

Table of Contents

Introduction	11
Chapter 1. History of Optical Telecommunications	15
1.1. Some definitions	15
1.1.1. Telecommunication.	15
1.1.2. Optical transmission	15
1.1.3. Radio or Hertzian waves	15
1.2. The prehistory of telecommunications	16
1.3. The optical air telegraph	17
1.4. The code	21
1.5. The optical telegraph	23
1.6. The heliograph or solar telegraph: a portable telecommunication system	25
1.7. Alexander Graham Bell's photophone	26
Chapter 2. Basic Principles of Electromagnetism	29
2.1. Introduction	29
2.2. Maxwell's equations in an unspecified medium.	29
2.3. Propagation of electromagnetic waves in an isotropic and linear homogeneous medium	31
2.4. Energy associated with a wave	33
2.5. Propagation of a wave in a non-homogeneous medium	34
2.6. Coherent and incoherent waves	35
2.7. Relations between classical electromagnetism and geometrical optics .	36
2.8. The electromagnetic spectrum.	38
2.9. Units and scales	39
2.10. Examples of sources in the visible light and near visible light.	42
2.11. Conclusion	44

Chapter 3. Emission and Reception of Optical Beams	45
3.1. Foreword	45
3.2. Introduction	46
3.3. Radiometry: basic concepts	47
3.4. Optical spectral windows, materials and eye-safety	51
3.5. Transmitters	53
3.5.1. Broad spectrum incoherent light emitting diodes	54
3.5.1.1. Structures	54
3.5.1.2. Near and far field patterns	54
3.5.1.3. Spectral characteristics	57
3.5.1.4. Electrical and optical characteristics	58
3.5.2. Laser diodes: high radiant power output, coherent waves	58
3.5.2.1. Structures	58
3.5.2.2. “ $(\Phi_{\text{transmitted}})/(I_{\text{injected}})$ characteristic”: static and dynamic	59
3.5.2.3. Spectra and near field patterns	58
3.5.2.4. Spectral and modal instabilities and light intensity noise	64
3.5.3. Use of amplifiers with “rare earth ion” doped fibers	65
3.6. Photodetectors	65
3.6.1. Optical spectral range and materials	66
3.6.2. Principle of operation and structures	67
3.6.2.1. Surface phenomena: optical reflection, charge mobility and current leakage	67
3.6.2.2. Absorption and conduction: semiconductor junctions	68
3.6.3. Responsivity, response time, junction capacity and dark current	70
3.6.4. Photomultipliers and semiconductor avalanche photodiodes	73
Chapter 4. Line of Sight Propagation	77
4.1. Influence of the propagation environment	77
4.1.1. Atmospheric absorption	78
4.1.2. Atmospheric scattering	79
4.1.3. Extinction and total spectral transmission	80
4.1.4. Earth’s atmosphere	80
4.1.4.1. Atmospheric composition	81
4.1.4.2. Aerosols	82
4.2. Visibility	83
4.2.1. Generalities	83
4.2.1.1. Definitions	83
4.2.1.2. Units and scales	85
4.2.1.3. Meteorology needs	85
4.2.1.4. Measurement methods	86
4.2.2. Visual estimate of the meteorological optical range	87

4.2.2.1. General	87
4.2.2.2. Estimate of the day time meteorological optical range	87
4.2.2.3. Estimate of the night time meteorological optical range	88
4.2.2.4. Estimate of the meteorological optical range in the absence of distant reference markers	90
4.2.3. Meteorological optical range measurement instruments	91
4.2.3.1. General	91
4.2.3.2. Instruments to measure the extinction coefficient	91
4.2.3.3. Measurement instruments of the scattering coefficient	93
4.2.3.4. Exposure and implantation of instruments	95
4.3. Atmospheric attenuation	96
4.3.1. Molecular absorption attenuation	96
4.3.2. Molecular scattering attenuation	98
4.3.3. Absorption attenuation by aerosols	99
4.4. Meteorological disturbances	100
4.4.1. Mie scattering attenuation	100
4.4.1.1. Theoretical aspect	100
4.4.1.2. Modeling	103
4.4.2. Cloud attenuation	110
4.4.3. Fog, haze and mist attenuation	112
4.4.4. Precipitation attenuation	114
4.4.4.1. Rain	114
4.4.4.2. Other hydrometeors (snow, hail, etc.)	119
4.4.5. Refraction and scintillations	123
4.5. Free-Space Optical links	127
Chapter 5. Propagation of an Optical Beam in Confined Space	129
5.1. Introduction	129
5.2. Various mechanisms of propagation	130
5.2.1. Line Of Sight links	131
5.2.2. Wide-LOS or cellular links	132
5.2.3. Reflected links	133
5.2.3.1. Specular reflection	134
5.2.3.2. Diffuse reflection	134
5.3. Propagation channel	139
5.3.1. Description of an infrared propagation channel	139
5.3.2. Channel characterisation	141
5.4. Modeling	143
5.4.1. Single reflection propagation model	143
5.4.2. Statistical model	145
5.4.2.1. Free-space loss	145
5.4.2.2. Impulse response	147
5.4.3. Exponential decay model	152

8 Free-Space Optics

5.4.4. Ceiling bounce model.	152
5.5. Additional power required to reach a given bit error rate	154
5.5.1. Additional power requirement and delay spread.	154
5.5.2. One-Off Keying (OOK) modulation	154
5.5.3. Pulse Position Modulation (PPM)	157
5.5.4. Multiple-Subcarrier Modulation (MSM)	157
5.6. Optical noise.	159
5.6.1. Tungsten filament light	159
5.6.2. Low frequency fluorescent light	159
5.6.3. High frequency fluorescent light.	159
5.6.4. Infrared audio transmitters	160
5.6.5. Infrared TV remote control devices	160
5.6.6. Effects of daylight	161
5.6.7. Artificial light model	162
5.7. Comparison of infrared and radio media and conclusion.	164
Chapter 6. Optical Communication	167
6.1. A reminder about digitization	167
6.2. Examples of laser applications outside optical communications	169
6.2.1. BTP sector.	169
6.2.2. Industrial sector	169
6.2.3. Medical sector	170
6.2.4. General public sector	170
6.3. Inter-satellite or Earth–satellite optical communications.	171
6.3.1. Earth–satellite optical communications.	171
6.3.2. Inter-satellite optical communications	171
6.4. Free-space optical communications	173
6.4.1. Introduction – operating principles.	173
6.4.2. Characteristics	175
6.4.2.1. Principal parameters	175
6.4.2.2. Secondary parameters.	176
6.4.2.3. Examples of installed systems	176
6.4.3. Propagation times	178
6.4.4. Implementation recommendations	178
6.4.5. Legislation.	179
6.4.5.1. The organisation of regulation activities in radio communications	179
6.4.5.2. Regulation of FSO equipment	181
6.4.6. Concept of quality of service and availability	183
6.4.6.1. Geometrical attenuation concept	183
6.4.6.2. Concept of the link margin	185
6.4.6.3. Availability and quality of service	186
6.4.7. FSO potential applications	193

6.4.7.1. Geographical approach	194
6.4.7.2. Applicative approach	194
Chapter 7. Safety and Confidentiality	197
7.1. Safety	197
7.1.1. Dangers	197
7.1.2. Concept of categories	199
7.1.3. Accessible Emission Limits (AEL)	200
7.1.4. Maximum Permissible Exposures (MPE).	200
7.1.5. The NOHD calculation	201
7.1.6. Conformity to standard IEC825/EN60825	202
7.1.6.1. Class 3B	202
7.1.6.2. Class 3R	203
7.1.6.3. Class 2	203
7.1.6.4. Class 1	203
7.2. Confidentiality	203
7.2.1. Transmitted data confidentiality	203
7.2.2. Confidentiality techniques.	204
7.2.2.1. Cryptography	205
7.2.2.2. Public key and secret key cryptography	205
7.2.2.3. Quantum cryptography	206
7.2.2.4. Quantum telecommunications in free space	206
7.2.2.5. Non-encrypted links in confined space: contribution of artificial materials.	207
Bibliography	209
Index	217
