

Table of Contents

Preface	xiii
Florence TUPIN, Jean-Marie NICOLAS and Jordi INGLADA	
PART 1. SYSTEMS, SENSORS AND ACQUISITIONS	1
Chapter 1. Systems and Constraints	3
Jean-Marie NICOLAS	
1.1. Satellite systems	3
1.2. Kepler's and Newton's laws	3
1.3. The quasi-circular orbits of remote sensing satellites	6
1.3.1. The orbit in the terrestrial referential: the recurrence cycle	8
1.3.2. The effects of the Earth's flattening: the precession of the orbits	12
1.3.3. Heliosynchronous orbits	13
1.3.4. Tracking the orbits	13
1.3.5. Usual orbits for remote sensing satellite	16
1.4. Image acquisition and sensors	17
1.4.1. Perspective ray in optical imagery for a vertical viewing	18
1.4.2. Perspective ray in radar imaging	19
1.4.3. Resolution and footprint	21
1.4.4. The swath in satellite imagery	26
1.4.5. Images and motion	28
1.5. Spectral resolution	30
1.5.1. Introduction	30
1.5.2. Technological constraints	31
1.5.3. Calibration and corrections	31
1.5.4. Image transmission	32

Chapter 2. Image Geometry and Registration	33
Jean-Marie NICOLAS and Jordi INGLADA	
2.1. The digital image and its sampling	33
2.1.1. Swath sampling	33
2.1.2. The pixels in optical imagery and in radar imagery	36
2.2. Sensor agility and incidence angle	36
2.2.1. Agility of optical sensors	36
2.2.2. Agility of radar sensors	38
2.2.3. The effects of the incidence variation on the ground cell size	38
2.2.4. The consequences of agility	40
2.3. Georeferencing of remote sensing images	40
2.3.1. From an image to an orthoimage	40
2.3.2. The metaparameters of VHR optical images	43
2.3.3. The levels of the images	44
2.3.4. SAR image specificities	46
2.4. Image registration	46
2.4.1. The need for image registration	46
2.4.2. Modeling the problem	47
2.5. Conclusion	52
Chapter 3. The Physics of Optical Remote Sensing	53
Olivier HAGOLLE	
3.1. Radiometry	53
3.1.1. Radiant energy, spectral energy, spectral sensitivity and equivalent energy	54
3.1.2. The flux	55
3.1.3. The irradiance	56
3.1.4. The radiance	56
3.1.5. Temperature and emissivity	59
3.1.6. Reflectance and albedo	59
3.1.7. Example of the use of photometric quantities	61
3.2. Geometric etendue, sensitivity of an instrument	62
3.2.1. Axis sensor	62
3.2.2. Scanners	63
3.2.3. Pushbrooms	64
3.3. Atmospheric effects	65
3.3.1. Absorption	65
3.3.2. Scattering	66
3.3.3. Radiative transfer in the atmosphere	67
3.3.4. Magnitude orders of the atmospheric effects	71
3.4. Spectral properties of the surfaces	73
3.5. Directional properties of the surfaces	74

3.6. Practical aspects: products, atmospheric corrections, directional corrections	78
3.6.1. Absorption correction	78
3.6.2. Scattering correction	79
3.6.3. Examples of atmospheric correction results	81
Chapter 4. The Physics of Radar Measurement	83
Jean-Claude SOUYRIS	
4.1. Propagation and polarization of electromagnetic waves	83
4.1.1. Propagation of electromagnetic waves	83
4.1.2. Polarization of the electromagnetic waves	85
4.1.3. Partially polarized waves	91
4.1.4. The group of Pauli matrices and the Stokes parameters	94
4.2. Radar signatures	97
4.2.1. RCS of a point target	97
4.2.2. Radar signature for extended targets – the backscatter coefficient σ^o	100
4.3. The basics of radar measurement physics: interaction between waves and natural surfaces	101
4.3.1. Introduction	101
4.3.2. Bare soil scattering	101
4.3.3. Sea surface scattering	108
4.3.4. Volume scattering	113
4.3.5. The penetration properties of electromagnetic waves	115
4.3.6. The effects of slope on radiometry	117
4.4. Calibration of radar images	118
4.5. Radar polarimetry	119
4.5.1. Introduction	119
4.5.2. Operating principles of the polarimetric radar	120
PART 2. PHYSICS AND DATA PROCESSING	123
Chapter 5. Image Processing Techniques for Remote Sensing	125
Florence TUPIN, Jordi INGLADA and Grégoire MERCIER	
5.1. Introduction	125
5.2. Image statistics	126
5.2.1. Statistics of optical images	126
5.2.2. Radar data statistics	127
5.3. Preprocessing	128
5.3.1. Sampling and deconvolution	128
5.3.2. Denoising	129
5.4. Image segmentation	131
5.4.1. Panorama of segmentation methods	131
5.4.2. MDL methods	132

5.4.3. Watershed	133
5.4.4. Mean-shift	135
5.4.5. Edge detection	137
5.5. Information extraction	137
5.5.1. Point target detection in radar imagery	137
5.5.2. Interest point detection and descriptors	138
5.5.3. Network detection	139
5.5.4. Detection and recognition of extended objects	139
5.5.5. Spatial reasoning	142
5.6. Classification	142
5.6.1. Bayesian approaches and optimization	142
5.6.2. Support Vector Machines	143
5.6.3. Neural networks	145
5.7. Dimensionality reduction	146
5.7.1. Motivation	146
5.7.2. Principal component analysis	147
5.7.3. Other linear methods	148
5.7.4. Nonlinear methods	148
5.7.5. Component selection	149
5.8. Information fusion	149
5.8.1. Probabilistic fusion	150
5.8.2. Fuzzy fusion	150
5.8.3. Evidence theory	152
5.8.4. Possibilistic fusion	153
5.9. Conclusion	153
Chapter 6. Passive Optical Data Processing	155
Devis TUIA	
6.1. Introduction	155
6.2. Pansharpening	155
6.2.1. Spectral methods: projection-substitution	157
6.2.2. Space-scale methods: multiresolution pansharpening	158
6.3. Spectral indices and spatial indices	160
6.3.1. Vegetation indices	160
6.3.2. Water-related indices	162
6.3.3. Indices relative to cloud properties	163
6.3.4. Surface texture: occurrence and co-occurrence	164
6.3.5. Geometrical indices of surfaces: morphological indices in urban areas	166
6.4. Products issued from passive optical images	170
6.4.1. Classification	171
6.4.2. Subpixel mixture analysis	175
6.5. Conclusion	179

Chapter 7. Models and Processing of Radar Signals	181
Florence TUPIN, Jean-Marie NICOLAS and Jean-Claude SOUYRIS	
7.1. Speckle and statistics of radar imagery	181
7.1.1. Physical origin	181
7.1.2. Statistics of fully developed speckle	182
7.1.3. Speckle noise in multi-look images	184
7.1.4. Estimating the number of looks in an image	188
7.2. Representation of polarimetric data	188
7.2.1. Canonical forms of the backscattering matrix	189
7.2.2. Taking depolarization mechanisms into account	190
7.2.3. Polarimetric analysis based on the coherence matrix	192
7.2.4. Synoptic representation of polarimetric information	197
7.3. InSAR interferometry and differential interferometry (D-InSAR)	198
7.3.1. Statistics of interferometric data	199
7.4. Processing of SAR data	202
7.5. Conclusion	202
PART 3 . APPLICATIONS: MEASURES, EXTRACTION, COMBINATION AND INFORMATION FUSION	203
Chapter 8. Analysis of Multi-Temporal Series and Change Detection	205
Grégoire MERCIER and Florence TUPIN	
8.1. Registration, calibration and change detection	205
8.2. Change detection based on two observations	206
8.2.1. Change measurements between homogeneous data	207
8.2.2. Change measurements between an image and a map	214
8.2.3. Change measurement between two classifications	215
8.2.4. Changes measurements between two heterogeneous images	217
8.3. Time series analysis	217
8.3.1. Temporal series with scalar data	218
8.3.2. Patterns in long time series with scalar or vectorial data	219
8.4. Conclusion	221
Chapter 9. Elevation Measurements	223
Michel ROUX, Olivier DE JOINVILLE, Florence TUPIN and Jean-Marie NICOLAS	
9.1. Optic stereovision	223
9.1.1. The principle of stereoscopy	223
9.1.2. Epipolar geometry	224
9.1.3. Searching homologous points	226
9.1.4. Reconstruction of the digital terrain and elevation models	230
9.1.5. Multi-view stereoscopy	231

9.2. Radargrammetry	233
9.2.1. Geometric aspects	234
9.2.2. Correspondence	236
9.3. Interferometry	238
9.3.1. Geometric aspects	239
9.3.2. Topographic fringes	240
9.3.3. Orbital fringes	242
9.3.4. Interferogram processing	246
9.4. Radar tomography	247
9.5. Conclusion	248
Chapter 10. Displacement Measurements	251
Yajing YAN, Virginie PINEL, Flavien VERNIER and Emmanuel TROUVÉ	
10.1. Introduction	251
10.2. Extraction of displacement information	253
10.2.1. Maximum of similarity	254
10.2.2. Differential interferometry	261
10.2.3. Corrections	266
10.3. Combination of displacement measurements	269
10.3.1. Analysis of time series	269
10.3.2. Reconstruction of 3D displacement field	274
10.4. Conclusion	280
Chapter 11. Data Assimilation for the Monitoring of Continental Surfaces	283
Lionel JARLAN and Gilles BOULET	
11.1. Introduction to data assimilation in land surface models	283
11.2. Basic concepts in data assimilation	286
11.2.1. Elements of a data assimilation system	286
11.2.2. Notations and definitions	291
11.2.3. Data assimilation: an inverse problem	293
11.3. Different approaches	294
11.3.1. Brief history and classification	294
11.3.2. Sequential methods	296
11.3.3. Variational assimilation	304
11.3.4. Parameter identification	307
11.4. Assimilation into land surface models	308
11.4.1. Soil moisture	308
11.4.2. The surface temperature	309
11.4.3. The vegetation	310
11.5. Data assimilation – in practice	311
11.5.1. Overdetermined problem, underdetermined problem and ill-posed problem	311
11.5.2. The adjustment criterion	311

11.5.3. The analysis or control vector: observability and equifinality . . .	312
11.5.4. Algorithmic parameters	313
11.6. Perspectives	318
Bibliography	321
List of Authors	347
Index	349
