INTRODUCTION	xi
Véronique MIGONNEY	
CHAPTER 1. HISTORY OF BIOMATERIALS	1
Véronique MIGONNEY	
1.1. Introduction	1
1.2. The evolution of biomaterials: several generations	2
1.3. Was gold the first “biomaterial”?	4
1.4. The use of glass to replace eyes	6
1.5. Wood, leather, stainless steel to replace amputated limbs	7
1.6. Conclusions	9
1.7. Bibliography	10
CHAPTER 2. DEFINITIONS	11
Véronique MIGONNEY	
2.1. Introduction	11
2.2. Definitions of a “biomaterial”	12
2.2.1. Dictionary definitions.	12
2.2.2. Definitions of biomaterials from expert scientists of the domain	13
2.2.3. Up-to-date definition of biomaterials	14
2.2.4. Extensions of the biomaterials field	14
2.3. Biomedical device	16
2.3.1. Introduction	16
2.3.2. Definition of a medical device	17

2.3.3. Classes of medical devices	18
2.4. Other definitions: implant, prosthesis, organ, graft, etc.	19
2.5. Tissue engineering, regenerative medicine, nanomedicine	20
2.5.1. Tissue engineering	20
2.5.2. Regenerative medicine	22
2.5.3. Nanomedicine	23
2.6. Bibliography	24
CHAPTER 3. MATERIALS USED IN BIOMATERIAL	
APPLICATIONS	27
Géraldine ROHMAN	
3.1. Introduction	27
3.2. Metals and alloys	31
3.2.1. Titanium and titanium-based alloys	32
3.2.2. Stainless steel	34
3.2.3. Cobalt-based alloys	35
3.2.4. Shape–memory alloys	37
3.2.5. Tantalum	38
3.2.6. Surface coating and finishing	39
3.3. Bioceramics	40
3.3.1. Nearly bioinert oxide-based ceramics	42
3.3.2. Carbon-based implants	44
3.3.3. Bioactive ceramics	45
3.3.4. Resorbable ceramics	47
3.3.5. Glass-ionomers	49
3.3.6. Surface processing of ceramic materials.	50
3.4. Polymers.	51
3.4.1. Non-degradable synthetic polymers	52
3.4.2. Synthetic and natural degradable polymers	56
3.4.3. Biomedical elastomers	67
3.4.4. Shape–memory polymers	69
3.4.5. Conjugated polymer-based biomaterials.	71
3.4.6. Polymer surfaces	73
3.5. Conclusions	74
3.6. Bibliography	74
CHAPTER 4. BIOCOMPATIBILITY AND NORMS.	83
Véronique MIGONNEY	
4.1. Introduction	83
4.2. Definitions of “biocompatibility”	84
4.2.1. Introduction to biocompatibility	84

4.2.2. History of the definitions	85
4.3. Discussion on biocompatibility	86
4.4. Host response	87
4.5. Biocompatibility – how can we evaluate it?	89
4.6. Infection, sterilization, prevention of infection	91
4.7. Norms and biocompatibility?	94
4.8. Conclusion	97
4.9. Bibliography	98
CHAPTER 5. BIOACTIVE POLYMERS AND SURFACES: A SOLUTION FOR IMPLANT DEVICES	101
Véronique MIGONNEY	
5.1. Introduction	101
5.2. History	101
5.3. Model “bioactive” polymers	103
5.3.1. Introduction	103
5.4. “Bioactive” prosthetic surfaces	106
5.4.1. Introduction	106
5.4.2. Concept and feasibility of the grafting of “bioactive” polymers onto prosthetic surfaces	107
5.4.3. Applications: (a) grafting of “bioactive” polymers onto LARS ligament prostheses and (b) grafting of “bioactive” polymers onto Ceraver total hip prostheses	109
5.5. Bibliography	113
CHAPTER 6. FUNCTIONALIZATION OF BIOMATERIALS AND APPLICATIONS	119
Céline FALENTIN-DAUDRE	
6.1. Introduction	119
6.2. Applications	121
6.2.1. “Grafting to” on stainless steel surfaces for antibacterial and antiadhesion properties	121
6.2.2. Grafting of bioactive polymers onto titanium implants	124
6.2.3. Radical graft polymerization of bioactive polymers on poly(ethylene terephthalate) (PET) for anterior cruciate ligament applications	126
6.3. Bibliography	128

CHAPTER 7. BIOMATERIAL STRUCTURES FOR ANTERIOR CRUCIATE LIGAMENT REPLACEMENT	135
Cédryck VAQUETTE	
7.1. Introduction	135
7.2. Off the shelf ligaments	136
7.2.1. Non-resorbable artificial ligaments.	136
7.2.2. Resorbable artificial ligaments	139
7.2.3. Natural materials for ACL replacement	141
7.3. Tissue-engineered constructs	142
7.3.1. Cell sheet technology	142
7.3.2. Fibrous scaffolds	143
7.3.3. Knitted/braided scaffolds	144
7.4. Concluding remarks	146
7.5. Bibliography	147
CHAPTER 8. ANIMAL MODELS FOR ORTHOPEDIC APPLICATIONS OF TISSUE ENGINEERING.	151
Véronique VIATEAU, Adeline DECAMBRON and Mathieu MANASSERO	
8.1. Introduction	152
8.2. Factors involved in choosing a model	152
8.2.1. Model relevance	153
8.2.2. Model objectivity and reproducibility	159
8.2.3. Ethical considerations	160
8.2.4. Financial considerations	161
8.2.5. Technical limitations	161
8.3. The good model for the good question research: decision-making approach	162
8.3.1. Evaluation of biocompatibility, degradation and functionality	162
8.3.2. Mechanistic studies	164
8.3.3. Proof of concept	165
8.4. Conclusions	169
8.5. Bibliography	170
CHAPTER 9. CERAMIC MATERIALS FOR DENTAL PROSTHESES	181
Amélie MAINJOT	
9.1. The place of ceramics in modern prosthetic dentistry	181
9.2. Dental ceramics systems	183
9.3. Glass ceramics	186
9.3.1. Classical glass ceramics	186

9.3.2. Reinforced glass ceramics	187
9.4. Infiltrated ceramics	190
9.5. Polycrystalline ceramics	190
9.5.1. Alumina	190
9.5.2. Zirconia	191
9.6. Perspectives	195
9.7. Bibliography	195
CHAPTER 10. DENTAL ADHESIVES.	199
Mathieu A. DERBANNE, Stéphane Le GOFF and Jean-Pierre ATTAL	
10.1. Introduction	199
10.2. The different adhesive systems	200
10.3. General principles of bonding to mineralized dental tissues	201
10.4. A word on dental bonding system composition	204
10.5. About the lifespan of dental bonding	206
10.6. Clinical illustration	208
10.7. Acknowledgments	210
10.8. Bibliography	211
CHAPTER 11. GLASS IONOMER CEMENTS: APPLICATION IN PEDIATRIC DENTISTRY.	217
Elisabeth DURSUN, Stéphane LE GOFF and Jean-Pierre ATTAL	
11.1. Introduction	217
11.2. Resin-modified and high viscous glass ionomer cements	218
11.3. Dental adhesion and surface treatments	220
11.4. Glass ionomers: application in pediatric dentistry	222
11.4.1. Indications	222
11.4.2. Longevity of restorative materials in primary teeth	224
11.4.3. Examples of clinical cases	225
11.5. Conclusion	226
11.6. Bibliography	226
LIST OF AUTHORS.	229
