

Table of Contents

Chapter 1. Introduction	1
1.1. Introduction and preliminary warning	1
1.2. Bibliography	7
Chapter 2. Some Useful Concepts and Reminders	9
2.1. Quantum mechanics and the Schrödinger equation.	9
2.1.1. A more than brief introduction	9
2.1.2. The postulates of quantum mechanics	12
2.1.3. Essential properties of observables	14
2.1.4. Momentum operator	16
2.1.5. Stationary states	17
2.1.6. Probability current	18
2.1.7. Electrons in vacuum and group velocity	20
2.2. Energy band structure in a periodic lattice	22
2.3. Semi-classical approximation	25
2.4. Electrons and holes.	27
2.5. Semiconductor heterostructure.	30
2.6. Quantum well.	31
2.6.1. 1D case.	31
2.6.2. Coupled quantum wells	37
2.6.3. Quantum-confined Stark effect	40
2.7. Tight-binding approximation.	43
2.8. Effective mass approximation	49
2.8.1. Wannier functions	49
2.8.2. Effective mass Schrödinger equation	51
2.9. How good is the effective mass approximation in a confined structure?	55
2.10. Density of states.	57
2.10.1. 3D case	57

2.10.2. 2D case	58
2.10.3. 1D case	59
2.10.4. Summary	60
2.11. Fermi-Dirac statistics	60
2.12. Examples of 2D systems	62
2.13. Characteristic lengths and mesoscopic nature of electron transport	65
2.14. Mobility: Drude model	67
2.15. Conduction in degenerate materials	69
2.16. Einstein relationship	71
2.17. Low magnetic field transport	73
2.18. High magnetic field transport	75
2.18.1. Introduction	75
2.18.2. Some reminders about the particle Hamiltonian in the presence of an electromagnetic field	76
2.18.3. Action of a magnetic field (classical)	77
2.18.4. High magnetic field transport	78
2.19. Exercises	94
2.19.1. Exercise	94
2.19.2. Exercise	95
2.19.3. Exercise	97
2.19.4. Exercise	99
2.20. Bibliography	100
Chapter 3. Ballistic Transport and Transmission Conductance	103
3.1. Conductance of a ballistic conductor	103
3.2. Connection between 2D and 1D systems	109
3.3. A classical analogy	110
3.4. Transmission conductance: Landauer's formula	111
3.5. What if the device length really does go down to zero?	114
3.6. A smart experiment which shows you everything	117
3.7. Relationship between the Landauer formula and Ohm's law	120
3.8. Dissipation with a scatterer	123
3.9. Voltage probe measurements	127
3.10. Comment about the assumption that T is constant	129
3.11. Generalization of Landauer's formula: Büttiker's formula	130
3.11.1. Büttiker's formula	130
3.11.2. Three-terminal device	133
3.11.3. Four-terminal device	134
3.12. Non-zero temperature	135
3.12.1. Large applied bias $\mu_1 - \mu_2 \gg 0$	135
3.12.2. Incoherent states	136

3.12.3. Coherent states	138
3.12.4. Physical parameters included in the transmission probability	141
3.12.5. Linear response ($\mu_1 - \mu_2 < k_B T$ or $T(E) = Cst$)	142
3.13. The integer quantum Hall effect	143
3.13.1. The experiment	143
3.13.2. The explanation	145
3.14. Exercises	150
3.14.1. Exercise	150
3.14.2. Exercise	151
3.14.3. Exercise	152
3.14.4. Exercise	153
3.14.5. Exercise	155
3.15. Bibliography	157
Chapter 4. S-matrix Formalism	159
4.1. Scattering matrix or <i>S</i> -matrix.	159
4.2. <i>S</i> -matrix combination rules	163
4.3. A simple example: the <i>S</i> -matrix of a Y-junction	164
4.4. A more involved example: a quantum ring	166
4.5. A final more complex example: solving the 2D Schrödinger equation	169
4.5.1. Calculation principle.	169
4.5.2. Some numerical examples	178
4.6. Exercises.	181
4.7. Bibliography	182
Chapter 5. Tunneling and Detrapping	183
5.1. Introduction	183
5.2. Single barrier tunneling	185
5.3. Two coherent devices in series: resonant tunneling	189
5.4. Physical meaning of the terms appearing in the resonant transmission probability	194
5.5. Tunneling current	197
5.6. Resonant tunneling in the real world	199
5.7. Discrete state coupled to a continuum	201
5.8. Fano resonance	210
5.9. Fano resonance in a quantum-coherent device	212
5.10. Fano resonance in the real world.	217
5.11. Exercises	219
5.11.1. Exercise	219
5.11.2. Exercise	220
5.11.3. Exercise	221
5.11.4. Exercise	222

5.11.5. Exercise	222
5.11.6. Exercise	223
5.12. Bibliography	224
Chapter 6. An Introduction to Current Noise in Mesoscopic Devices	225
6.1. Introduction	225
6.2. Ergodicity and stationarity	226
6.3. Spectral noise density and Wiener-Khintchine theorem	228
6.4. Measured power spectral density	230
6.5. Shot noise in the classical case.	231
6.6. Why the shot noise formula is not valid in a macroscopic conductor	235
6.6.1. Current pulse shape	235
6.6.2. Non-ballistic conductor	237
6.7. Classical example 1: a game with cannon balls	238
6.8. Classical example 2: cars and anti-cars	238
6.9. Quantum shot noise	240
6.9.1. Fluctuations and Pauli exclusion principle	240
6.9.2. Shot noise power spectrum at $T=0$	241
6.10. Bibliography	247
Chapter 7. Coulomb Blockade Effect	249
7.1. Introduction	249
7.2. Energy balance when charging capacitors	251
7.3. Coulomb blockade in a two-terminal device.	253
7.4. Coulomb blockade in a single-electron transistor.	258
7.5. Single-electron turnstile	265
7.6. Coulomb blockade in the real world	265
7.7. Exercises.	268
7.7.1. Exercise	268
7.7.2. Exercise	269
7.7.3. Exercise	270
7.8. Bibliography	271
Chapter 8. Specific Interference Effects	273
8.1. Classical Lagrangian with a magnetic field	273
8.2. Classical Lagrangian without a magnetic field	275
8.3. Phase shift due to a magnetic field	275
8.4. Aharonov-Bohm effect in mesoscopic rings.	276
8.4.1. Theory	276
8.4.2. Aharonov-Bohm effect in the real world	279

8.5. 1D localization	280
8.5.1. Interference effects when λ_ϕ exceeds the distance between impurities	280
8.5.2. 1D localization	281
8.6. Weak localization	283
8.7. Universal conductance fluctuations	286
8.8. Bibliography	289
Chapter 9. Graphene and Carbon Nanotubes	291
9.1. Introduction	291
9.2. Graphene band structure	293
9.3. Integer quantum hall effect in graphene	301
9.4. Carbon nanotube band structure	304
9.5. Carbon nanotube bandgap	309
9.6. Carbon nanotube density of states and effective mass	313
9.7. Electron transport in and quantum dots from carbon nanotubes	315
9.8. Exercises.	321
9.8.1. Exercise	321
9.8.2. Exercise	322
9.8.3. Exercise	323
9.9. Bibliography	323
Chapter 10. Appendices	325
10.1. The uncertainty principle	325
10.2. Crystalline lattice; some definitions and theorems	326
10.3. The harmonic oscillator	330
10.4. Stationary perturbation theory	336
10.4.1. Non-degenerate perturbation theory	336
10.4.2. Degenerate perturbation theory.	338
10.5. Method of Lagrange multipliers	342
10.6. Variational principle	344
10.7. Wiener-Khintchine theorem.	348
10.8. Binomial probability law	349
10.9. Random Poisson process	350
10.10. Transformation of the Cartesian wavevector coordinates into transverse and parallel components.	351
10.11. Useful physical constants	353
Solutions to Exercises	355
Exercise 2.19.1.	355
Exercise 2.19.2.	356
Exercise 2.19.3.	357

Exercise 2.19.4	360
Exercise 3.14.1	361
Exercise 3.14.2	363
Exercise 3.14.3	363
Exercise 3.14.4	365
Exercise 3.14.5	367
Exercise 5.11.1	368
Exercise 5.11.2	369
Exercise 5.11.3	370
Exercise 5.11.4	371
Exercise 5.11.5	372
Exercise 5.11.6	373
Exercise 7.7.1	374
Exercise 7.7.2	375
Exercise 7.7.3	376
Exercise 9.8.1	378
Exercise 9.8.2	379
Exercise 9.8.3	380
Index	383
