<b>Preface</b> . . . . .	xi
<b>Introduction</b> . . . . .	xvii
Massimo LA SCALA and Sergio BRUNO	
<b>Chapter 1. Unbalanced Three-Phase Optimal Power Flow for the Optimization of MV and LV Distribution Grids</b> . . . . .	1
Sergio BRUNO and Massimo LA SCALA	
1.1. Advanced distribution management system for smart distribution grids . . . . .	1
1.2. Secondary distribution monitoring and control . . . . .	5
1.2.1. Monitoring and representation of LV distribution grids . . . . .	6
1.2.2. LV control resources and control architecture . . . . .	7
1.3. Three-phase distribution optimal power flow for smart distribution grids . . . . .	8
1.4. Problem formulation and solving algorithm. . . . .	11
1.4.1. Main problem formulation . . . . .	11
1.4.2. Application of the penalty method . . . . .	12
1.4.3. Definition of an unconstrained problem . . . . .	14
1.4.4. Application of a quasi-Newton method . . . . .	15
1.4.5. Solving algorithm. . . . .	18
1.5. Application of the proposed methodology to the optimization of a MV network . . . . .	20
1.5.1. Case A: optimal load curtailment . . . . .	23
1.5.2. Case B: conservative voltage regulation . . . . .	26
1.5.3. Case C: voltage rise effects . . . . .	28
1.5.4. Algorithm performance. . . . .	30

1.6. Application of the proposed methodology to the optimization of a MV/LV network . . . . .	31
1.6.1. Case D: LV network congestions . . . . .	33
1.6.2. Case E: minimization of losses and reactive control . . . . .	36
1.6.3. Algorithm performance. . . . .	37
1.7. Conclusions . . . . .	38
1.8. Acknowledgments . . . . .	38
1.9. Bibliography . . . . .	39
<b>Chapter 2. Mixed Integer Linear Programming Models for Network Reconfiguration and Resource Optimization in Power Distribution Networks . . . . .</b>	<b>43</b>
Alberto BORGHETTI	
2.1. Introduction . . . . .	43
2.2. Model for determining the optimal configuration of a radial distribution network . . . . .	44
2.2.1. Objective function and constraints of the branch currents. . . . .	46
2.2.2. Bus voltage constraints. . . . .	48
2.2.3. Bus equations . . . . .	50
2.2.4. Line equations. . . . .	52
2.2.5. Radiality constraints . . . . .	53
2.3. Test results of minimum loss configuration obtained by the MILP model. . . . .	54
2.3.1. Illustrative example. . . . .	54
2.3.2. Tests results for networks with several nodes and branches. . . . .	57
2.3.3. Comparison between the MILP solutions for the test networks with the corresponding PF calculation results relevant to the obtained optimal network configurations . . . . .	62
2.4. MILP model of the VVO problem . . . . .	65
2.4.1. Objective function . . . . .	66
2.4.2. Branch equations . . . . .	67
2.4.3. Bus equations . . . . .	69
2.4.4. Branch and node constraints . . . . .	72
2.5. Test results obtained by the VVO MILP model. . . . .	74
2.5.1. TS1 . . . . .	74
2.5.2. TS2 . . . . .	77
2.5.3. TS3 . . . . .	78
2.6. Conclusions . . . . .	85
2.7. Acknowledgments . . . . .	85
2.8. Bibliography . . . . .	86

<b>Chapter 3. The Role of Nature-inspired Metaheuristic Algorithms for Optimal Voltage Regulation in Urban Smart Grids</b> . . . . .	89
Giovanni ACAMPORA, Davide CARUSO, Alfredo VACCARO, Autilia VITIELLO and Ahmed F. ZOBAA	
3.1. Introduction . . . . .	89
3.2. Emerging needs in urban power systems . . . . .	92
3.3. Toward smarter grids . . . . .	93
3.4. Smart grids optimization . . . . .	97
3.5. Metaheuristic algorithms for smart grids optimization . . . . .	99
3.5.1. Genetic algorithm . . . . .	99
3.5.2. Random Hill Climbing algorithm . . . . .	101
3.5.3. Particle Swarm Optimization algorithm . . . . .	101
3.5.4. Evolution strategy . . . . .	103
3.5.5. Differential evolution . . . . .	106
3.5.6. Biogeography-based optimization . . . . .	108
3.5.7. Evolutionary programming . . . . .	109
3.5.8. Ant Colony Optimization algorithm . . . . .	110
3.5.9. Group Search Optimization algorithm . . . . .	113
3.6. Numerical results . . . . .	115
3.6.1. Power system test . . . . .	116
3.6.2. Real urban smart grid . . . . .	124
3.7. Conclusions . . . . .	127
3.8. Bibliography . . . . .	127
<b>Chapter 4. Urban Energy Hubs and Microgrids: Smart Energy Planning for Cities</b> . . . . .	129
Eleonora RIVA SANSEVERINO, Vincenzo Domenico GENCO, Gianluca SCACCIANOCE, Valentina VACCARO, Raffaella RIVA SANSEVERINO, Gaetano ZIZZO, Maria Luisa DI SILVESTRE, Diego ARNONE and Giuseppe PATERNÒ	
4.1. Introduction . . . . .	129
4.1.1. Microgrids versus urban energy hubs . . . . .	131
4.2. Approaches and tools for urban energy hubs . . . . .	134
4.2.1. Policy . . . . .	134
4.2.2. Analysis . . . . .	135
4.2.3. Optimal design and operation tools . . . . .	139
4.3. Methodology . . . . .	143
4.3.1. Building type and urban energy parameter specification . . . . .	143
4.3.2. Mobility simulator . . . . .	147
4.3.3. Energy simulation and electrical load estimation for buildings . . . . .	151
4.3.4. Optimization and simulation software for district . . . . .	151

4.4. Application . . . . .	152
4.4.1. Analysis . . . . .	152
4.4.2. Simulations and optimization . . . . .	160
4.4.3. Mobility and effects of policies and smart charging on peaking power . . . . .	168
4.5. Conclusions . . . . .	170
4.6 Bibliography . . . . .	171
<b>Chapter 5. Optimization of Multi-energy Carrier Systems in Urban Areas . . . . .</b>	<b>177</b>
Sergio BRUNO, Silvia LAMONACA and Massimo LA SCALA	
5.1. Introduction . . . . .	177
5.2. Optimal control strategy for a small-scale multi-carrier energy system . . . . .	180
5.2.1. The proposed architecture . . . . .	180
5.2.2. Mathematical formulation . . . . .	183
5.2.3. Test results. . . . .	190
5.3. Optimal design of an urban energy district . . . . .	198
5.3.1. Energy district for urban regeneration: the San Paolo Power Park . . . . .	199
5.3.2. Optimal design of the energy district . . . . .	201
5.3.3. Integer variables and design choices . . . . .	205
5.3.4. Mathematical formulation of the optimal control problem . . . . .	206
5.3.5. Test results. . . . .	214
5.4. Conclusions . . . . .	227
5.5. Acknowledgments . . . . .	228
5.6. Bibliography . . . . .	228
<b>Chapter 6. Optimal Gas Flow Algorithm for Natural Gas Distribution Systems in Urban Environment. . . . .</b>	<b>231</b>
Ugo STECCHI, Gaetano ABBATANTUONO and Massimo LA SCALA	
6.1. Introduction . . . . .	231
6.2. Natural gas network evolution . . . . .	236
6.3. Implementing the monitoring and control system in the “Gas Smart Grids” pilot project . . . . .	239
6.3.1. SCADA system . . . . .	240
6.3.2. Controlling FRUs’ setpoints . . . . .	244
6.4. Basic equations under steady-state conditions . . . . .	246
6.5. Gas load flow formulation . . . . .	253

---

6.6. Gas optimal flow method . . . . .	256
6.7. Optimizing turbo-expander operations. . . . .	258
6.8. Optimizing pressure profiles on the low pressure distribution grids . . . . .	262
6.9. Conclusions . . . . .	270
6.10. Acknowledgements . . . . .	270
6.11. Bibliography . . . . .	270
<b>Chapter 7. Multicarrier Energy System Optimal Power Flow. . . . .</b>	<b>273</b>
Soheil DERAFFSHI BEIGVAND, Hamdi ABDI and Massimo LA SCALA	
7.1. Introduction . . . . .	273
7.2. Basic concepts and assumptions . . . . .	276
7.2.1. MEC and energy hub . . . . .	276
7.2.2. CHP units . . . . .	279
7.2.3. General assumptions . . . . .	282
7.3. Problem formulation. . . . .	283
7.3.1. Electrical power balance equations . . . . .	283
7.3.2. Gas energy flow equation . . . . .	283
7.3.3. Modeling of energy hubs. . . . .	285
7.3.4. MECOPF problem . . . . .	286
7.4. Time varying acceleration coefficient gravitational search algorithm . . . . .	287
7.4.1. A brief comparison between the main structures of TVAC-GSA and PSO . . . . .	291
7.5. TVAC-GSA-based MECOPF problem . . . . .	292
7.6. Case study simulations and results . . . . .	294
7.7. Conclusions . . . . .	300
7.8. Appendix 1 . . . . .	301
7.9. Appendix 2 . . . . .	303
7.10. Bibliography . . . . .	305
<b>List of Authors . . . . .</b>	<b>309</b>
<b>Index . . . . .</b>	<b>311</b>
