

Table of Contents

Introduction	xiii
The Authors	xvi
Chapter 1. The Odyssey of Remote Sensing from Space: Half a Century of Satellites for Earth Observations.	1
Théo PIRARD	
1.1. To improve the weather forecasts	2
1.2. Technological challenges to spy and to map from orbit	3
1.3. Toward global environmental observers in space	6
1.4. The digital revolution of the ICTs for GIS applications	9
1.5. Suggested reading	12
Chapter 2. Territorial and Urban Measurements	13
Marius PAULESCU and Viorel BADESCU	
2.1. Solar radiation at the Earth's surface	13
2.2. Instrumentation	17
2.2.1. Fundamentals of solar irradiance measurements	18
2.2.2. Solar radiometers	20
2.2.2.1. Pyrheliometers	20
2.2.2.2. Pyranometers	20
2.2.2.3. World radiometric reference	23
2.2.2.4. Radiometers calibration and uncertainty	23
2.2.2.5. Classification of pyranometers	25
2.2.3. Sunshine duration measurements	25
2.2.3.1. Burning card method	25
2.2.3.2. Pyranometric method	27

2.2.4. Data quality assessment	28
2.2.5. Data availability.	29
2.3. Radiation measurements in urban environment.	29
2.3.1. Description scales.	29
2.3.2. Urban site description	30
2.3.3. WMO recommendations.	31
2.3.3.1. Scope of measurements and measurement site selection	31
2.3.3.2. Measurements and corrections.	32
2.4. Conclusions.	33
2.5. Acknowledgments.	33
2.6. Bibliography	33
Chapter 3. Sky Luminance Models	37
Matej KOBÁV and Grega BIZJAK	
3.1. CIE standard overcast sky (1955)	39
3.2. CIE standard clear sky (1996)	39
3.3. CIE standard general sky.	40
3.4. All-weather model for sky luminance distribution – Perez	45
3.5. ASRC–CIE model.	48
3.6. Igawa all-sky model.	49
3.7. Absolute luminance	52
3.8. Visualization	54
3.9. Conclusion	54
3.10. Bibliography	55
Chapter 4. Satellite Images Applied to Surface Solar Radiation Estimation	57
Bella ESPINAR and Philippe BLANC	
4.1. The solar resource	57
4.2. Ground measurements of the solar resource.	60
4.2.1. Ground instruments.	60
4.2.2. The spatial variability of solar radiation	62
4.3. Satellite images for SSI estimation	64
4.4. Two different approaches for satellite-based SSI estimation	68
4.4.1. SSI clear-sky models.	68
4.4.2. The inverse approach.	69
4.4.2.1. The calculation of the cloud coverage index	69
4.4.2.2. The calculation of the GHI	70
4.4.3. The direct approach	72
4.5. Accuracy of satellite-based SSI estimations.	74
4.6. Use of satellite observations for high-resolution solar radiation estimation.	78

4.6.1. High-resolution solar atlas of Provence-Alpes-Côte d'Azur	79
4.6.1.1. Model for the variation of the optical path length	80
4.6.1.2. Model for sky obstruction effects by the orography	81
4.6.1.3. Uncertainty analysis of the solar atlas	85
4.6.1.4. Dissemination of the solar atlas	86
4.6.2. Solar resource assessment at urban scale	87
4.7. Bibliography	92
Chapter 5. Worldwide Aspects of Solar Radiation Impact	99
Benoit BECKERS	
5.1. Global energy budget at the Earth level	99
5.2. The distribution of solar radiation on the Earth's surface	102
5.2.1. Consequence of the unequal distribution of sunshine	103
5.2.2. Effect of the Earth's rotation	104
5.2.3. Influence of continental masses	106
5.3. The Sun at different latitudes	107
5.4. The solar diagrams	108
5.5. Climate and housing	111
5.6. Solar energy at urban scale	113
5.7. Conclusions and perspectives	115
5.8. Bibliography	117
Chapter 6. Local Energy Balance	119
Pierre KASTENDEUCH	
6.1. Introduction	119
6.2. Soil–vegetation–atmosphere transfer model	120
6.3. Physiographic data and boundary conditions	121
6.4. Solar radiation transfers	123
6.5. Infrared radiation transfers	129
6.6. Other heat fluxes	131
6.7. Conclusions	134
6.8. Bibliography	135
Chapter 7. Evapotranspiration	139
Marjorie MUSY	
7.1. Physical bases	140
7.2. Related interest of different types of evapotranspiring surfaces	142
7.2.1. Bare soil	142
7.2.2. Grass-covered areas	143
7.2.3. Green roofs	144
7.2.4. Green walls	144

7.2.5. Trees	146
7.2.6. Parks	148
7.3. From microscale to city scale: the modeling approaches	149
7.3.1. Microscale	149
7.3.2. District scale	152
7.3.3. City scale	153
7.4. Conclusions	154
7.5. Bibliography	154
Chapter 8. Multiscale Daylight Modeling for Urban Environments	159
John MARDALJEVIC and George M. JANES	
8.1. Introduction	159
8.2. Background	160
8.2.1. Climate and microclimate	160
8.2.2. The urban solar microclimate	161
8.2.3. The USM and human experience	162
8.2.4. The USM in guidelines and recommendations	163
8.2.5. “Real” climate	164
8.2.6. Climate-based daylight modeling	165
8.3. Visualizing the urban solar microclimate	167
8.3.1. The San Francisco 3D model	167
8.3.2. Harvesting solar energy	169
8.3.3. A strategic evaluation of urban solar potential	170
8.3.4. Irradiation mapping of “virtual London”	172
8.4. The ASL building: a solar access study	173
8.4.1. Density and zoning in New York City	173
8.4.2. The Art Students League building	174
8.4.3. Quantifying the potential daylight injury	175
8.4.4. Outcomes and implications	178
8.5. Daylighting the New York Times building	180
8.5.1. 3D model for NYT building and surroundings	181
8.5.2. The spatiotemporal dynamics of sunlight exposure	182
8.5.3. Balancing daylight provision and visual comfort	183
8.6. Summary	187
8.7. Acknowledgments	187
8.8. Bibliography	187
Chapter 9. Geometrical Models of the City	191
Daniel G. ALIAGA	
9.1. Introduction	191
9.1.1. Modeling challenges	192
9.1.2. State-of-the-art	193

9.2. Forward procedural modeling	194
9.2.1. Plants and architecture	194
9.2.2. Buildings and cities	194
9.2.3. Streets and parcels	195
9.3. Inverse procedural modeling	196
9.3.1. Inverse parameter estimation	197
9.3.2. Inverse procedure and parameter estimation	198
9.4. Simulation-based modeling	199
9.5. Example systems	200
9.6. Bibliography	200
Chapter 10. Radiative Simulation Methods	205
Pierre BECKERS and Benoit BECKERS	
10.1. Introduction	205
10.2. Geometry	206
10.2.1. The geometric model	206
10.2.2. Solar geometry: calculating the Sun's position	207
10.2.2.1. Earth's revolution	209
10.2.2.2. Earth's rotation	211
10.2.2.3. Sun's azimuth and zenith angle	212
10.2.3. Geometric description of the environment of a point	213
10.2.3.1. Contribution of cartography	213
10.2.3.2. Urban geometry, stereography, and isochronous graph	216
10.3. Loading	218
10.3.1. Radiation sources: Sun and sky	218
10.3.2. Irradiance on differently oriented planes	219
10.3.2.1. Direct radiation on a plane always facing the Sun	219
10.3.2.2. Horizontal plane	221
10.3.2.3. Computation of energy	222
10.4. Computation model	223
10.4.1. Radiosity equations	224
10.4.2. View factors	225
10.4.2.1. Properties of the view factor	225
10.4.2.2. View factors algebra	228
10.4.2.3. Point to area view factor	228
10.4.3. Digital processing of the view factor	230
10.4.4. Characteristics of the discrete model: the mesh and its control	231
10.5. Transient thermal coupled problem	232
10.6. Conclusion	234
10.7. Bibliography	234

Chapter 11. Radiation Modeling Using the Finite Element Method	237
Tom van EEKELEN	
11.1. Basic assumptions	237
11.2. Visibility and view factors	239
11.2.1. Definition	239
11.2.2. Monte Carlo-based ray-tracing method	241
11.3. Thermal balance equations	245
11.3.1. Conductive thermal balance	245
11.3.2. Radiation thermal balance	246
11.3.2.1. Gray approximation	249
11.3.2.2. Non-gray (multiband) solution	249
11.4. Finite element formulation	250
11.5. Example problems	254
11.6. Bibliography	257
Chapter 12. Dense Cities in the Tropical Zone	259
Edward NG	
12.1. Introduction	259
12.2. Access to the sky	261
12.3. Designing for daylight	266
12.4. Designing for solar access	272
12.5. Designing with solar renewable energy	281
12.6. Conclusion	287
12.7. Bibliography	288
Chapter 13. Dense Cities in Temperate Climates: Solar and Daylight Rights	291
Guedi CAPELUTO	
13.1. Introduction	291
13.1.1. Urban form and thermal comfort	291
13.2. Solar rights in urban design	292
13.3. Solar envelopes as a design tool	293
13.4. Solar envelopes as a tool for urban development	295
13.5. Regulations and applications	297
13.6. Methods of application	299
13.7. A simple design tool	300
13.8. Modeling the building shape for self-shading using the solar collection envelope	302
13.9. Daylight rights	306
13.10. Daylight access	306
13.11. Conclusions	308
13.12. Bibliography	309

Chapter 14. Solar Potential and Solar Impact	311
Frédéric MONETTE and Benoit BECKERS	
14.1. Methodological considerations	312
14.2. Definition of the residential area.	312
14.3. Estimation of irradiance and solar gains	319
14.4. Estimation of energy needs for heating.	321
14.5. Results analysis.	322
14.6. Perspectives and conclusions.	331
14.7. Acknowledgments	332
14.8. Bibliography	332
Conclusion	335
Benoit BECKERS	
APPENDICES	339
Appendix 1. Table of Europe’s Platforms (Micro- and Minisatellites) for Earth Observations	341
Théo PIRARD	
Appendix 2. Commercial Operators of Earth Observation (EO) Satellites (as of January 1, 2012)	347
Théo PIRARD	
Appendix 3. Earth’s Annual Global Mean Energy Budget	355
Benoit BECKERS	
List of Authors	357
Index	361
