Table of Contents

Preface xi

Chapter 1. Concepts from Probability Theory and Statistics 1

1.1. The role of probability in civil engineering 1
1.2. Physical and statistical uncertainties 2
1.3. Axiomatics 3
1.3.1. Probabilities 3
1.3.2. Axioms 3
1.3.3. Consequences 5
1.3.4. Conditional probabilities 5
1.4. Random variables – distributions 8
1.4.1. Definitions 8
1.4.2. Sampling 8
1.4.3. Probability density function 10
1.4.4. Main descriptors of a random variable 11
1.4.5. Joint variables 15
1.4.6. Independent variables 16
1.4.7. Correlation coefficient 16
1.4.8. Functions of random variables 18
1.4.9. Approximate moments 20
1.5. Useful random variables 21
1.5.1. Discrete variables 21
1.5.2. Normal distribution 25
1.5.3. Lognormal distribution 26
1.5.4. Beta distribution 28
1.5.5. Exponential distribution 29
1.5.6. Gamma distribution 30
1.5.7. Student's t-distribution 31

1.6. Limit theorems 31
1.6.1. Law of large numbers 32
1.6.2. Limit theorems 35
1.7. Modeling random variables 38
1.7.1. Point estimation 39
1.7.2. Interval estimation 43
1.7.3. Estimation of fractiles 46
1.7.4. Estimation of the distribution 48
1.8. Distribution of extremes 51
1.9. Significance testing 58
1.9.1. Type I and II errors 60
1.9.2. Usual tests 61
1.10. Bayesian analysis 65
1.10.1. *A priori* and *a posteriori* distributions 66
1.10.2. Updating estimators 68
1.10.3. Bayesian networks 70
1.11. Stochastic processes 74
1.11.1. Basic principles 74
1.11.2. Markovian chains 75
1.11.3. State probability 76
1.11.4. Time between stages 78

Chapter 2. Structural Safety, Performance and Risk 81

2.1. Introduction 81
2.2. Safety and risk 82
2.2.1. Concepts of safety 82
2.2.2. Concept of risk related to a danger or threat 83
2.2.3. Risk assessment 84
2.2.4. Hazard 85
2.3. Risk evaluation and acceptable risk 87
2.3.1. Risk assessment 87
2.3.2. Acceptable risk 89
2.4. Risk-based management 96
2.4.1. Strategies 96
2.4.2. Risk analysis 96
2.4.3. Legal point of view for a risk-based approach 104
2.5. Examples of failure: bridges 105
2.6. From safety to performance 110
2.6.1. Functions of a structure 110
2.6.2. Performance 112
2.6.3. Evolution of structural functionality 119
2.6.4. Consequences of performance losses 121

2.6.5. Generalization of the concept of risk 121
2.7. Human errors 122

Chapter 3. Performance-based Assessment 125

3.1. Analysis methods and structural safety 125
3.1.1. Allowable stress principle 128
3.1.2. Limit states and partial factors 128
3.1.3. Probability-based approach 132
3.2. Safety and performance principles 134
3.2.1. New structures 135
3.2.2. Existing structures 135
3.3. Invariant measures 136
3.4. Reliability theory 138
3.4.1. Basic problem 138
3.4.2. Convolution integral 139
3.4.3. Normal variables 140
3.4.4. Geometric expression of the reliability index 142
3.4.5. Joint distribution representation 145
3.4.6. Limit state with more than two uncorrelated normal variables . . . 145
3.4.7. Limit state with correlated variables 148
3.5. General formulation 150
3.5.1. Failure component – failure mode 150
3.5.2. Safety margins – limit state functions 150
3.5.3. Calculation methods 151
3.5.4. Basler-Cornell index 152
3.5.5. Hasofer-Lind index 158
3.5.6. Rackwitz-Fiessler algorithm 161
3.5.7. Isoprobability transformations 162
3.5.8. Calculation of the failure probability 168
3.5.9. Monte-Carlo methods 172
3.5.10. Response surfaces 176
3.5.11. Sensitivity measures 183
3.6. System reliability 187
3.6.1. Mathematical concepts 190
3.6.2. Calculation of the system probability of failure 199
3.6.3. Robustness and vulnerability 205
3.7. Determination of collapse/failure mechanisms 208
3.7.1. Generation of safety margins for truss structures 208
3.7.2. β-unzipping method 213
3.8. Calibration of partial factors 217
3.9. Nature of a probabilistic calculation 224
3.10. Failure probabilities and acceptable risks 225

3.10.1. Acceptable failure probabilities . . . 225
3.10.2. Concept of acceptable risk . . . 230
3.10.3. Remarks . . . 233

Chapter 4. Structural Assessment of Existing Structures . . . 235

4.1. Introduction . . . 235
4.2. Assessment rules . . . 236
4.3. Limits when using design rules . . . 236
4.4. Main stages in structural assessment . . . 237
4.5. Structural safety assessment . . . 239
4.5.1. Basic concept . . . 240
4.5.2. First approach . . . 240
4.5.3. Second approach . . . 242
4.5.4. Third approach . . . 244
4.5.5. Fourth approach . . . 250
4.5.6. Implementing rating factors . . . 258
4.6. General remarks on the methods . . . 260

Chapter 5. Specificities of Existing Structures . . . 261

5.1. Loads . . . 261
5.1.1. Introduction . . . 261
5.1.2. Stochastic processes . . . 264
5.1.3. Spatial variability . . . 285
5.1.4. Load combinations . . . 286
5.1.5. Permanent loads . . . 288
5.1.6. Live loads . . . 291
5.1.7. Environmental loads . . . 298
5.1.8. Exceptional loads . . . 325
5.2. Resistance . . . 331
5.2.1. Material properties and uncertainties . . . 332
5.2.2. Properties of reinforcing and prestressing steel . . . 334
5.2.3. Properties of structural steel . . . 340
5.2.4. Properties of concrete . . . 341
5.3. Geometric variability . . . 348
5.4. Scale effects . . . 351

Chapter 6. Principles of Decision Theory . . . 355

6.1. Introduction . . . 355
6.2. The decision model . . . 356
6.2.1. Decision tree . . . 356
6.2.2. Decision criterion . . . 360

6.2.3. Terminal decision analysis 361
6.2.4. Information value 363
6.3. Controls and inspections 364
6.3.1. Detection probability: a discrete case 367
6.3.2. Detection probability: a continuous case 375
6.3.3. Load tests 381
6.4. Maintenance optimization 384
6.4.1. Identification of degradations and failure modes 387
6.4.2. Decision process and RBI analysis 389
6.4.3. Maintenance types 390
6.5. Life cycle cost analysis 391
6.5.1. Discount calculations 392
6.5.2. Discount rate 394
6.5.3. Some results from discounting analysis 396
6.5.4. Condition, working lifetime and life cycles 398
6.6. Maintenance strategies 403
6.6.1. Corrective maintenance 404
6.6.2. Systematic maintenance 405
6.6.3. Conditional maintenance 406
