<b>Acknowledgments</b> . . . . .	xiii
<b>Introduction</b> . . . . .	xv
<b>Chapter 1. Fixed Man, Enhanced Man, Transformed Man</b> . . . . .	1
1.1. The Anthropocene . . . . .	1
1.2. A new man in the face of progress . . . . .	4
1.2.1. Actroid (clones) . . . . .	4
1.2.2. Android. . . . .	4
1.2.3. Bionic. . . . .	4
1.2.4. Cyborg . . . . .	5
1.2.5. Enhanced man. . . . .	5
1.2.6. Hybrid man . . . . .	5
1.2.7. Hybris or hubris. . . . .	5
1.3. Fundamental technologies . . . . .	6
1.3.1. Gerontechnology . . . . .	6
1.3.2. The robolution. . . . .	7
1.3.3. Anthropotechnics . . . . .	7
1.3.4. Nanorobotics or fog utility technology . . . . .	8
1.3.5. Diagnostic technology . . . . .	8
1.3.6. Genetics . . . . .	9
1.4. Debates on technologies and men. . . . .	10
1.4.1. Transhumanism . . . . .	10
1.4.2. Replacement anthropotechnics . . . . .	11
1.4.3. Algeny . . . . .	11
1.5. World, <i>mondialisation</i> and health. . . . .	12
1.5.1. A tool for measuring speed . . . . .	12

---

1.5.2. A better world . . . . .	12
1.5.3. A world outside humans . . . . .	13
1.6. <i>Mondialisation</i> , globalization and <i>mondialité</i> . . . . .	13
1.6.1. The notion of <i>mondialité</i> . . . . .	14
1.7. Globalization, internationalization, localization . . . . .	15
1.7.1. Some additional definitions . . . . .	15
1.7.2. Types of <i>mondialisation</i> . . . . .	16
1.7.3. Technosciences . . . . .	17
1.7.4. Evidence-based medicine . . . . .	17
1.7.5. The shortage system . . . . .	18
1.7.6. Life Meccano . . . . .	20
<b>Chapter 2. The Necessary Industrialization of Medicine</b> . . . . .	23
2.1. Medical innovation as a factor of industrialization. . . . .	24
2.1.1. Process innovation and product innovation. . . . .	24
2.1.2. The patient's role . . . . .	25
2.1.3. Personalized medicine . . . . .	25
2.1.4. Towards a new world . . . . .	26
2.2. The notion of apparatus. . . . .	27
2.2.1. Agamben's apparatus . . . . .	27
2.2.2. Foucault's apparatus . . . . .	28
2.2.3. Hyppolite's apparatus . . . . .	30
2.2.4. The notion of medical apparatus . . . . .	31
2.3. The meaning of apparatus . . . . .	32
2.3.1. Legal meaning of apparatus. . . . .	32
2.3.2. Technological meaning of apparatus . . . . .	32
2.3.3. Military meaning of apparatus . . . . .	32
2.3.4. Economic meaning of apparatus . . . . .	33
2.3.5. The religious apparatus . . . . .	34
2.3.6. The disciplinary apparatus . . . . .	36
2.4. The "plus" man . . . . .	36
2.4.1. The plus man, a product of cybernetics . . . . .	37
2.4.2. The production of quality of life . . . . .	37
2.4.3. Incorporation: tools turning the tables on men . . . . .	37
2.4.4. The prosthetic or orthotic man . . . . .	38
2.5. Science, technology, art and industrialization. . . . .	39
2.5.1. A current kind of medicine stemming from technology . . . . .	39
2.5.2. Science and technology in the face of the industrialization of health . . . . .	40

<b>Chapter 3. Industrialization: its Obstacles and its Rules</b> . . . . .	43
3.1. The opposition of the actors in the health industry as an obstacle . . . . .	43
3.1.1. The double level of opposition . . . . .	43
3.1.2. The notion of opposition. . . . .	44
3.1.3. The role of “implementers” . . . . .	44
3.2. A comparison with other economic sectors . . . . .	47
3.2.1. Managing the complexity of health . . . . .	47
3.2.2. Adjusting to patients (the clients) . . . . .	48
3.2.3. Increasing effectiveness and reducing losses. . . . .	49
3.2.4. Creating a team for auditing and controlling healthcare production . . . . .	49
3.2.5. Reducing the number of medical mistakes . . . . .	50
3.2.6. The use of IT . . . . .	51
3.2.7. The transparency of medical services and their prices . . . . .	52
3.2.8. The complex adaptable system of health . . . . .	52
<b>Chapter 4. Acceptability and Diffusion</b> . . . . .	53
4.1. The criteria of the analysis . . . . .	53
4.1.1. The interventionist approach of health policies . . . . .	53
4.1.2. The usage-based approach in the health field . . . . .	54
4.1.3. From usage to knowledge . . . . .	55
4.1.4. The special features of health-related IT . . . . .	55
4.1.5. From health knowledge to industrialized science . . . . .	56
4.1.6. The sources of medical innovation. . . . .	57
4.1.7. The traditional approach: diffusion of innovation (DOI) . . . . .	58
4.1.8. Relative advantage . . . . .	59
4.1.9. Compatibility . . . . .	59
4.1.10. Complexity . . . . .	59
4.1.11. Triability . . . . .	60
4.1.12. Observability. . . . .	60
4.2. The models of adoption of medical technologies. . . . .	61
4.2.1. The TRA (Theory of Reasoned Action) model . . . . .	61
4.2.2. The TPB (Theory of Planned Behavior) model . . . . .	62
4.2.3. The TAM (Technology Acceptance Model) model . . . . .	62
4.2.4. The unifying UTAUT (Unified Theory of Acceptance and Use of Technology) model . . . . .	63
4.3. Some definitions . . . . .	64
4.3.1. The significance of the concept of habitus . . . . .	65

---

4.3.2. The notion of appropriation in the health field. . . . .	66
4.3.3. The notions of interaction and link in the health field . . . . .	66
4.3.4. Material interactions versus interpretational interactions . . . . .	66
4.3.5. Reputational interactions . . . . .	67
<b>Chapter 5. The Dynamics of Diffusion . . . . .</b>	<b>71</b>
5.1. The basis for the dynamics of industrialization. . . . .	71
5.1.1. An approach – both qualitative and quantitative. . . . .	71
5.1.2. Safety in the health industry . . . . .	72
5.1.3. Health as a complex system. . . . .	73
5.2. The advent of new concepts . . . . .	73
5.2.1. Anticipated uses. . . . .	74
5.2.2. Bandwagon adoption. . . . .	74
5.3. Attempting to reduce complexity . . . . .	77
5.3.1. A three-dimensional model to conceive products . . . . .	77
5.3.2. Real time versus asynchrony . . . . .	78
5.3.3. The assessment of good use in the medical field . . . . .	78
5.3.4. More than a blend of engineering science and traditional medicine. . . . .	79
<b>Chapter 6. Digital Identity and Health . . . . .</b>	<b>81</b>
6.1. Digital identity . . . . .	81
6.1.1. Identity . . . . .	82
6.1.2. A manifesto for the advent of the new man . . . . .	83
6.1.3. Likeness as a source of community . . . . .	83
6.1.4. Nomadism, territory and health. . . . .	83
6.1.5. Community, network and network externality . . . . .	84
6.1.6. Electronic community and mobile-phone reality . . . . .	84
6.1.7. The importance of access . . . . .	85
6.1.8. Civil status and personal status . . . . .	85
6.2. The identity crisis of the information-centric society . . . . .	86
6.2.1. What role does identity play in the health industry? . . . . .	87
6.2.2. Dependence . . . . .	89
6.2.3. Internet identity, class, community and tribe. . . . .	90
6.3. Cards as new kinds of identities. . . . .	91
6.3.1. Developments in relation to the awareness of a sick person . . . . .	91
6.3.2. ID versus healthcare cards. . . . .	92
6.3.3. The French “ <i>Carte Vitale</i> ” . . . . .	92

6.3.4. The healthcare staff card. . . . .	92
6.4. The genetic revolution as an ID carrier . . . . .	93
6.4.1. Ease of implementation . . . . .	93
6.4.2. Additional data in the health industry . . . . .	93
6.4.3. DNA, a source of identity . . . . .	94
<b>Chapter 7. Access to Information, Access to Health</b> . . . . .	95
7.1. The access revolution . . . . .	95
7.1.1. More resources, more trading. . . . .	95
7.1.2. The impact of networks: disappearance or concentration of actors? . . . . .	96
7.1.3. What society? . . . . .	97
7.1.4. The two faces of networks in our society . . . . .	98
7.1.5. Towards mutual tolerance. . . . .	99
7.1.6. A theory of access equality . . . . .	100
7.1.7. A modified autonomy level . . . . .	100
7.2. The great “ICT and health” revolution . . . . .	101
7.2.1. Health and the Internet for everybody... . . . .	102
7.2.2. Which political developments should be implemented in the health industry? . . . . .	103
7.3. Assessment tools. . . . .	104
7.3.1. Population access . . . . .	105
7.3.2. Relative risk . . . . .	105
7.3.3. POSSUM. . . . .	105
7.3.4. Conclusion. . . . .	106
<b>Chapter 8. Mondialisation, the Maker of Biopower</b> . . . . .	107
8.1. <i>Mondialisation</i> versus globalization (definition) . . . . .	107
8.1.1. Two kinds of conscience . . . . .	107
8.1.2. Alienation . . . . .	108
8.1.3. Alienation according to Marxists. . . . .	109
8.1.4. What role does alienation play? . . . . .	110
8.1.5. François Perroux’s critique . . . . .	110
8.1.6. The recent rejection of alienation-improvement duality in the health industry . . . . .	112
8.2. Are there temporal paradoxes? . . . . .	113
8.2.1. Marc Augé’s three temporal paradoxes . . . . .	114
8.2.2. Time versus space . . . . .	114
8.2.3. Biopower, diaspora, power and territories, and disappearing borders . . . . .	115

---

<b>Chapter 9. Belief, Myth and Biopower</b> . . . . .	117
9.1. The problem of belief . . . . .	117
9.1.1. The current role played by beliefs in the health industry . . . . .	117
9.1.2. Biopower. . . . .	118
9.1.3. The secret power of mediation . . . . .	119
9.1.4. What is biopower? . . . . .	119
9.2. Critique of the notion of biopower . . . . .	121
9.2.1. Biopower and psyche . . . . .	122
9.2.2. Biopower according to Foucault . . . . .	123
9.2.3. The denunciation dogma of moralism. . . . .	125
9.3. Equality and tyrannical kinds of power . . . . .	125
9.3.1. Biopower and institutions . . . . .	127
9.3.2. Biopower and imagination . . . . .	127
9.3.3. Belief and mutation. . . . .	130
9.3.4. Aging well, treated well . . . . .	130
9.4. Conception or has man become yet another object? . . . . .	131
9.4.1. Toward the immortality of the new man . . . . .	132
9.4.2. The technological progress of networks makes immortality possible . . . . .	132
9.5. Marc Augé's four observations about identity . . . . .	133
9.6. Identity, individual and culture . . . . .	134
9.6.1. The new <i>santacteur</i> model . . . . .	135
9.6.2. The purchase of life or perpetual rebirth . . . . .	135
9.7. The purchase of citizenship . . . . .	136
<b>Chapter 10. Trust</b> . . . . .	139
10.1. The source of trust . . . . .	139
10.1.1. Failures versus mistakes . . . . .	139
10.1.2. Screening versus medical diagnosis . . . . .	140
10.1.3. Looking for effectiveness . . . . .	140
10.1.4. Errors in judgment . . . . .	141
10.1.5. The stages of competence . . . . .	142
10.1.6. The significance of relations and links. . . . .	144
10.2. A resilient approach . . . . .	144
10.2.1. Why resilience? . . . . .	144
10.2.2. The HACCP approach as a solution . . . . .	145
10.3. The creative man . . . . .	147
10.3.1. Man, between user and producer? . . . . .	148
10.3.2. The individual as an actor . . . . .	148
10.3.3. A sense of body . . . . .	149
10.3.4. The theory of affordance. . . . .	150

10.4. The dynamic approach (GEMS) . . . . .	150
10.4.1. A description of the GEMS approach . . . . .	150
<b>Chapter 11. The Social Reality . . . . .</b>	<b>153</b>
11.1. Singularist and transhumanist theories . . . . .	153
11.2. DNA microarrays and their use . . . . .	154
11.3. The economic reality . . . . .	155
11.3.1. Enquiring patients . . . . .	155
11.3.2. The economic logic . . . . .	155
11.3.3. The role of telemedicine . . . . .	156
11.4. The new industrialized health . . . . .	156
11.4.1. The four Ps approach . . . . .	156
11.4.2. Prevention or pre-emption . . . . .	157
11.4.3. Personalized medicine . . . . .	157
11.5. Debating the model . . . . .	158
11.5.1. The engineer’s approach . . . . .	158
11.5.2. The range of possibilities of the SNITEM model . . . . .	158
11.5.3. The doctor’s approach: ANTEL replies . . . . .	159
11.5.4. The market approach . . . . .	159
11.5.5. Medical tourism . . . . .	160
<b>Chapter 12. The Technologies that Could Change Everything . . . . .</b>	<b>161</b>
12.1. Biotechnology . . . . .	161
12.1.1. Transplants, cells and cell therapy . . . . .	161
12.1.2. The applications of biometry . . . . .	162
12.2. Energy and material technologies . . . . .	163
12.2.1. Energy. . . . .	163
12.3. Materials. . . . .	163
12.3.1. Artificial zeolites . . . . .	163
12.3.2. Graphene . . . . .	164
12.3.3. Synthetic biology . . . . .	165
12.3.4. A new creative dimension: 3D printing . . . . .	165
12.4. The “nano” world . . . . .	166
12.4.1. Nanosystems . . . . .	166
12.4.2. Nanoproducts . . . . .	167
12.5. Information technology . . . . .	167
12.5.1. Modeling life. . . . .	167
12.5.2. New digital tools . . . . .	167
12.5.3. Computing power . . . . .	168
12.5.4. Future man–machine interfaces. . . . .	169
12.5.5. Immersive augmented reality . . . . .	170

12.5.6. Seeing beyond the visible . . . . .	171
12.5.7. Sensing emotions and neurosciences. . . . .	172
12.6. Online data and “big data” . . . . .	172
12.6.1. Volumes produced . . . . .	173
12.6.2. The predominance of the digital system. . . . .	173
12.6.3. The limitations of the digital system . . . . .	174
12.6.4. Volume, variety, velocity, value, veracity and infobesity. . . . .	175
12.6.5. Solutions to infobesity . . . . .	175
12.6.6. From documents to contents. . . . .	176
12.6.7. Effective use . . . . .	176
12.6.8. Professions . . . . .	177
12.6.9. New software frameworks. . . . .	177
12.6.10. The patient’s data . . . . .	177
12.6.11. Opt-in, anonymity and limitations . . . . .	178
12.6.12. Unfeasible exhaustiveness . . . . .	178
12.7. Robots and robotics . . . . .	179
12.7.1. Robotics . . . . .	179
12.8. Selection technologies. . . . .	181
12.8.1. Selection . . . . .	181
12.8.2. Screening tests, companion diagnostics . . . . .	182
12.9. Health and technological flops. . . . .	183
12.9.1. The multitude of examples. . . . .	183
12.9.2. The problem of diffusion. . . . .	183
12.9.3. Some theoretical notions to get over flops in the health industry . . . . .	184
<b>Conclusion</b> . . . . .	185
<b>Bibliography</b> . . . . .	187
<b>Index</b> . . . . .	191
