<b>Preface</b> . . . . .	ix
<b>Chapter 1. Building a Model for a Coupled Problem</b> . . . . .	1
1.1. Basic equations of the models (Appendix 1) . . . . .	2
1.2. Boundary layers . . . . .	3
1.2.1. Forced convection . . . . .	4
1.2.2. Natural convection . . . . .	6
1.3. Heat balance for a “system” and boundary conditions . . . . .	8
1.4. On the problem of cooling of a cup of tea . . . . .	11
1.4.1. Balance equations. . . . .	12
1.4.2. Research of transfer correlations . . . . .	13
1.4.3. Surface temperature as a function of average temperature of the liquid . . . . .	15
1.4.4. Liquid temperature as a function of time . . . . .	16
1.5. Bather on a beach . . . . .	19
<b>Chapter 2. Approximate Determination of Transfer Coefficients</b> . . . . .	25
2.1. Natural convection around an isolated sphere. . . . .	25
2.1.1. Equations of boundary layers depending on velocity and temperature . . . . .	26
2.1.2. Integration over the boundary layer thickness . . . . .	28
2.1.3. Dimensionless formulation . . . . .	32
2.1.4. Numerical solution . . . . .	33
2.2. Coupled exchanges around the head of a baby lying down. . . . .	37
2.2.1. System of equations . . . . .	38

2.2.2. Boundary layers for the horizontal disk . . . . .	40
2.2.3. Boundary layers on curved surfaces . . . . .	41
2.3. Forced convection around a cylinder . . . . .	43
2.3.1. System of equations . . . . .	44
2.3.2. Integration of the equations of the dynamic boundary layer . . . . .	46
2.3.3. Dimensionless integral equation . . . . .	48
2.3.4. Resolution of the upwind dynamic boundary layer . . . . .	50
2.3.5. Resolution of the downwind dynamic boundary layer . . . . .	55
2.3.6. Resolution of the thermal boundary layer . . . . .	56
<b>Chapter 3. Human Thermal Models . . . . .</b>	<b>61</b>
3.1. The Fanger model: from climatic chamber to standard . . . . .	61
3.1.1. Environment and human body physical parameters . . . . .	62
3.1.2. Equilibrium balance equation in the Fanger model . . . . .	69
3.1.3. Examples of ambient environment qualifications . . . . .	72
3.2. Gagge model . . . . .	76
3.2.1. A simple, unsteady and regulated geometrical model . . . . .	76
3.2.2. Response of “human system” to a sudden change in metabolism . . . . .	78
3.3. Stolwijk 25 node model . . . . .	80
3.4. Thermal model of a baby lying down . . . . .	82
3.4.1. Geometrical division . . . . .	82
3.4.2. Metabolism and respiration . . . . .	83
3.4.3. Exchanges of the uncovered part of the head . . . . .	84
3.4.4. Conduction between body layers . . . . .	85
3.4.5. Sensible heat exchanges of the trunk . . . . .	87
3.4.6. Trunk evaporation . . . . .	88
3.4.7. Blood convection . . . . .	89
3.4.8. System of equations . . . . .	90
3.4.9. Simulation results . . . . .	91
<b>Chapter 4. Heat and Humidity Transfer in Clothing . . . . .</b>	<b>97</b>
4.1. From heterogeneous porous to continuous model media . . . . .	98
4.2. Heat diffusion and convection . . . . .	100
4.3. Vapor diffusion . . . . .	101
4.4. The effect of bound water . . . . .	105
4.5. Liquid water diffusion . . . . .	111
4.6. Mass and energy balances . . . . .	119
4.7. Limit conditions . . . . .	121

---

4.8. Processing for a numerical resolution . . . . .	123
4.9. First example: condensation in a multilayer. . . . .	124
4.10. Convection and diffusion . . . . .	128
4.11. Taking account of radiation . . . . .	130
4.12. Second example: firefighters' clothing . . . . .	135
4.13. Traditional warm weather clothing . . . . .	137
<b>Appendices</b> . . . . .	143
<b>Appendix 1</b> . . . . .	145
<b>Appendix 2</b> . . . . .	151
<b>Appendix 3</b> . . . . .	155
<b>Bibliography</b> . . . . .	157
<b>Index</b> . . . . .	161
