
Contents

Foreword	xi
Acronyms	xv
Introduction	xxxix
Chapter 1. Radiometry in the Optical Domain	1
Xavier BRIOTTET	
1.1. Introduction	1
1.2. Radiometric quantities	2
1.2.1. Preamble	2
1.2.2. Radiative quantities	3
1.2.3. Radiative properties of matter	6
1.2.4. Introduction to radiative transfer	23
1.3. General presentation of an optical system	29
1.4. Inversion methods used to retrieve optical properties and the surface temperature	37
1.4.1. Inversion methods in the reflective field (0.4–2.5 μm)	37
1.4.2. Inversion methods in the emissive range (8.0–12.0 μm)	45
1.5. Key points	51
1.6. Bibliography	52
Chapter 2. Multispectral Satellite Image Processing	57
Kenji OSE, Thomas CORPETTI and Laurent DEMAGISTRI	
2.1. Introduction	57
2.2. Concepts and reminders	58
2.2.1. Table of values	58

2.2.2. Image files storage	61
2.2.3. The four resolutions	68
2.3. Viewing of multispectral optical images.	75
2.3.1. Recording of the satellite multispectral image	76
2.3.2. Monochromatic display and contrast adjustment	76
2.3.3. Additive synthesis and color composite images	80
2.3.4. Change detection	82
2.4. The preprocessing of multispectral satellite images	83
2.4.1. Geometric preprocessing	83
2.4.2. Radiometric preprocessing	91
2.5. Extraction of information.	101
2.5.1. Unsupervised methods: clustering	102
2.5.2. Supervised methods: classification and regression	103
2.6. Conclusions and prospects	118
2.7. Key points	121
2.8. Bibliography	121
Chapter 3. Digital Terrain Models from Optical Images.	125
Jean-Marc DELVIT and Julien MICHEL	
3.1. Introduction: the main principles of spatial stereoscopy	125
3.2. Geometric modeling of the scene	127
3.2.1. General principle	127
3.2.2. Physical model of the scene.	129
3.2.3. Analytical modeling of the image geometry	132
3.2.4. Refining the viewing geometric model	134
3.2.5. Concept of epipolar geometry	141
3.3. Matching images.	143
3.3.1. Some key principles	144
3.3.2. Taxonomy of stereo-restitution algorithms.	144
3.3.3. Typical defects in disparity estimation	152
3.4. From disparity to the digital surface model	155
3.5. Conclusions and perspectives	158
3.6. Key points.	159
3.7. Bibliography	160
Chapter 4. Processing Hyperspectral Images.	163
Xavier CEAMANOS and Silvia VALERO	
4.1. Introduction.	163
4.2. Hyperspectral images, representation and preprocessing	165
4.2.1. What is a hyperspectral image?.	165
4.2.2. Noise reduction and retrieval of surface properties	166

4.2.3. Dimensionality reduction	167
4.2.4. Hyperspectral image compression	170
4.2.5. Other representations of hyperspectral data	171
4.3. Spectral matching	173
4.3.1. Spectral libraries	173
4.3.2 Spectral matching methods	173
4.4. Spectral segmentation.	175
4.5. Spectral classification.	177
4.5.1. Introduction	177
4.5.2. Non-supervised classification methods	180
4.5.3. Supervised classification methods	182
4.5.4. Spatial-spectral classification.	185
4.6. Spectral unmixing	186
4.6.1. Types of subpixel mixing and the mixing model	186
4.6.2. Estimation of the number of endmembers	188
4.6.3. Extraction of endmembers and estimation of abundance maps.	188
4.6.4. Example of spectral unmixing	189
4.7. Detection of targets, anomalies and objects	190
4.7.1. Target detection	190
4.7.2. Detection of anomalies.	191
4.7.3. Detection of objects	192
4.8. New directions in hyperspectral image processing.	193
4.9. Key points.	195
4.10. Bibliography	195
Chapter 5. Principle and Physics of the LiDAR Measurement	201
Patrick CHAZETTE, Julien TOTEMS, Laurent HESPEL and Jean-Stéphane BAILLY	
5.1. Introduction.	201
5.2. General aspects concerning the LiDAR instrument	201
5.2.1. Definition and background	201
5.2.2. Applications in geophysics	203
5.2.3. Onboard LiDAR systems	204
5.3. General aspects of LiDAR optical systems	207
5.3.1. Architecture and functional chain	207
5.3.2. Emission	208
5.3.3. Scanning	212
5.3.4. Reception.	213
5.4. LiDAR equation of the profiler	220
5.4.1. Interaction with scattering medium and vertical resolution	221

5.4.2. Backscattered power	222
5.4.3. Case of a short-duration laser emission	224
5.4.4. Background flux	228
5.4.5. Overlap function	229
5.5. Sources of uncertainty in the LiDAR measurement	232
5.5.1. Instrumental noise	232
5.5.2. Georeferencing uncertainties	238
5.6. Key points	243
5.7. Bibliography	243
Chapter 6. Airborne LiDAR Data Processing	249
Clément MALLET, Nesrine CHEHATA and Jean-Stéphane BAILLY	
6.1. Introduction.	249
6.2. LiDAR Waveform analysis	250
6.2.1. Technology	250
6.2.2. Waveform deconvolution	254
6.2.3. Unsupervised detection and decomposition methods	255
6.2.4. Supervised methods	257
6.2.5. Inversion methods of LiDAR equations	267
6.3. 3D point cloud processing	268
6.3.1. LiDAR Feature extraction.	268
6.3.2. Filtering and segmentation of 3D point clouds	275
6.3.3. Shape recognition: extraction of planes, spheres and cylinders	280
6.3.4. Classification, synergy with other data sources	281
6.4. Perspectives	286
6.5. Key Points	287
6.6. Bibliography	288
Chapter 7. Digital Terrain Models Derived from Airborne LiDAR Data	299
Clément MALLET and Nicolas DAVID	
7.1. Introduction.	299
7.2. Filtering of 3D point clouds	302
7.2.1. Introduction	302
7.2.2. Morphological filtering	305
7.2.3. Progressive densification	305
7.2.4. Filtering based on surface adjustment	307
7.2.5. Integration of non-geometric information	309

7.3. Interpolation/surface adjustment	310
7.4. Evaluation of digital terrain models	312
7.5. Key points	315
7.6. Bibliography	315
Glossary	321
List of Authors	339
Index	341
Scientific Committee	345
