Foreword	ix
Ivan MARUSIC	
Introduction	xi
Chapter 1. Basic Concepts	1
1.1. Introduction	1
1.2. Fundamental equations	1
1.2.1. Euler equations	2
1.3. Notation	4
1.4. Reynolds averaged Navier-Stokes equations	4
1.5. Basic concepts of turbulent transport mechanisms	6
1.5.1. Turbulent energy transport	6
1.5.2. Inter-component transport	8
1.6. Correlation tensor dynamics	11
1.7. Homogeneous turbulence	15
1.8. Isotropic homogeneous turbulence	20
1.9. Axisymmetric homogeneous turbulence	33
1.10. Turbulence scales	35
1.11. Taylor hypothesis	39
1.12. Approaches to modeling wall turbulence	40
1.12.1. Direct numerical simulations	40
1.12.2. Measurements	41
Chapter 2. Preliminary Concepts: Phenomenology, Closures and Fine Structure	45
2.1. Introduction	45
2.2. Hydrodynamic stability and origins of wall turbulence	46

2.2.1. Linear stability	46
2.2.2. Secondary stability, non-linearity and bypass transition	48
2.3. Reynolds equations in internal turbulent flows	55
2.4. Scales in turbulent wall flow.	55
2.5. Eddy viscosity closures.	56
2.6. Exact equations for fully developed channel flow	61
2.6.1. Shear stress field	61
2.6.2. Friction coefficient	63
2.6.3. “Laminar/turbulent” decomposition	64
2.7. Algebraic closures for the mixing length in internal flows	65
2.8. Some illustrations using direct numerical simulations at low Reynolds numbers	69
2.8.1. Turbulent intensities	69
2.8.2. Fine structure	70
2.8.3. Transport of turbulent kinetic energy and reformulation of the logarithmic sublayer	72
2.8.4. Transport of the Reynolds shear stress $-\overline{uv}$	74
2.9. Transition to turbulence in a boundary layer on a flat plate	76
2.10. Equations for the turbulent boundary layer	77
2.11. Mean vorticity	81
2.12. Integral equations	83
2.13. Scales in a turbulent boundary layer	85
2.14. Power law distributions and simplified integral approach.	85
2.15. Outer layer	88
2.16. Izakson-Millikan-von Mises overlap	89
2.17. Integral quantities	91
2.18. Wake region.	94
2.19. Drag coefficient in external turbulent flows.	96
2.20. Asymptotic behavior close to the wall	98
2.21. Coherent wall structures – a brief introduction	101
Chapter 3. Inner and Outer Scales: Spectral Behavior	105
3.1. Introduction.	105
3.2. Townsend-Perry analysis in the fully-developed turbulent sublayer.	107
3.3. Spectral densities	110
3.3.1. Longitudinal fluctuating velocity	110
3.3.2. Spanwise fluctuating velocity.	118
3.3.3. Fluctuating wall-normal velocity.	119
3.3.4. Reynolds shear stress.	121
3.3.5. Summary: active and passive structures.	123
3.4. Clues to the k_x^{-1} behavior, and discussion	124

3.5. Spectral density E_{vv} and cospectral density E_{uv}	129
3.6. Two-dimensional spectral densities	131
Chapter 4. Reynolds Number-Based Effects	137
4.1. Introduction.	137
4.2. The von Karman constant and the renormalization group	140
4.2.1. Renormalization group (RNG)	140
4.2.2. The von Karman constant derived from the RNG.	141
4.3. Complete and incomplete similarity	146
4.3.1. General considerations. Power law distributions	146
4.3.2. Implications for mixing length	154
4.4. Symmetries and their consequences	155
4.4.1. Lie symmetries	155
4.4.2. Application to wall turbulence	157
4.5. Principle of asymptotic invariance. Approach of W.K. George	163
4.5.1. Internal flows	163
4.5.2. External (boundary-layer) flows	178
4.6. Mean velocity distribution. Summary	185
4.7. Townsend's attached eddies	185
4.7.1. Concept of attached eddies	185
4.7.2. Cross-correlations	185
4.7.3. Mean shear.	192
4.7.4. Generalization. Correspondence between constants and the Coles parameter.	193
4.7.5. Spectral compatibility. Generalization	196
4.7.6. Generalization for the intensity of longitudinal velocity fluctuations	197
4.7.7. Turbulent intensity of spanwise velocity fluctuations	203
4.7.8. Turbulent intensity of wall-normal fluctuations	210
4.7.9. Reynolds shear stress $-\overline{uv}$	215
4.8. Overlap region in internal flows	228
4.9. Two-point correlations	230
4.9.1. Symmetries of two-point correlations	230
4.9.2. Comparison with experimental results	234
4.10. Active and passive Townsend eddies	239
4.10.1. Decomposition and scales	240
4.10.2. Effects of wall-layer (active) structures and outer-layer (passive) structures on wall dynamics	245
4.11. Fine structure	249

Chapter 5. Vorticity	259
5.1. Introduction.	259
5.2. General characteristics of vorticity	259
5.3. Reynolds shear stress and vorticity transport	261
5.4. Characteristics of the vorticity field close to a wall	264
5.5. Statistics and fine structure.	270
5.6. Vorticity transport	277
5.6.1. Mean vorticity.	277
5.6.2. Transport of vorticity and enstrophy correlation terms	279
5.7. Estimating the importance of non-linearity close to the wall.	284
5.8. Measurements	287
Notations Used	291
Subscripts and superscripts	293
Greek letters	294
Abbreviations	295
Bibliography	297
Index	309
