

## Table of Contents

<b>General Introduction</b> . . . . .	ix
<b>PART I. TRANSFORMATIONS OF ATTRIBUTES [Z] AND USE OF QUANTITATIVE METHODS: GENERALIZATION AND MODELING.</b> . . . . .	1
<b>Part I. Introduction</b> . . . . .	3
<b>Chapter 1. From the Description to the Generalization of an Attribute Variable Z</b> . . . . .	7
1.1. Preliminary data analysis: a crucial step . . . . .	8
1.1.1. From classical description to exploratory data analysis (EDA) . . . . .	8
1.1.2. Exploratory data analysis and graphical representations . . . . .	11
1.1.3. Quantitative level of measurement and graphical representation . . . . .	19
1.2. Discretization: a constraint with several choices . . . . .	21
1.2.1. From data to the basic rules . . . . .	22
1.2.2. Choice of the number of classes . . . . .	23
1.2.3. Class limits and ranges. . . . .	26
1.2.4. Discretization and transformation of a variable . . . . .	46
1.3. Two essential requirements: choosing and assessing the methods. . . . .	53
1.3.1. A logic of reasoning . . . . .	55
1.3.2. Guidance for making the necessary choice. . . . .	56
1.3.3. Guidance and suggestions for making the decision . . . . .	66
1.4. Conclusion . . . . .	74
<b>Chapter 2. Generalization of Thematic Attributes.</b> . . . . .	77
2.1. Graphical transformations of reduction and generalization. . . . .	80
2.1.1. Shared characteristics and constraints of graphical processing techniques. . . . .	80
2.1.2. Techniques for quantitative variables . . . . .	84

2.1.3. Graphical techniques for multiple and mixed variables: taxonomic tree, scalogram, seriated matrix . . . . .	107
2.2. From mathematical structuring to standardized cartographic results . . .	118
2.2.1. A factorial method for quantitative variables . . . . .	121
2.2.2. Methods for frequencies and mixed variables . . . . .	129
2.3. From mathematical classifications to the interpretation of the results . .	137
2.3.1. Principles and review of classifications . . . . .	137
2.3.2. Representations and hierarchical classifications . . . . .	140
2.3.3. Non-hierarchical classifications . . . . .	145
2.4. Conclusion . . . . .	147
<b>Chapter 3. Modeling Thematic Attributes: Generalizable Cartographic Choices . . . . .</b>	<b>149</b>
3.1. Thematic models based on the concept of regression . . . . .	150
3.1.1. Common characteristics to regression models and to their representations . . . . .	150
3.1.2. Basic model: simple regression. . . . .	156
3.1.3. From statistical logic to thematic logic . . . . .	164
3.2. Models incorporating space via calculations . . . . .	181
3.2.1. A model linked to the concept of regression: trend surfaces. . . . .	181
3.2.2. A model integrating spatial component via distance: the potential model. . . . .	191
3.3. Models incorporating space by construction and by calculations . . . . .	197
3.3.1. A model of spatial interaction: the isochronous gravity model . . . .	197
3.3.2. A model based on the DAI – cellular automata – a method of simulating the evolution of geographic space . . . . .	208
3.4. Conclusion . . . . .	213
<b>Part I. Conclusion . . . . .</b>	<b>215</b>
<b>PART II. NEW CARTOGRAPHIC TRANSFORMATIONS AND 3D REPRESENTATIONS . . . . .</b>	<b>219</b>
<b>Part II. Introduction . . . . .</b>	<b>221</b>
<b>Chapter 4. Cartographic Transformations of Position . . . . .</b>	<b>223</b>
4.1. Cartographic transformations of position: aims and characteristics . . . .	224
4.1.1. Double objectives. . . . .	227
4.1.2. Characteristics. . . . .	229
4.2. Thematic CTPs of weight . . . . .	233
4.2.1. Characteristics and classification criteria . . . . .	235
4.2.2. Area cartograms: design and applications . . . . .	237

4.3. Thematic CTPs of links and directions. . . . .	252
4.3.1. Unipolar thematic CTPs of links and directions . . . . .	253
4.3.2. Multi-polar thematic CTPs of connections . . . . .	263
4.4. Differential CTPs or CTPs of comparison. . . . .	267
4.4.1. Steps of bidimensional regression . . . . .	268
4.4.2. Results and contributions of bidimensional regression . . . . .	272
4.5. Conclusion . . . . .	276
<b>Chapter 5. Taking a Third Dimension into Account, Transformation of Display . . . . .</b>	<b>277</b>
5.1. From perception of relief to the diversity of “3D” products . . . . .	280
5.1.1. Vision and perception in 3D: understanding and grasping depth . . . . .	281
5.1.2. Conventional 3D cartographic representations. . . . .	282
5.1.3. Diversity and classification of 3D images . . . . .	290
5.2. Basic principles of representations with a third dimension . . . . .	296
5.2.1. A constraint: the use of projection . . . . .	296
5.2.2. Basic parameters of 3D representations. . . . .	299
5.2.3. Specific principles depending on the continuity property . . . . .	310
5.3. DTMs as examples of possibilities of DSMs . . . . .	318
5.3.1. From the first digital attempts to establishing the vocabulary. . . . .	319
5.3.2. Modern DTMs . . . . .	321
5.3.3. Derived data and associated cartography . . . . .	333
5.4. A new way: true 3D. . . . .	339
5.4.1. The true 3D: basic principles . . . . .	340
5.4.2. Examples and usefulness of true 3D representations . . . . .	344
5.5. Conclusion . . . . .	348
<b>Part II. Conclusion . . . . .</b>	<b>351</b>
<b>General conclusion . . . . .</b>	<b>353</b>
<b>Bibliography . . . . .</b>	<b>355</b>
<b>Software used . . . . .</b>	<b>389</b>
<b>Appendices . . . . .</b>	<b>391</b>
Appendix 1. Table of standardized normal distribution . . . . .	393
Appendix 2. Critical values of Bravais-Pearson’s correlation coefficient R . . . . .	394
Appendix 3. Critical values of Student’s t . . . . .	395

Appendix 4a. Critical values of Fisher-Snedecor's F, significance level 0.05 . . . . .	396
Appendix 4b. Critical values of Fisher-Snedecor's F, significance level 0.01 . . . . .	397
<b>List of Authors</b> . . . . .	399
<b>Index</b> . . . . .	401
