

## Table of Contents

<b>Foreword</b> . . . . .	xiii
<b>Chapter 1. Accounting for Plastic Strain Heterogenities in Modeling Polycrystalline Plasticity: Microstructure-based Multi-laminate Approaches</b> . . . . .	1
Patrick FRANCIOSI	
1.1. Introduction . . . . .	1
1.2. Polycrystal morphology in terms of grain and sub-grain boundaries . . . . .	2
1.2.1. Some evidence of piece-wise regularity for grain boundaries . . . . .	2
1.2.2. Characteristics of plastic-strain due to sub-grain boundaries . . . . .	3
1.3. Sub-boundaries and multi-laminate structure for heterogenous plasticity . . . . .	5
1.3.1. Effective moduli tensor and Green operator of multi-laminate structures . . . . .	6
1.3.2. Multi-laminate structures and piece-wise homogenous plasticity . . . . .	10
1.4. Application to polycrystal plasticity within the affine approximation . . . . .	10
1.4.1. Constitutive relations . . . . .	10
1.4.2. Fundamental properties for multi-laminate modeling of plasticity . . . . .	14
1.5. Conclusion . . . . .	15
1.6. Bibliography . . . . .	15
<b>Chapter 2. Discrete Dislocation Dynamics: Principles and Recent Applications</b> . . . . .	17
Marc FIVEL	
2.1. Discrete Dislocation Dynamics as a link in multiscale modeling . . . . .	17
2.2. Principle of Discrete Dislocation Dynamics . . . . .	19

2.3. Example of scale transition: from DD to Continuum Mechanics . . . . .	21
2.3.1. Introduction to a dislocation density model . . . . .	21
2.3.1.1. Constitutive equations of a dislocation based model of crystal plasticity. . . . .	22
2.3.1.2. Parameter identification . . . . .	24
2.3.1.3. Application to copper simulations . . . . .	25
2.3.1.4. Taking into account kinematic hardening. . . . .	26
2.4. Example of DD analysis: simulations of crack initiation in fatigue . . . . .	29
2.4.1. Case of single phase AISI 31GL . . . . .	29
2.5. Conclusions. . . . .	32
2.6. Bibliography . . . . .	33
<b>Chapter 3. Multiscale Modeling of Large Strain Phenomena in Polycrystalline Metals . . . . .</b>	<b>37</b>
Kaan INAL and Raj. K. MISHRA	
3.1. Implementation of polycrystal plasticity in finite element analysis . . . . .	39
3.2. Kinematics and constitutive framework . . . . .	41
3.3. Forward Euler algorithm . . . . .	44
3.4. Validation of the forward Euler algorithm. . . . .	46
3.5. Time step issues in the forward Euler scheme . . . . .	49
3.6. Comparisons of CPU times: the rate tangent versus the forward Euler methods. . . . .	51
3.7. Conclusions. . . . .	52
3.8. Acknowledgements . . . . .	52
3.9. Bibliography . . . . .	52
<b>Chapter 4. Earth Mantle Rheology Inferred from Homogenization Theories . . . . .</b>	<b>55</b>
Olivier CASTELNAU, Ricardo LEBENSOHN, Pedro Ponte CASTAÑEDA and Donna BLACKMAN	
4.1. Introduction. . . . .	55
4.2. Grain local behavior. . . . .	57
4.3. Full-field reference solutions . . . . .	59
4.4. Mean-field estimates . . . . .	62
4.4.1. Basic features of mean-field theories . . . . .	62
4.4.2. Results . . . . .	64
4.5. Concluding observations . . . . .	66
4.6. Bibliography . . . . .	68

<b>Chapter 5. Modeling Plastic Anisotropy and Strength Differential Effects in Metallic Materials</b> . . . . .	71
Oana CAZACU and Frédéric BARLAT	
5.1. Introduction. . . . .	71
5.2. Isotropic yield criteria . . . . .	72
5.2.1. Pressure insensitive materials deforming by slip . . . . .	72
5.2.2. Pressure insensitive materials deforming by twinning . . . . .	73
5.2.3. Pressure insensitive materials with non-Schmid effects . . . . .	76
5.2.4. Pressure sensitive materials . . . . .	78
5.2.5. SD effect and plastic flow. . . . .	80
5.3. Anisotropic yield criteria with SD effects . . . . .	80
5.3.1. Cazacu and Barlat [CAZ 04] orthotropic yield criterion . . . . .	80
5.3.2. Cazacu Plunkett Barlat yield criterion [CAZ 06] . . . . .	82
5.4. Modeling anisotropic hardening due to texture evolution. . . . .	83
5.5. Conclusions and future perspectives . . . . .	86
5.6. Bibliography . . . . .	87
<b>Chapter 6. Shear Bands in Steel Plates under Impact Loading</b> . . . . .	91
George Z. VOYIADJIS and Amin H. ALMASRI	
6.1. Introduction. . . . .	91
6.2. Viscoplasticity and constitutive modeling. . . . .	92
6.3. Higher order gradient theory. . . . .	97
6.4. Two-dimensional plate subjected to velocity boundary conditions . . . . .	102
6.5. Shear band in steel plate punch . . . . .	105
6.6. Conclusions. . . . .	108
6.7. Bibliography . . . . .	109
<b>Chapter 7. Viscoplastic Modeling of Anisotropic Textured Metals</b> . . . . .	111
Brian PLUNKETT and Oana CAZACU	
7.1. Introduction. . . . .	111
7.2. Anisotropic elastoviscoplastic model. . . . .	113
7.3. Application to zirconium . . . . .	115
7.3.1. Quasi-static deformation of zirconium . . . . .	115
7.3.2. High strain-rate deformation of zirconium . . . . .	120
7.4. High strain-rate deformation of tantalum . . . . .	124
7.5. Conclusions. . . . .	125
7.6. Bibliography . . . . .	126

<b>Chapter 8. Non-linear Elastic Inhomogenous Materials: Uniform Strain Fields and Exact Relations</b> . . . . .	129
Qi-Chang HE, B. BARY and Hung LE QUANG	
8.1. Introduction. . . . .	129
8.2. Locally uniform strain fields. . . . .	130
8.3. Exact relations for the effective elastic tangent moduli . . . . .	136
8.4. Cubic polycrystals. . . . .	139
8.5. Power-law fibrous composites. . . . .	144
8.6. Conclusion . . . . .	149
8.7. Bibliography . . . . .	149
<b>Chapter 9. 3D Continuous and Discrete Modeling of Bifurcations in Geomaterials</b> . . . . .	153
Florent PRUNIER, Félix DARVE, Luc SIBILLE and François NICOT	
9.1. Introduction. . . . .	153
9.2. 3D bifurcations exhibited by an incrementally non-linear constitutive relation . . . . .	155
9.2.1. Incrementally non-linear and piecewise linear relations . . . . .	155
9.2.2. 3D analysis of the second-order work with phenomenological constitutive models. . . . .	157
9.3. Discrete modeling of the failure mode related to second-order work criterion . . . . .	165
9.4. Conclusions. . . . .	173
9.5. Acknowledgements . . . . .	174
9.6. Bibliography . . . . .	174
<b>Chapter 10. Non-linear Micro-cracked Geomaterials: Anisotropic Damage and Coupling with Plasticity</b> . . . . .	177
Djimédo KONDO, Qizhi ZHU, Vincent MONCHIET and Jian-Fu SHAO	
10.1. Introduction . . . . .	177
10.2. Anisotropic elastic damage model with unilateral effects . . . . .	179
10.2.1. Homogenization of elastic micro-cracked media . . . . .	179
10.2.1.1. Micromechanics of media with random microstructure . . . . .	179
10.2.1.2. Application to micro-cracked media . . . . .	180
10.2.2. Micro-crack closure condition and damage evolution. . . . .	181
10.2.2.1. Micro-crack closure effects and unilateral damage . . . . .	181
10.2.2.2. Damage criterion and evolution law . . . . .	182
10.2.3. Non-local micromechanics-based damage model . . . . .	183
10.2.4. Application of the model. . . . .	184
10.2.4.1. Uniaxial tensile tests . . . . .	184

10.2.4.2. Predictions of the anisotropic damage model for William's test . . . . .	185
10.2.4.3. Numerical analysis of Hassanzadeh's direct tension test . . . . .	188
10.3. A new model for ductile micro-cracked materials . . . . .	188
10.3.1. Introductory observations . . . . .	188
10.3.2. Basic concepts and methodology of the limit analysis approach . . . . .	190
10.3.2.1. Representative volume element with oblate voids . . . . .	190
10.3.2.2. The Eshelby-like velocity field . . . . .	191
10.3.3. Determination of the macroscopic yield surface . . . . .	192
10.3.3.1. The question of the boundary conditions . . . . .	192
10.3.3.2. Principle of the determination of the yield function . . . . .	193
10.3.3.3. Closed form expression of the macroscopic yield function . . . . .	193
10.3.4. The particular case of penny-shaped cracks . . . . .	195
10.4. Conclusions . . . . .	197
10.5. Acknowledgement . . . . .	198
10.6. Appendix . . . . .	198
10.7. Bibliography . . . . .	198
<b>Chapter 11. Bifurcation in Granular Materials: A Multiscale Approach</b> . . . . .	203
François NICOT, Luc SIBILLE and Félix DARVE	
11.1. Introduction . . . . .	203
11.2. Microstructural origin of the vanishing of the second-order work . . . . .	205
11.2.1. The micro-directional model . . . . .	205
11.2.2. Microstructural expression of the macroscopic second-order work . . . . .	206
11.2.3. From micro to macro second-order work . . . . .	208
11.2.4. Micromechanical analysis of the vanishing of the second-order work . . . . .	210
11.3. Some remarks on the basic micro-macro relation for the second-order work . . . . .	212
11.4. Conclusion . . . . .	213
11.5. Bibliography . . . . .	214
<b>Chapter 12. Direct Scale Transition Approach for Highly-filled Viscohyperelastic Particulate Composites: Computational Study</b> . . . . .	215
Carole NADOT-MARTIN, Marion TOUBOUL, André DRAGON and Alain FANGET	
12.1. Morphological approach in the finite strain framework . . . . .	216
12.1.1. Geometric schematization . . . . .	216
12.1.2. Localization-homogenization problem . . . . .	217
12.1.2.1. Principal tools and stages . . . . .	217

12.1.2.2. Solving procedure . . . . .	219
12.2. Evaluation involving FEM/MA confrontations . . . . .	221
12.2.1. Material geometry, relative representations . . . . .	221
12.2.2. Loading paths, methodology of analysis . . . . .	223
12.2.3. MA estimates compared to FEM results for hyperelastic constituents . . . . .	225
12.2.4. Evaluation involving viscohyperelastic behavior of the matrix . . . . .	229
12.3. Conclusions and prospects . . . . .	232
12.4. Bibliography . . . . .	234
<b>Chapter 13. A Modified Incremental Homogenization Approach for Non-linear Behaviors of Heterogenous Cohesive Geomaterials.</b> . . . . .	237
Ariane ABOU-CHAKRA GUÉRY, Fabrice CORMERY, Jian-Fu SHAO and Djimédo KONDO	
13.1. Introduction . . . . .	237
13.2. Experimental observations on the Callovo-Oxfordian argillite behavior . . . . .	238
13.2.1. Microstructure and mineralogical composition of the material . . . . .	238
13.2.2. Brief summary of the macroscopic behavior of the material . . . . .	239
13.3. Incremental formulation of the homogenized constitutive relation . . . . .	240
13.3.1. Introduction . . . . .	240
13.3.2. Limitations of Hill's incremental method . . . . .	242
13.3.3. Modified Hill's incremental method . . . . .	243
13.4. Modifying of the local constituents' behaviors . . . . .	244
13.4.1. Elastoplastic behavior of the clay phase . . . . .	244
13.4.2. Elastic unilateral damage behavior of the calcite phase . . . . .	245
13.5. Implementation and numerical validation of the model . . . . .	247
13.5.1. Local integration of the micromechanical model . . . . .	247
13.5.2. Comparison with unit cell (finite element) calculation . . . . .	248
13.6. Calibration and experimental validations of the modified incremental micromechanical model . . . . .	248
13.7. Conclusions . . . . .	249
13.8. Acknowledgement . . . . .	251
13.9. Bibliography . . . . .	251
<b>Chapter 14. Meso- to Macro-scale Probability Aspects for Size Effects and Heterogenous Materials Failure</b> . . . . .	253
Jean-Baptiste COLLIAT, Martin HAUTEFEUILLE and Adnan IBRAHIMBEOVIC	
14.1. Introduction . . . . .	253
14.2. Meso-scale deterministic model . . . . .	254
14.2.1. Structured meshes and kinematic enhancements . . . . .	255
14.2.2. Operator split solution for interface failure . . . . .	257

14.2.3. Comparison between structured and unstructured mesh approach . . . . .	258
14.3. Probability aspects of inelastic localized failure for heterogeneous materials . . . . .	259
14.3.1. Meso-scale geometry description. . . . .	260
14.3.2. Stochastic integration. . . . .	261
14.4. Results of the probabilistic characterization of the two phase material . . . . .	263
14.4.1. Determination of SRVE size . . . . .	263
14.4.2. Numerical results and discussion . . . . .	264
14.5. Size effect modeling . . . . .	266
14.5.1. Random fields and the Karhunen-Loeve expansion . . . . .	267
14.5.2. Size effect and correlation length. . . . .	269
14.6. Conclusion . . . . .	271
14.7. Acknowledgments . . . . .	272
14.8. Bibliography . . . . .	272
<b>Chapter 15. Damage and Permeability in Quasi-brittle Materials: from Diffuse to Localized Properties</b> . . . . .	277
Gilles PIJAUDIER-CABOT, Frédéric DUFOUR and Marta CHOINSKA	
15.1. Introduction . . . . .	277
15.2. Mechanical problem – continuum damage modeling . . . . .	279
15.3. Permeability matching law . . . . .	281
15.3.1. Diffuse damage . . . . .	281
15.3.2. Localized damage – crack opening versus permeability . . . . .	281
15.3.3. Matching law . . . . .	283
15.4. Calculation of a crack opening in continuum damage calculations . . . . .	283
15.5. Structural simulations . . . . .	286
15.5.1. Mechanical problem – Brazilian splitting test . . . . .	287
15.5.2. Evolution of apparent permeability . . . . .	289
15.6. Conclusions . . . . .	291
15.7. Acknowledgement . . . . .	291
15.8. Bibliography . . . . .	291
<b>Chapter 16. A Multiscale Modeling of Granular Materials with Surface Energy Forces</b> . . . . .	293
Pierre-Yves HICHER and Ching S. CHANG	
16.1. Introduction . . . . .	293
16.2. Stress-strain model. . . . .	294
16.2.1. Inter-particle behavior . . . . .	296
16.2.1.1. Elastic part . . . . .	296
16.2.1.2. Plastic part . . . . .	296

16.2.1.3. Interlocking influence . . . . .	297
16.2.1.4. Elastoplastic force-displacement relationship . . . . .	298
16.2.2. Stress-strain relationship . . . . .	298
16.2.2.1. Micro-macro relationship . . . . .	298
16.2.2.2. Calculation scheme . . . . .	300
16.2.3. Summary of parameters . . . . .	301
16.3. Results of numerical simulation without surface energy forces consideration. . . . .	302
16.4. Granular material with surface energy forces: the example of lunar soil . . . . .	306
16.4.1. Van der Waals forces . . . . .	308
16.4.2. Triaxial tests with consideration of surface energy forces . . . . .	311
16.5. Summary and conclusion . . . . .	314
16.6. Bibliography . . . . .	315
<b>Chapter 17. Length Scales in Mechanics of Granular Solids . . . . .</b>	<b>319</b>
Farhang RADJAI	
17.1. Introduction . . . . .	319
17.2. Model description . . . . .	320
17.3. Force chains . . . . .	321
17.3.1. Probability density functions . . . . .	321
17.3.2. Bimodal character of stress transmission . . . . .	322
17.3.3. Spatial correlations . . . . .	324
17.4. Fluctuating particle displacements . . . . .	325
17.4.1. Uniform strain and fluctuations . . . . .	325
17.4.2. Scale-dependent pdfs . . . . .	326
17.4.3. Spatial correlations . . . . .	328
17.4.4. Granulence . . . . .	329
17.5. Friction mobilization . . . . .	330
17.5.1. Critical contacts . . . . .	330
17.5.2. Evolution of critical contacts . . . . .	330
17.5.3. Spatial correlations . . . . .	331
17.6. Conclusion . . . . .	332
17.7. Acknowledgements . . . . .	333
17.8. Bibliography . . . . .	333
<b>List of Authors . . . . .</b>	<b>337</b>
<b>Index . . . . .</b>	<b>341</b>
