Foreword	ix
Guy FRIJA	
Chapter 1. Ultrasound Medical Imaging	1
Didier VRAY, Elisabeth BRUSSEAU, Valérie DETTI, François VARRAY, Adrian BASARAB, Olivier BEUF, Olivier BASSET, Christian CACHARD, Hervé LIEBGOTT, Philippe DELACHARTRE	
1.1. Introduction	1
1.2. Physical principles of echography	3
1.2.1. Ultrasound waves	3
1.2.2. Wavefronts	4
1.2.3. Stress/Strain relation	5
1.2.4. Propagation equation	6
1.2.5. Acoustic impedance	7
1.2.6. Acoustic intensity	7
1.2.7. Mechanical Index	9
1.2.8. Generation, emission	9
1.2.9. Resolution	10
1.2.10. Propagation of a plane wave in a finite isotropic medium	11
1.2.11. Propagation of a plane wave in a non-homogeneous medium	13
1.2.12. Speckle	15
1.2.13. Nonlinear waves	16
1.2.14. Contrast agents	17
1.3. Medical ultrasound systems	18
1.3.1. Principle	18
1.3.2. The different stages in image formation	19
1.3.3. Ultrasound imaging probe	21

1.3.4. Modes of imaging, B-mode and M-mode, and harmonic imaging modes.	24
1.3.5. Doppler imaging	27
1.4. The US image	34
1.4.1. Properties of speckle, echostructure and statistical laws	34
1.4.2. Segmentation of US images.	38
1.4.3. Simulation of US images	41
1.5. Recent advances in ultrasound imaging	44
1.5.1. Generation/emission of ultrasounds	44
1.5.2. Signal- and image processing.	49
1.5.3. Multimodal imaging	60
1.6. A bright future for ultrasound imaging.	65
1.7. Bibliography	65
Chapter 2. Magnetic Resonance Imaging	73
Dominique SAPPEY-MARINIER and André BRIGUET	
2.1. Introduction.	73
2.2. Fundamental elements for MRI	76
2.2.1. Introduction	76
2.2.2. Vectorial description of nuclear magnetic resonance (NMR)	78
2.2.3. RF pulses and their effect on magnetizations	88
2.2.4. Elementary pulse sequences using the refocusing technique	97
2.2.5. Spatial discrimination of signals using gradients: fundamental principle of MRI	106
2.2.6. Multi-parameter aspect of MRI.	110
2.3. Instrumentation	115
2.3.1. Introduction	115
2.3.2. Recording the signal	117
2.3.3. Magnetic systems.	129
2.3.4. A typical MRI installation in a clinical environment	136
2.3.5. Operation and safety	139
2.4. Image properties	144
2.4.1. Introduction	144
2.4.2. Field of view.	144
2.4.3. Spatial resolution	148
2.4.4. Contrast and signal	155
2.4.5. Contrast elements in MRI practice.	162
2.5. Imaging sequences and modes of reconstruction.	168
2.5.1. Introduction	168
2.5.2. Overall view of acquisition sequences	168
2.5.3. Modes of reconstruction	195

2.6. Application of MRI: uses and evolution in the biomedical field.	208
2.6.1. Introduction	208
2.6.2. Spectroscopy and imaging: technical and clinical complementarity	210
2.6.3. Diffusion MRI: a morphological and functional approach.	217
2.6.4. Functional MRI (fMRI) of cerebral activation.	236
2.6.5. Bi-modal approach to MRI: the example of MR/PET	239
2.7. Bibliography	244
List of Authors	263
Index	265
