Preface	ix
Part 1. Theory of Systemic Modeling of the Pedostructure within the Hierarchical Hydrofunctional Organization of the Natural Environment	1
Chapter 1. Introduction to Part 1	5
Chapter 2. Inherent Problems of Soil Science	9
2.1. History of pedology	9
2.2. Modeling of water transfers in the soil: supremacy of pedotransfer functions	11
2.3. Absence of a unitary theory of the description of soil	12
Chapter 3. The Systemic Approach Applied to Pedology	17
3.1. The Bertalanffy project and Le Moigne's general system model	17
3.1.1. The general system theory and Cartesian precepts	17
3.1.2. Systemic representation: Le Moigne's two great ideas	22
3.2. The systemic description of the soil organization	25
3.2.1. Physical definition of a "system"	25
3.2.2. Graduation of spatial axes: the systemic description of soil	28
3.2.3. Systemic modeling of the operating system (OS) on axis III	32

3.2.4. The “Structural Representative Elementary Volume” (SREV) concept required for the systemic description of the pedon	35
3.3. Systemic physics of the organized soil medium defined on axis III	39
3.3.1. The thermodynamic system of the pedostructure	39
3.3.2. Equations of the hydrostructural equilibrium of the pedostructure	41
3.3.3. Determining hydrostructural soil parameters.	44
3.3.4. Equations of the hydrodynamic functioning of the pedostructure	45
3.3.5. The Kamel® model of the hydrostructural functioning of a pedon.	50
3.4. Systemic mapping of soil in the landscape	54
3.4.1. Hierarchical hydrofunctional mapping units of the landscape	54
3.4.2. The SIRS-Soils	57
Chapter 4. The General System (GS): General Model of Scientific Disciplines Related to the Study and Management of Natural Areas	59
4.1. The human system, system of study or management of a natural area, isomorphic to the general system.	59
4.2. Natural systems, OSs of the GS	61
4.3. Information systems of human systems implemented for the study or management of natural systems	62
4.4. Hydrostructural pedology and its own spatial reference information system: the SIRS-Soils	64
Chapter 5. Emergence of a New Scientific Discipline: Hydrostructural Pedology	67
5.1. Where hydrostructural pedology fits into the natural sciences	67
5.2. Specificity of the hydrostructural pedology laboratory	70
5.2.1. Hydrostructural characterization of the pedostructure	70
5.2.2. Experimental analysis of the bio-soil association in the soil column	72
5.2.3. Simulation of processes at the scale of the pedon using a lysimeter.	72

Chapter 6. Implications for Agro-environmental Sciences	75
6.1. A unitary theory on the systemic and thermodynamic approaches within the natural environment	75
6.1.1. Modeling in the natural environment and Cartesian precepts	75
6.1.2. Systematization, theoretical basis of the systemic approach	79
6.1.3. Theoretical and applied systemology	81
6.1.4. General Systems theory of the agro-environmental disciplines.	86
6.1.5. Systemic thermodynamics.	88
6.2. The new challenge to agro-environmental modeling	92
Part 2. Hydrostructural Characterization of Soil Pedostructure	95
Chapter 7. Introduction to Part 2	99
Chapter 8. Theoretical Recall	103
8.1. Pinpointing the problem	103
8.2. Modeling micro- and macro-water types by the shrinkage curve	104
8.3. New principle for determining the micro-and macro-water types using the retention curve	107
8.3.1. Micro/macro thermodynamic and hydrostructural equilibrium	107
8.3.2. Equations for the retention curve.	108
8.3.3. Equations for the pF curve	112
8.3.4. Equations for the shrinkage curve	114
8.3.5. Equations for hydric conductivity	117
Chapter 9. Methods for Determining the Characteristic Parameters	123
9.1. Soil water retention curve “WRC”	123
9.1.1. Measured using the tensiometer (suction-based method).	123
9.1.2. Measured under air pressure on the porous plate press (pressure-based method), extending the WRC measurement beyond the 1,000 hPa tensiometric limit	131

9.2. The shrinkage curve	135
9.2.1. Case of non-sigmoidal shrinkage curves	135
9.2.2. Case of the sigmoidal shrinkage curves	144
9.3. The hydric conductivity curve of the pedostructure	149
9.3.1. Description of the Excel sheets	149
9.3.2. Procedure.	152
9.3.3. Results	153
Conclusion	157
Bibliography	159
Index	165
