

Table of Contents

Introduction	xv
François LE CHEVALIER	
PART 1. EMERGING CONCEPTS	1
Chapter 1. Joint Diversity and Beamforming for Downlink Communications	3
Luc FÉTY, Danilo ZANATA-FILHO, João Marcos TRAVASSOS ROMANO and Michel TERRÉ	
1.1. Introduction.	3
1.2. Space diversity versus beamforming	6
1.3. Signal model	8
1.4. Beamforming by SNR maximization.	9
1.5. Combining transmit diversity and beamforming	11
1.6. Minimum variance criterion	14
1.6.1. Criterion formulation.	14
1.6.2. Simulation results.	16
1.7. Minimum BER criterion	19
1.7.1. Criterion formulation.	19
1.7.2. Simulation results.	20
1.8. Conclusion	22
1.9. Bibliography	23
Chapter 2. Acoustic Antennas for Biomedical and Industrial Ultrasonic Imaging	25
Louis-Pascal TRAN-HUU-HUE, Franck LEVASSORT, Dominique CERTON and Marc LETHIECQ	
2.1. Introduction.	25

2.2. Basic ultrasonic transducers	26
2.2.1. Transducer performance	26
2.2.2. Single-element transducer design	27
2.2.3. Material aspects	30
2.2.4. Radiation of single-element transducers	30
2.3. Transducer arrays	31
2.4. Piezoelectric material issues	35
2.4.1. Material requirements	35
2.4.2. Piezocomposite materials	38
2.4.3. Piezoelectric material characterization	39
2.5. Modeling, design and characterization of ultrasonic antennas	41
2.5.1. Modeling transducer performance	41
2.5.2. Tools for evaluation of transducer performance	42
2.6. High frequency (HF) acoustic antennas for biomedical microscanning applications	43
2.7. New acoustic antennas based on technology of capacitive micromachined ultrasonic transducers.	50
2.7.1. Structure of cMUT transducers.	50
2.7.2. Basic electromechanical properties of cMUT	51
2.7.3. Modeling a cMUT loaded with fluid	55
2.8. Conclusion	58
2.9. Bibliography	59
Chapter 3. Space-time Exploration for Airborne Radars	69
François LE CHEVALIER	
3.1. Introduction.	69
3.2. Colored space-time exploration	70
3.2.1. Digital beamforming (DBF)	70
3.2.2. Colored transmission.	70
3.3. Interleaved scanning	84
3.4. Wideband GMTI.	86
3.5. Conclusion	90
3.6. Bibliography	90
Chapter 4. Multifunction Antenna System Concepts: Opportunity for Ultra-wideband Radars?	93
Joël LEMORTON, Christophe LE MOINE, Christian DELHOTE and Florent CHRISTOPHE	
4.1. Multifunction radio frequency (RF) systems	93
4.1.1. Multimission platforms and multifunction RF systems.	93
4.1.2. Analysis of operational use and possible sharing alternatives.	94

4.1.3. Analysis of several multifunction RF systems in the framework of the SIMEF project	96
4.1.4. Technological requirements for multifunction RF systems	96
4.2. Multifunction RF systems and Ultra-Wideband (UWB) radars	97
4.2.1. Characteristics of UWB RF front-end.	97
4.2.2. Reuse of a multifunction RF system for a UWB radar function.	98
4.2.3. Example of UWB radar function added to a multifunction RF system	99
4.3. Conclusion	100
4.4. Bibliography	100
PART 2. TECHNOLOGIES.	101
Chapter 5. From a Molecule to an Electro-optic Antenna	103
Annabelle SCARPACI, Sylvain LE TACON, Arnaud GARDELEIN, Fabrice ODOBEL, Errol BLART, Dominique AVERTY, Hartmut GUNDEL, Nicolas BREUIL, Tchanguiz RAZBAN and Eric TANGUY	
5.1. Introduction.	103
5.2. Synthesis of the electro-optic polymer	104
5.2.1. Electro-optic polymer synthesis	104
5.2.2. Physical properties of polymer PIII	106
5.3. Antenna design.	106
5.4. Device fabrication and poling	109
5.5. Experimental setup	111
5.6. Results.	113
5.7. Conclusion	114
5.8. Acknowledgments.	115
5.9. Bibliography	115
Chapter 6. Terahertz Broadband Micro-antennas for Continuous Wave Imaging	119
Alain KREISLER, Ibrahim TÜRER, Xabier GAZTELU, Alexander SCHEURING and Annick DÉGARDIN	
6.1. Introduction.	119
6.1.1. First approach	120
6.1.2. Second approach	121
6.2. UWB THz antennas for superconducting hot electron bolometers	122
6.2.1. Background on UWB antenna geometry	122
6.2.2. The log-periodic planar geometry	123

6.2.3. Input impedance of the planar log-periodic antenna	124
6.2.4. Surface currents of the planar log-periodic antenna	126
6.2.5. Planar log-periodic antenna: design of a large scale microwave model.	127
6.2.6. Radiation patterns of the planar log-periodic antenna	127
6.2.7. Electromagnetic coupling between neighboring array elements	129
6.2.8. Log-periodic planar antenna implementation with a cryogenic THz detector	130
6.3. High-impedance THz antennas for semiconducting bolometers	132
6.3.1. High-impedance wideband structures	132
6.3.2. Simulations and measurements: technological approach.	133
6.3.3. Wideband angular concept: spiral antenna	134
6.3.4. Modified spiral: square spiral antenna.	136
6.3.5. Log-periodic concept: array of dipoles	137
6.3.6. New concept: multi-tail dipole antenna with ground plane	139
6.3.7. THz multi-tail dipole: implementation example	141
6.4. Conclusion	141
6.5. Acknowledgments.	143
6.6. Bibliography	143
Chapter 7. Dual Frequency Millimeter Feed	147
Jean-Pierre ADAM, Yannick BÉNIGUEL, André BERTHON, Laurent COSTES and Maarten VAN DER VORST	
7.1. Introduction.	147
7.2. Overview	147
7.3. Technology and first design	148
7.4. Optimization and final design	150
7.5. The whole antenna: horn + reflector	151
7.6. Comparison to measurements	154
7.7. Conclusion	155
7.8. Acknowledgment	156
7.9. Bibliography	156
Chapter 8. Reconfigurable Printed Antennas	157
Robert STARAJ	
8.1. Introduction.	157
8.2. Active antennas	158
8.3. Active components used for reconfiguration	158
8.3.1. The varactor diode	159
8.3.2. The PIN diode.	160

8.4. Printed antennas and compact antennas	160
8.5. Frequency reconfigurable antennas	162
8.5.1. Continuous frequency reconfiguration	162
8.5.2. Frequency hopping reconfiguration	166
8.6. Radiation pattern reconfiguration	167
8.6.1. Printed arrays	167
8.6.2. DC and RF electrical circuits	168
8.6.3. Antennas with integrated phase shifters	172
8.7. Polarization agile antennas	174
8.8. Self-adjusting antennas	175
8.8.1. Self adjusting frequency agile microstrip antennas	175
8.8.2. Self-adjusting polarization agile microstrip antennas	177
8.9. Conclusion	178
8.10. Acknowledgments	178
8.11. Bibliography	178
Chapter 9. Wideband Antennas and Artificial Magnetic Conductors	183
Xavier BEGAUD	
9.1. Introduction.	183
9.2. Wideband antenna and metamaterial	184
9.2.1. How to design a wideband antenna?	184
9.2.2. What kind of metamaterial?	185
9.3. How to characterize an artificial magnetic conductor?	187
9.3.1. Principle	187
9.3.2. Example	187
9.4. Narrow bandwidth antenna above an AMC	188
9.4.1. Dipole and AMC	188
9.4.2. Dipole and PMC	191
9.5. Wideband antenna placed above an AMC	192
9.5.1. Archimedean spiral above an AMC	192
9.5.2. Bow-Tie antenna above an AMC	194
9.6. Very wideband antenna placed above an AMC	198
9.7. Conclusions.	199
9.8. Acknowledgments	200
9.9. Bibliography	200
Chapter 10. High Impedance Surface Close to a Radiating Dipole	201
Olivier MAAS, Habiba OUSLIMANI and Luyang ZHOU	
10.1. Introduction	201
10.2. Antenna study.	201

10.3. Analysis of the phenomena	205
10.4. Phenomenological model of the radiating array	210
10.5. Conclusion	212
10.6. Bibliography	212
PART 3. DETECTION/LOCALIZATION	213
Chapter 11. Advanced Processing for DOA Estimation	215
Pascal CHEVALIER and Anne FERRÉOL	
11.1. Introduction	215
11.1.1. Standard processing for DOA estimation	215
11.1.2. New operational needs and advanced DOA estimation techniques	217
11.2. Observation model, problem formulation and standard MUSIC method	219
11.2.1. Observation model	219
11.2.2. Problem formulation	221
11.2.3. Standard MUSIC method	221
11.3. Non-selective advanced DOA estimation techniques	222
11.3.1. Presentation	222
11.3.2. DOA estimation methods exploiting diversely polarized antennas	222
11.3.3. Sequential DOA estimation techniques	224
11.3.4. Non-circular DOA estimation methods	227
11.3.5. Spatio-temporal DOA estimation methods	229
11.4. Selective advanced DOA estimation methods.	230
11.4.1. Presentation	230
11.4.2. DOA estimation techniques with a reference or cooperative DOA estimation techniques	230
11.4.3. Cyclic DOA estimation methods	231
11.4.4. Higher Order DOA estimation methods.	233
11.4.5. DOA estimation methods after blind identification of the signatures	236
11.5. Conclusion	237
11.6. Bibliography	238
Chapter 12. Multifunction Airborne Antennas	241
Christian RENARD, Maxime ROMIER and Michel SOIRON	
12.1. Introduction	241
12.2. Functions performed by the principal sensors of a fighter aircraft	242

12.3. Technique of active antennas	243
12.4. Multifunction antennas	244
12.4.1. Antenna architecture	246
12.4.2. Dual-polarization antenna	248
12.5. Model for the antenna	250
12.6. Potential prospects	253
12.7. Conclusion	254
12.8. Bibliography	254
Chapter 13. Active Sonar: Port/Starboard Discrimination on Very Low Frequency Triplet Arrays	255
Yves DOISY	
13.1. Introduction	255
13.2. Port/starboard beamforming on a triplet array.	256
13.2.1. Conventional (or cardioid) beamforming and limitations.	257
13.2.2. Adaptive port-starboard beamforming:	260
13.2.3. Experimental at-sea results	264
13.2.4. Conclusion	267
13.3. Adaptive beamforming on a triplet array for reverberation reduction	267
13.3.1. Introduction	267
13.3.2. Conclusion	270
13.4. Bibliography	270
Chapter 14. Airborne High Precision Location of Radiating Sources	271
Thierry DELOUES, Dominique MÉDYNSKI and Dominique LE BIHAN	
14.1. Introduction	271
14.2. Problem formulation.	272
14.3. Description of lab experiment	274
14.3.1. Context	274
14.3.2. General principle	276
14.3.3. Experiment	281
14.4. Conclusion	296
14.5. Bibliography	297
Chapter 15. Ground-based Deformable Antennas	299
Guillaume LESUEUR	
15.1. Introduction	299
15.2. Impact of antenna distortions on radar systems	300
15.2.1. Array factor of deformed antennas	300
15.2.2. Impact on antenna pointing	304

15.2.3. Parameters of targets in the pointing direction	305
15.2.4. Conclusion and compensation method.	308
15.3. Instrumentation of deformable antennas	308
15.3.1. Mechanical analysis.	308
15.3.2. Optical Sensor	309
15.4. Compensation with knowledge of the antenna shape	312
15.4.1. Phase compensation in the main direction	313
15.4.2. Compensation by spectral analysis of deformations.	315
15.5. Experimentation on a deformable antenna mock-up	321
15.6. Conclusion	325
15.7. Bibliography	325
Chapter 16. Automatic Take-off and Landing System	327
Pascal CORNIC	
16.1. Introduction	327
16.2. State of the art	328
16.3. MAGIC ATOLS main features	329
16.4. Radar features.	331
16.4.1. Functional performances.	331
16.4.2. Wave form	331
16.4.3. Elevation Angular localization	332
16.4.4. Low elevation processing	332
16.5. MAGIC ATOLS processing for low elevation measurement.	334
16.5.1. Principle	334
16.5.2. Antenna architecture	337
16.6. On the field experimental results	339
16.7. Conclusion	341
16.8. Bibliography	341
Chapter 17. Anti-jamming for Satellite Navigation	343
Franck LETESTU, Fabien BERNARD and Guillaume CARRIE	
17.1. Satellite navigation principles	343
17.1.1. Triangulation.	343
17.1.2. GNSS signals: the GPS example	345
17.2. Vulnerability of the GNSS signals	349
17.2.1. GNSS signal power	349
17.2.2. Example of interference scenario	351
17.3. GNSS antennas	353
17.3.1. GNSS standard antennas.	353
17.3.2. Non-standard GNSS antennas.	356
17.3.3. Equipment upgrade	357

17.4. Anti-jamming principles	358
17.4.1. Space processing	358
17.4.2. Space-time processing	366
17.4.3. Beamforming	367
17.5. Antenna and associated electronics integration	370
17.5.1. Antenna array examples	370
17.5.2. Antenna electronics evolution	371
17.6. New functions associated with the antenna array	373
17.6.1. Detection of interferences	373
17.6.2. Interferences location	376
17.7. Conclusion	382
17.8. Bibliography	383
PART 4. ULTRA-WIDEBAND	385
Chapter 18. Ultra-wideband Antenna Systems	387
Joël ANDRIEU and Michèle LALANDE	
18.1. Introduction	387
18.2. The principles implemented through two applications	387
18.2.1. The radar cross-section measurement in UHF-VHF	387
18.2.2. An impulse UWB radar with aperture synthesis: PULSAR	390
18.3. The ultra-wideband antennas	392
18.4. Limitations of a mono-source device: implementation of multi-source devices with optoelectronic excitation	397
18.4.1. RUGBI project	397
18.4.2. Last evolutions around multisource systems	401
18.5. Pulse antenna systems in high power microwaves	403
18.6. Conclusion	406
18.7. Bibliography	407
Chapter 19. Co-design of the Antenna with LNA for Ultra-wideband Applications	409
Michaël PELISSIER, Serge BORIES, Raffi BOURTOUTIAN and Christophe DELAVEAUD	
19.1. The interest in co-design	409
19.2. Low noise amplifier	410
19.3. The antenna	413
19.4. Co-design methodology	416
19.4.1. Introduction	416
19.4.2. Concept of transducer gain	416
19.4.3. Variation of the circuit transducer gain	417
19.4.4. Implementing joint optimization	419

19.5. Protocols and measurement results	420
19.6. Bibliography	424
Chapter 20. Vector Spherical Harmonic Modeling of 3D-antenna Radiation Function or an UWB-RT Simulator	425
Roxana BURGHELEA, Stéphane AVRILLON and Bernard UGUEN	
20.1. Introduction	425
20.2. Deterministic channel model based on ray tracing	426
20.2.1. PyRay channel simulation tool	426
20.2.2. Antenna related issues	431
20.3. Antenna vector function description via VSH.	432
20.3.1. VSH analysis step	432
20.3.2. Calculation of VSH basis (V and W)	435
20.3.3. VSH synthesis step	436
20.3.4. VSH expansion example.	438
20.3.5. Data compression for antenna data storage	442
20.4. Immediate RT tool application.	447
20.4.1. Antenna vector function synthesis	447
20.4.2. Application to IR-UWB signals.	448
20.5. Conclusions	451
20.6. Bibliography	451
List of Authors	453
Index	459
