Introduction	xi
Chapter 1. The Fabrication of Micro- and Nanostructures	1
1.1. The fabrication of advanced interconnect structures in microelectronic devices	1
1.1.1. Ultralarge-scale integration	2
1.1.2. The damascene architecture	3
1.1.3. 3D integration	7
1.2. Elaboration of metallic NPs	8
1.3. Conclusions	12
Chapter 2. Phase Transition: Nucleation, Growth, Aggregation and Coalescence	13
2.1. What is the easiest path for a phase transition?	13
2.1.1. Gibbs energy of a homogeneous phase	13
2.1.2. The driving force: supersaturation	14
2.1.3. The resistance force: the energetic barrier	15
2.1.4. Nucleus, subnucleus and supernucleus	16
2.1.5. Phase transition: a step-by-step transformation	18
2.2. Nucleation	18
2.2.1. General equations for nucleation	19
2.2.2. Equilibrium (under non-equilibrium conditions)	21
2.2.3. Nucleation rate	25
2.2.4. Stationary nucleation	26

2.2.5. Classical description of clusters: the capillarity approximation	27
2.2.6. Time-dependent nucleation	39
2.2.7. Limitations of the classical theory of nucleation	42
2.3. Growth	43
2.3.1. Attachment of monomers	44
2.3.2. Crystal growth	45
2.4. Aggregation	47
2.4.1. General equations for phase transformation	48
2.4.2. Aggregative growth	50
2.5. Coalescence	51
2.5.1. The Johnson–Mehl–Avrami–Kolmogorov equation	51
2.5.2. Exclusion zones	55
2.6. Conclusions	57
Chapter 3. The Precipitation of Metals: Thin Film Electroplating and Nanoparticle Synthesis	59
3.1. Principles of metal electroplating	59
3.1.1. Thermodynamic considerations	60
3.1.2. Kinetics of electroplating and Faraday’s Law	65
3.1.3. Electrochemical response of nucleation phenomena	66
3.2. Chemical synthesis of metallic nanoparticles	67
3.2.1. Mechanism of formation: the Lamer model	67
3.2.2. Mechanisms of stabilization	69
3.3. Conclusions	70
Chapter 4. Copper Electroplating: from Superconformal to Extreme Fill	71
4.1. Copper electroplating	71
4.1.1. Specificities of Cu electroplating	71
4.1.2. Is electroplating capable of filling cavities?	72
4.2. Superconformal fill of damascene trenches	73
4.2.1. The electrolytes for superconformal Cu electroplating	73
4.2.2. Suppressor and accelerator: an electrochemical study	74
4.2.3. The mechanism of superconformal fill	83
4.3. Extreme fill of TSVs	92
4.3.1. Is it easier to fill large TSVs than small damascene structures?	93
4.3.2. Mass transport within TSVs and depletion of Cu^{2+} ions	93
4.3.3. Electrolytes for TSV fill	96

4.3.4. Electrochemical study of an electrolyte capable of extreme fill	99
4.3.5. The mechanism of extreme fill	102
4.4. Conclusions	105
Chapter 5. Nucleation and Growth of Metallic Thin Films	107
5.1. Seed layer enhancement	107
5.1.1. Electroplating copper seed layers: which electrolyte?	107
5.1.2. First implementation of the SLE process in shallow TSVs	110
5.1.3. Nucleation of seed layer enhancement (SLE) on resistive barrier materials	111
5.1.4. Enhancement of nucleation density on resistive barriers	112
5.1.5. Integration of the SLE process	116
5.2. Electroless deposition of self-aligned metallic barriers	119
5.2.1. Why would aligned metallic barriers be needed?	119
5.2.2. Principles of electroless deposition	121
5.2.3. Experimental conditions for electroless deposition	125
5.2.4. Deposition kinetics and film composition	127
5.2.5. Local thickness variations	129
5.2.6. Factors influencing the nucleation of CoWP and CoWB	130
5.2.7. Undesired, parasitic nucleation of CoWP and CoWB	134
5.2.8. Improvement of EM resistance	138
5.3. Conclusions	142
Chapter 6. Nucleation and Stabilization of Metallic Nanoparticles in Ionic Liquids	143
6.1. What are ionic liquids?	143
6.2. Chemical synthesis of metallic NPs in ILs	146
6.2.1. Synthesis of Cu-NPs	148
6.2.2. Synthesis of Ta-NPs	149
6.3. Interactions between ILs and NPs	151
6.3.1. Viscous stabilization	151
6.3.2. Electrostatic interactions	152
6.3.3. Adsorption of ions	153
6.3.4. Impact of these interactions on nucleation, growth and aggregation	155

6.4. Size evolution of Ru-NPs	156
6.4.1. Conventional size control	156
6.4.2. Unconventional size control	160
6.5. Conclusions	163
Appendices	165
Appendix 1. Demonstration of the General Expression for the Nucleation Rate	167
Appendix 2. Stationary Cluster Population and Nucleation Rate	169
Appendix 3. Where is the Surface of the Cluster?	173
Glossary	175
List of Acronyms	179
Bibliography	183
Index	193
