Preface	ix
Notations and Abbreviations	xi
Chapter 1. Reliability of Engineering Systems	1
1.1. Basic notions and characteristics of reliability	1
1.1.1. Basic notions	1
1.1.2. Reliability of non-renewable units	3
1.1.3. Some parametric families of continuous distributions of non-negative random variables	7
1.1.4. Examples	21
1.1.5. Exercises	23
1.2. Reliability of renewable systems	24
1.2.1. Reliability of instantaneously renewable articles	24
1.2.2. Renewal function	30
1.2.3. Age and residual lifetime of an article	34
1.2.4. Reliability characteristics with regard to replacement time	37
1.2.5. Examples	38
1.2.6. Exercises	43
1.3. Statistical analysis of reliability characteristics	44
1.3.1. Introductory notes	44
1.3.2. Observations and the plans of reliability trials	45
1.3.3. Statistical analysis of reliability characteristics for trials under the basic plan	46

1.3.4. Statistical estimation of the reliability characteristics and indexes for trials with renewable units	50
1.3.5. Examples	52
1.3.6. Exercises	54
1.4. Structural reliability	54
1.4.1. System structure function	55
1.4.2. Monotone structures	57
1.4.3. Reliability of monotone systems from independent elements	61
1.4.4. Reliability function for monotone structures	63
1.4.5. Exercises	64
1.5. System life tree and its structure function	68
1.5.1. Event tree	68
1.5.2. An object structure scheme	69
1.5.3. An example: the auto engine structure scheme	71
1.5.4. Life tree and the system structure function	72
1.5.5. Calculation of the system reliability	76
1.5.6. System reliability function calculation	79
1.6. Non-renewable redundant systems	82
1.6.1. Basic redundancy means – terms	82
1.6.2. Hot redundancy	84
1.6.3. Cold redundancy	85
1.6.4. Markov process for system reliability investigations	86
1.6.5. Reliability properties of redundant systems	90
1.6.6. A unit warranty operating time calculation	95
1.6.7. Exercises	96
1.7. Renewable redundant systems	97
1.7.1. The model	97
1.7.2. Equations for probabilities of the system states	99
1.7.3. Steady state probabilities: system failure probability	100
1.7.4. Reliability function for renewable systems	101
1.7.5. Exercises	105
1.8. Bibliographical comments	108
1.8.1. Section 1.1	108
1.8.2. Section 1.2	108
1.8.3. Section 1.3	108
1.8.4. Section 1.4	108
1.8.5. Section 1.5	109
1.8.6. Sections 1.6 and 1.7	109

Chapter 2. Reliability and Risk	111
2.1. Risk: notion and measurement	111
2.1.1. Introductory notes	111
2.1.2. Examples	112
2.1.3. Risk notion	114
2.1.4. Risk measurement	115
2.1.5. Risk modeling	118
2.1.6. Exercises	120
2.2. Models of damage value	120
2.2.1. Introductory remarks	120
2.2.2. Simple damage models	121
2.2.3. Compound damages. Methods of investigation	125
2.2.4. Moments of compound damages	130
2.2.5. Models of compound damages	132
2.2.6. Examples	136
2.2.7. Exercises	137
2.3. Methods of risk analysis	137
2.3.1. Introductory remarks	137
2.3.2. Methodology of risk analysis	138
2.3.3. Risk tree construction	139
2.3.4. Risk tree rigging	143
2.3.5. Risk tree analysis	144
2.3.6. Exercise	157
2.4. Bibliographical comments	158
2.4.1. Section 2.1	158
2.4.2. Section 2.2	158
2.4.3. Section 2.3	158
Chapter 3. Risk Management	159
3.1. Insurance of risks and risk of insurance	159
3.1.1. Introductory remarks	159
3.1.2. Basic notions	159
3.1.3. Risk insurance models	161
3.1.4. Basic risk insurance problems	162
3.1.5. Examples	163
3.1.6. Exercises	167
3.2. Some notions and methods of financial mathematics	168
3.2.1. Principal notion of financial mathematics	168

3.2.2. Simple interests	170
3.2.3. Compound interests	172
3.2.4. Cash flows and the financial rents	174
3.2.5. Exercises	177
3.3. Short-time insurance model investigation	179
3.3.1. Introductory remarks	179
3.3.2. Calculation of the individual claim indexes	180
3.3.3. Exact calculation of summary claim characteristics	182
3.3.4. Normal asymptotic of summary claim distribution	183
3.3.5. Poisson asymptotic of summary claim distribution	184
3.3.6. Calculation of insurance basic characteristics	185
3.3.7. Exercises	187
3.4. Long-time insurance model investigation	188
3.4.1. Introductory remarks	188
3.4.2. The basic parameters of long-time insurance contracts	189
3.4.3. Insurance annuity analysis	190
3.4.4. The net-premium calculation	192
3.4.5. Insurance load calculation	193
3.4.6. An example	195
3.4.7. Exercises	198
3.5. Bibliographical comments	198
3.5.1. Section 3.1	198
3.5.2. Section 3.2	198
3.5.3. Sections 3.3 and 3.4	198
Appendices	199
Appendix 1	201
Appendix 2	203
Bibliography	207
Index	209
