.5. The company, processes and ISs	136
5.2. Understanding BPM	137
5.2.1. BPM stands for business process management	137
5.2.2. Continuous process improvement	140
5.2.3. A process layer in the information system	141
5.2.4. Process layer contributions	144
5.3. The business process from the IS perspective	147
5.3.1. Processes seen from an IT angle	147
5.3.2. BPMS architectures	148
5.3.3. Which BPM for which processes?	153
5.4. BPM promises and prospects.	155
5.4.1. BPM: as simple as clicking a mouse	155
5.4.2. BPM standards: still some way to go	155
5.4.3. BPM and portal: a vision geared towards the user	156
5.5. Conclusion: the place of BPM in the company and in the IS	157
Chapter 6. Exchange Platforms	159
6.1. The development of data exchanges	159
6.1.1. EAI: the first wave of standardization	160
6.1.2. From data to process: a failed action?	161
6.1.3. From data to service: the enterprise service bus.	163

6.1.4. The convergence years: towards a global platform	165
6.1.5. The exchange platform: mediator of imbalances	170
6.2. Technologies and architectures	172
6.2.1. Architecture principles	172
6.2.2. The approach: the first elements of transversality	177
6.2.3. The framework	180
6.2.4. Change behavior: from now on a requirement	183
6.3. Project typology	185
6.3.1. A universal access door to integrated software packages . .	185
6.3.2. The continuous creation of the company backbone	186
6.3.3. Organizing transversal processes	187
6.4. A common foundation	188
Chapter 7. Complex, Innovative Business Architectures	189
7.1. Natural connections	190
7.1.1. Reference architecture	190
7.1.2. Processes and services	192
7.1.3. A new flexibility driver: complex event processing	194
7.2. An investigation into the distribution sector	198
7.2.1. The issues: reorganizing the editorial production line	198
7.2.2. Mapping and modeling	198
7.2.3. Keys for tomorrow	204
7.3. A project in the energy sector	205
7.3.1. The issue: aligning the production and consumption of energy	205
7.3.2. Looking for a stable state	206
7.3.3. Interoperability	207
7.3.4. Upgradeability	208
7.3.5. Conclusion	209
7.4. A program in retail banking	209
7.4.1. The issue: reorganizing around business processes	210
7.4.2. The NISS layer cake	211
7.4.3. Real-time control	213
7.4.4. Complete control coverage	215
7.4.5. Conclusion	218
Chapter 8. The Impact of NISS on Software Implementation	219
8.1. The process standard	221
8.2. Towards assembly and beyond	225
8.2.1. Principles and definition	225

8.2.2. Rolling out an international service architecture	230
8.2.3. Software as a service.	232
8.2.4. Redefining an R&D model: who has the power?	239
8.3. Model-driven architecture and docking	241
8.4. A “sourcing” process to be defined	244
Chapter 9. From Implementation to Measurement.	247
9.1. Towards operational excellence	248
9.1.1. Issues and objectives of operational excellence	248
9.1.2. Operational excellence and its IT variations	251
9.2. Business activity monitoring	253
9.2.1. The place of BAM in the IT landscape	254
9.2.2. Monitoring means of payment.	256
9.2.3. The functional model	258
9.2.4. Other applications	262
9.2.5. BAM and exchange bases	266
9.2.6. In full development	268
9.3. SOA management	269
9.4. The loop is completed	272
Chapter 10. Contribution and Impact of NISS on Organization	275
10.1. From the business unit to IT: a new fluency.	276
10.1.1. A tighter link.	277
10.1.2. Organization in project mode	279
10.1.3. Business architect and enterprise architect	281
10.2. Governance of information assets	283
10.2.1. The new roles	283
10.2.2. Specific roles for master data management	290
10.2.3. Roles specifically for managing services	292
10.2.4. Roles specifically for managing business processes	294
10.2.5. Shared responsibilities.	297
10.3. Organization methods.	297
10.3.1. From the matrix model to the transversal model.	298
10.3.2. A transversal model: competence centers	299
10.3.3. An example of an EAI competence center	303
10.4. Managing change and maturity stages	305

Chapter 11. How to Get the Best Out of NISS	307
11.1. The initial phases	307
11.1.1. Creating the vision	308
11.1.2. Identifying business cases.	309
11.1.3. Calculating proof indicators	310
11.1.4. Evaluating solutions	317
11.1.5. The importance of the initial phases	318
11.2. The foundations: creating platforms.	318
11.2.1. Organizational platform	320
11.2.2. Information platform	320
11.2.3. Technological platform	320
11.2.4. Methodology platform	321
11.3. From the process angle	322
11.3.1. An iterative framework	323
11.3.2. The methodology package	326
11.4. Here and now	328
11.5. Bibliography	329
Index	331
