Introduction	xi
Philippe GUEGUEN	
Chapter 1. Seismic Vulnerability of Existing Buildings: Observational and Mechanical Approaches for Application in Urban Areas	1
Sergio LAGOMARSINO and Serena CATTARI	
1.1. Introduction	1
1.2. Damage levels and building types classification	8
1.3. The macroseismic approach	12
1.4. The mechanical approach	21
1.4.1. Masonry buildings	24
1.4.2. Reinforced concrete buildings	37
1.5. Implementation of models for scenario analysis at territorial scale	52
1.6. Final remarks	57
1.7. Bibliography	57
Chapter 2. Mechanical Methods: Fragility Curves and Pushover Analysis	63
Caterina NEGULESCU and Pierre GEHL	
2.1. Introduction	63
2.2. Pushover analysis	64

2.2.1. What is pushover analysis?	64
2.2.2. How to calculate (or construct) a pushover curve?	65
2.2.3. Critical aspects in the construction (or calculation) of a pushover curve	72
2.2.4. Hypotheses and developments.	73
2.2.5. Evaluation of the target displacement and the performance point (PP)	77
2.3. The fragility curves	83
2.3.1. From deterministic evaluation to fragility functions	83
2.3.2. The “indirect” methods based on the capacity curve	89
2.3.3. “Direct” methods	94
2.3.4. Toward multivariate fragility functions	98
2.4. Conclusions	100
2.5. Bibliography.	101
Chapter 3. Seismic Vulnerability and Loss Assessment for Buildings in Greece	111
Andreas J. KAPPOS	
3.1. Introduction	111
3.2. Vulnerability assessment of RC buildings	113
3.2.1. Buildings analyzed.	113
3.2.2. Inelastic analysis procedure	115
3.2.3. Estimation of economic loss using inelastic dynamic analysis.	117
3.2.4. Development of pushover and capacity curves.	119
3.2.5. Derivation of fragility curves.	124
3.2.6. Fragility curves in terms of S_d	131
3.3. Vulnerability assessment of URM buildings	133
3.3.1. Overview of the methodology adopted	133
3.3.2. Purely empirical approach	133
3.3.3. Nonlinear analysis and capacity curves	136
3.3.4. Hybrid fragility curves	140
3.4. Region-specific fragility curves.	144
3.5. Development of earthquake scenarios	147

3.6. Concluding remarks	153
3.7. Acknowledgments	155
3.8. Bibliography	156

**Chapter 4. Experimental Method:
Contribution of Ambient Vibration**

Recordings to the Vulnerability Assessment	161
Clotaire MICHEL and Philippe GUEGUEN	

4.1. Introduction	161
4.2. Recordings and analysis of vibrations in structures	163
4.2.1. Historical background.	163
4.2.2. Stability and temporal variation of the vibrations	169
4.2.3. Analysis of recordings.	172
4.3. Observation of vibration of buildings and seismic design	176
4.3.1. Case of the common building in mainland France.	176
4.3.2. Experimental data and vulnerability models	181
4.4. Modeling existing structures with the help of experimental data	183
4.4.1. Modal model	183
4.4.2. Validation using the buildings of Grenoble . .	184
4.5. Application to the study of vulnerability at a large scale	187
4.5.1. Fragility curves and uncertainties	187
4.5.2. Application in Grenoble	190
4.6. Limitations and outlook	196
4.6.1. Nonlinear behavior.	196
4.6.2. Soil–structure interaction	198
4.7. Conclusions	199
4.8. Acknowledgments	202
4.9. Bibliography	202

Chapter 5. Numerical Model: Simplified Strategies for Vulnerability Seismic Assessment of Existing Structures	213
Cédric DESPREZ, Panagiotis KOTRONIS and Stéphane GRANGE	
5.1. Introduction	213
5.2. Case study	216
5.2.1. Presentation of the structure.	216
5.2.2. Spatial discretization	217
5.2.3. Constitutive laws	219
5.2.4. Validation of the numerical model	219
5.2.5. Assessment of the seismic vulnerability (dynamic simulations).	223
5.2.6. Estimation of the seismic vulnerability using pushover analysis	232
5.3. Conclusions	238
5.4. Caution	240
5.5. Acknowledgments	240
5.6. Bibliography.	240
Chapter 6. Approach Based on the Risk Used in Switzerland.	249
Pierino LESTUZZI	
6.1. Introduction	249
6.2. Earthquake in the Swiss SIA construction codes.	249
6.2.1. Seismic hazard	250
6.2.2. New and existing: different approaches	254
6.2.3. Existing: approach based on risk	255
6.3. Examples: masonry buildings.	272
6.3.1. Analysis method and assumptions.	273
6.3.2. Isolated building of three stories	275
6.3.3. Seven-story “bar-shaped” building	278
6.4. Bibliography.	285

Chapter 7. Preliminary Evaluation of the Seismic Vulnerability of Existing Bridges 287
 Denis DAVI

7.1. Introduction 287

7.2. Experimental feedback from past earthquakes 288

7.2.1. Seismic behavior of bridges and main reasons for failure 288

7.2.2. The approaches for vulnerability evaluation developed abroad 298

7.3. The SISMOA method for the preliminary evaluation of the seismic vulnerability of bridges adapted to the French context 307

7.3.1. General context 307

7.3.2. Presentation of the calibration method 311

7.3.3. Calculation of the risk indexes and use of the results. 322

7.3.4. Examples of application 325

7.4. Conclusions 334

7.5. Bibliography 335

7.6. List of acronyms 337

List of Authors 339

Index 341
