<b>Preface</b> . . . . .	ix
<b>Introduction</b> . . . . .	xi
<b>Part 1. Elements from Approximation Theory</b> . . . . .	1
<b>Chapter 1. Uniform Approximation</b> . . . . .	3
1.1. Canonical polynomials and uniform approximation . . . . .	3
1.2. Existence of the best approximation . . . . .	4
1.3. Characterization and uniqueness of the best approximation . . . . .	5
1.3.1. Proof of the Borel–Chebyshev theorem . . . . .	7
1.3.2. Example . . . . .	13
<b>Chapter 2. Convergence Rates for the Uniform Approximation and Algorithms</b> . . . . .	15
2.1. Introduction . . . . .	15
2.2. The Borel–Chebyshev theorem and standard functions . . . . .	15
2.3. Convergence of the minimax approximation . . . . .	20
2.3.1. Rate of convergence of the minimax approximation . . . . .	21
2.4. Proof of the de la Vallée Poussin theorem . . . . .	24
2.5. The Yevgeny Yakovlevich Remez algorithm . . . . .	28
2.5.1. The Remez algorithm . . . . .	29
2.5.2. Convergence of the Remez algorithm . . . . .	33
<b>Chapter 3. Constrained Polynomial Approximation</b> . . . . .	43
3.1. Introduction and examples . . . . .	43
3.2. Lagrange polynomial interpolation . . . . .	47
3.3. The interpolation error . . . . .	50

3.3.1. A qualitative result . . . . .	50
3.3.2. A quantitative result . . . . .	52
3.4. The role of the nodes and the minimization of the interpolation error . . . . .	54
3.5. Convergence of the interpolation approximation . . . . .	56
3.6. Runge phenomenon and lack of convergence . . . . .	57
3.7. Uniform approximation for $C^{(\infty)}([a, b])$ functions . . . . .	62
3.8. Numerical instability . . . . .	63
3.9. Convergence, choice of the distribution of the nodes, Lagrange interpolation and splines . . . . .	67
<b>Part 2. Optimal Designs for Polynomial Models . . . . .</b>	<b>69</b>
<b>Chapter 4. Interpolation and Extrapolation Designs for the Polynomial Regression . . . . .</b>	<b>71</b>
4.1. Definition of the model and of the estimators . . . . .	71
4.2. Optimal extrapolation designs: Hoel–Levine or Chebyshev designs . .	75
4.2.1. Uniform optimal interpolation designs (according to Guest) . . . .	85
4.2.2. The interplay between the Hoel–Levine and the Guest designs . . .	95
4.2.3. Confidence bound for interpolation/extrapolation designs . . . . .	98
4.3. An application of the Hoel–Levine design . . . . .	100
4.4. Multivariate optimal designs: a special case . . . . .	103
<b>Chapter 5. An Introduction to Extrapolation Problems Based on Observations on a Collection of Intervals . . . . .</b>	<b>113</b>
5.1. Introduction . . . . .	113
5.2. The model, the estimator and the criterion for the choice of the design . . . . .	119
5.2.1. Criterion for the optimal design . . . . .	121
5.3. A constrained Borel–Chebyshev theorem . . . . .	122
5.3.1. Existence of solutions to the $P_{g-1}(\mathbf{0}, 1)$ problem . . . . .	122
5.3.2. A qualitative discussion on some constrained Borel–Chebyshev theorem . . . . .	123
5.3.3. Borel–Chebyshev theorem on $[a, b] \cup [d, e]$ . . . . .	125
5.3.4. From the constrained Borel–Chebyshev theorem to the support of the optimal design . . . . .	126
5.4. Qualitative properties of the polynomial which determines the optimal nodes . . . . .	127
5.4.1. The linear case . . . . .	127
5.4.2. The general polynomial case . . . . .	128
5.5. Identification of the polynomial which characterizes the optimal nodes . . . . .	130
5.5.1. The differential equation . . . . .	130
5.5.2. Example . . . . .	132
5.6. The optimal design in favorable cases . . . . .	134

5.6.1. Some explicit optimal designs . . . . .	136
5.7. The optimal design in the general case . . . . .	137
5.7.1. The extreme points of a linear functional . . . . .	138
5.7.2. Some results on the representation of the extreme points . . . . .	138
5.7.3. The specific case of the Dirac functional at point 0 . . . . .	142
5.7.4. Remez algorithm for the extreme polynomial: the optimal design in general cases . . . . .	145
5.8. Spruill theorem: the optimal design . . . . .	146
<b>Chapter 6. Instability of the Lagrange Interpolation Scheme With Respect to Measurement Errors . . . . .</b>	<b>147</b>
6.1. Introduction . . . . .	147
6.2. The errors that cannot be avoided . . . . .	147
6.2.1. The role of the errors: interpolation designs with minimal propagation of the errors . . . . .	150
6.2.2. Optimizing on the nodes . . . . .	153
6.3. Control of the relative errors . . . . .	157
6.3.1. Implementation of the Remez algorithm for the relative errors . . . . .	162
6.4. Randomness . . . . .	166
6.5. Some inequalities for the derivatives of polynomials . . . . .	167
6.6. Concentration inequalities . . . . .	168
6.7. Upper bounds of the extrapolation error due to randomness, and the resulting size of the design for real analytic regression functions . . . . .	172
6.7.1. Case 1: the range of the observations is bounded . . . . .	177
6.7.2. Case 2: the range of the observations is unbounded . . . . .	183
<b>Part 3. Mathematical Material . . . . .</b>	<b>185</b>
<b>Appendix 1. Normed Linear Spaces . . . . .</b>	<b>187</b>
<b>Appendix 2. Chebyshev Polynomials . . . . .</b>	<b>217</b>
<b>Appendix 3. Some Useful Inequalities for Polynomials . . . . .</b>	<b>221</b>
<b>Bibliography . . . . .</b>	<b>243</b>
<b>Index . . . . .</b>	<b>251</b>
