<b>Preface</b> . . . . .	ix
<b>Chapter 1. Mixed Finite Elements for the Stokes Equations</b> . . . . .	1
1.1. Stokes equations . . . . .	1
1.2. Existence and uniqueness for an abstract mixed problem . . . . .	4
1.3. Existence and uniqueness for the Stokes equations . . . . .	10
1.4. Finite element approximation of an abstract mixed problem . . . . .	14
1.5. Mixed finite elements for the Stokes equations . . . . .	20
1.6. Boundary conditions for the Stokes equations . . . . .	30
1.6.1. Non-homogeneous Dirichlet condition . . . . .	30
1.6.2. Non-homogeneous Neumann condition . . . . .	32
1.6.3. Slip condition . . . . .	34
1.7. Numerical tests . . . . .	36
1.7.1. Homogeneous Dirichlet condition with exact solution . . . . .	37
1.7.2. Neumann condition . . . . .	42
1.7.3. Slip condition: flow in a quarter disc . . . . .	42
<b>Chapter 2. Numerical Schemes for the Navier-Stokes Equations</b> . . . . .	45
2.1. Navier-Stokes equations . . . . .	45
2.1.1. Mixed weak formulation . . . . .	47

2.2. Implicit Euler scheme, semi-implicit treatment of the nonlinear term . . . . .	48
2.2.1. Implicit Euler scheme and semi-implicit treatment of the nonlinear term . . . . .	49
2.2.2. And the pressure? . . . . .	52
2.2.3. Spatial discretization by finite elements . . . . .	53
2.3. Implicit Euler scheme and implicit treatment of the nonlinear term . . . . .	55
2.4. Implicit Euler scheme and explicit treatment of the nonlinear term . . . . .	56
2.5. Some properties of the trilinear forms $c$ and $\tilde{c}$ . . . . .	65
2.6. Numerical tests: flow around a disc . . . . .	69
2.6.1. Semi-implicit treatment of the nonlinear term . . . . .	71
2.6.2. Implicit treatment of the nonlinear term . . . . .	72
2.6.3. Explicit treatment of the nonlinear term . . . . .	74
<b>Chapter 3. The ALE Method for Navier-Stokes Equations in a Moving Domain . . . . .</b>	<b>79</b>
3.1. Lagrangian and Eulerian coordinates . . . . .	79
3.2. Arbitrary Lagrangian Eulerian (ALE) coordinates . . . . .	84
3.2.1. Construction of an ALE map by harmonic extension . . . . .	86
3.2.2. Construction of an explicit ALE map . . . . .	87
3.3. Weak non-conservative and conservative formulations . . . . .	89
3.3.1. Weak non-conservative formulation . . . . .	91
3.3.2. Weak conservative formulation . . . . .	93
3.4. Discretization of order one in time for the weak conservative formulation . . . . .	94
3.4.1. A scheme of order one in time for the conservative formulation . . . . .	98
3.4.2. Geometric conservation law . . . . .	99
3.5. Stabilized discretization of order one in time for the non-conservative formulation . . . . .	101
3.6. Finite element discretization in space . . . . .	104
3.7. Numerical tests . . . . .	105

<b>Chapter 4. Linear Elastodynamics</b> . . . . .	111
4.1. Two-dimensional linear elasticity . . . . .	111
4.1.1. The system of partial differential equations . . . . .	111
4.1.2. Variational formulation . . . . .	113
4.2. Abstract formulation . . . . .	113
4.3. Backward Euler scheme . . . . .	115
4.4. Implicit centered scheme . . . . .	120
4.5. Mid-point scheme . . . . .	125
4.6. Numerical tests . . . . .	129
<b>Chapter 5. Nonlinear Elastodynamics</b> . . . . .	133
5.1. Total Lagrangian formulation . . . . .	133
5.1.1. Strong total Lagrangian formulation . . . . .	136
5.1.2. Weak total Lagrangian formulation . . . . .	136
5.2. The St Venant-Kirchhoff model . . . . .	137
5.3. Total Lagrangian backward Euler scheme . . . . .	138
5.3.1. Newton's method . . . . .	139
5.4. Total Lagrangian mid-point scheme . . . . .	139
5.5. Numerical tests . . . . .	144
<b>Chapter 6. Numerical Schemes for the Fluid-Structure Interaction</b> . . . . .	147
6.1. Non-conservative and conservative weak formulations . . . . .	147
6.1.1. Weak non-conservative formulation . . . . .	151
6.1.2. Conservative weak formulation . . . . .	153
6.2. Discretization in time of the conservative form: implicit domain calculation . . . . .	155
6.2.1. Scheme discretized in time for the conservative form . . . . .	156
6.3. Discretization in time of the non-conservative form: explicit domain calculation . . . . .	164
6.4. Coupling strategies . . . . .	173
6.4.1. Fixed-point algorithm with relaxation: implicit domain calculation . . . . .	173

6.4.2. Fixed-point algorithm with relaxation: explicit domain calculation . . . . .	175
6.5. The constants in the Poincaré, Korn and trace inequalities . . . . .	176
6.6. Numerical tests . . . . .	181
6.6.1. Implicit domain calculation . . . . .	182
<b>Appendix</b> . . . . .	185
<b>Bibliography</b> . . . . .	193
<b>Index</b> . . . . .	197
