INTRODUCTION	vii
CHAPTER 1. TRANSDUCTION TECHNIQUES FOR MINIATURIZED BIOSENSORS	1
1.1. Definition of bioMEMS	1
1.2. Transduction techniques	2
1.2.1. Optical transduction	2
1.2.2. Electro (chemical) transduction	6
1.2.3. Mechanical transduction	10
1.3. MEMS transducers	17
1.4. One specific application of MEMS biosensors: detection of pathogen agents	20
1.5. Bibliography	25
CHAPTER 2. BIORECEPTORS AND GRAFTING METHODS	35
2.1. Types of bioreceptor	35
2.1.1. Catalytic receptors	36
2.1.2. Affinity receptors	37
2.1.3. Nucleic acid-based receptors	40
2.1.4. Molecularly imprinted polymers	41
2.2. Immobilization strategies	43
2.2.1. Adsorption and antifouling strategies	44
2.2.2. Entrapment methods	49
2.2.3. Covalent coupling	51
2.2.4. Other capture systems	54
2.2.5. Immobilization strategies: summary	56
2.3. Conclusion	57
2.4. Bibliography	57

CHAPTER 3. PATTERNING TECHNIQUES FOR THE BIOFUNCTIONALIZATION OF MEMS	65
3.1. What is surface patterning?	65
3.2. Direct biopatterning in liquid phase	66
3.2.1. Ink delivery by non-contact methods.	67
3.2.2. Ink delivery by contact methods.	71
3.3. Replication of patterns	80
3.3.1. Photolithography.	81
3.3.2. Light-induced patterning strategies	81
3.3.3. Microcontact printing.	82
3.3.4. In-flux functionalization	83
3.4. Conclusions.	84
3.5. Bibliography	85
CHAPTER 4. FROM MEMS TO NEMS BIOSENSORS	93
4.1. Importance of downscaling.	93
4.2. Challenges faced by NEMS for biosensing applications.	95
4.2.1. Issues related to nanomechanical transducers . . .	97
4.2.2. Issues related to the functionalization of NEMS . .	99
4.2.3. On the importance of packaging and sample preparation	103
4.3. Economic considerations	106
4.4. Bibliography	107
CHAPTER 5. COMPARING PERFORMANCES OF BIOSENSORS: IMPOSSIBLE MISSION?	113
5.1. Bibliography	117
INDEX.	119
