Preface	ix
Chapter 1. Separation by Decantation or Precipitation in a Magnetic or Electrical Field	1
1.1. Separation in a magnetic field	1
1.1.1. Recap on magnetic fields	1
1.1.2. Intensity of magnetization and magnetic separation	2
1.1.3. Classification of solids	3
1.1.4. Processes of magnetic separation	4
1.2. Electrofilters	5
1.2.1. Description	5
1.2.2. Shaking	6
1.2.3. The transport mechanism	7
1.2.4. Apparition of sparks and counter-ionization	8
1.2.5. Geometric data	9
1.2.6. Operational equation	11
1.2.7. Calculation of the potential field	12
1.2.8. Consequences	15
1.2.9. Potential due to a uniform field and to a dielectrical particle	15
1.2.10. Celerity of the ions	19
1.2.11. Charging of particles by ion bombardment	21
1.2.12. Charging of particles by heat diffusion	22
1.2.13. Smith and MacDonald's method	24
1.2.14. The classic expression of migration velocity	26
1.2.15. Shock re-entrainment of incident particles	28
1.2.16. Separation equations	30

1.2.17. By-pass effect	35
1.2.18. Variations in resistivity of the dust	36
1.2.19. How to modify the resistivity	41
1.2.20. Electrical power consumed and yield of a dust remover	42
1.2.21. Advantages of using an electrofilter	45
1.2.22. Usage	46
Chapter 2. Gas–Liquid Separator Vats and Drums	47
2.1. Gas separators and flash drums	47
2.1.1. Definitions	47
2.1.2. Gas separators	47
2.1.3. Entrainment rate	49
2.1.4. Horizontal flash drums (degassers)	52
2.2. Separator vats	54
2.2.1. Dimensioning	54
2.3. Conclusions.	62
2.3.1. Liquid-vesicle particle sizes (estimation).	62
2.3.2. Vertical flash drums	64
2.3.3. Summary table	65
Chapter 3. Wet Dust Removal from Gases: Venturi Pulverization Column, Choice of a Dust Remover and Other Devices	67
3.1. The venturi	67
3.1.1. Description of a venturi	67
3.1.2. Usage of a venturi	69
3.1.3. Energy equation.	69
3.1.4. Equation of state	71
3.1.5. Conservation of the flowrates.	71
3.1.6. Impulsion of the gas and pressure drop in the convergent.	72
3.1.7. Pressure drop due to the entrainment of the scrubbing liquid.	73
3.1.8. Recovery of the pressure in the divergent	73
3.1.9. Size of drops of the scrubbing liquid	75
3.1.10. Separation equation.	76
3.1.11. Individual yield of the drops.	77
3.1.12. Motion of the drops.	78
3.1.13. Length of the neck	79
3.1.14. Theoretical dust capture yield.	79

3.1.15. Capture yield in practice	81
3.1.16. Integration limits for the integral I	81
3.2. Example of simulation of a venturi	82
3.2.1. Energy balance at the entrance to the convergent	82
3.2.2. Pressure at the entrance to the neck	84
3.2.3. Heat balance at the entrance to the neck	85
3.2.4. Pressure drop in the neck	86
3.2.5. Pressure at the outlet from the divergent	87
3.2.6. Diameter of the drops of scrubbing water	87
3.2.7. Length of the neck	87
3.2.8. Capture yield	88
3.3. Pulverization columns	89
3.3.1. Theoretical capture yield	89
3.3.2. Pressure drop of the gas in the column	93
3.4. Various points	96
3.4.1. Other types of wet scrubbers	96
3.4.2. General conclusion on wet scrubbing	97
3.5. Choice of an air scrubber	97
3.6. Varied calculations	98
3.6.1. Approximate calculation of the integral	98
3.6.2. Calculation of the overall heat balance for a wet scrubber	99
Chapter 4. Separation Between a Fluid and a Divided Solid Through Centrifugal Force	103
4.1. The cyclone	103
4.1.1. Principle and precautions for use	103
4.1.2. Phases and components	103
4.1.3. Presentation of the pressure drop	105
4.1.4. Pressure drop in the separation volume	105
4.1.5. Calculation of U_i/V_i (Barth's method, 1956)	106
4.1.6. Energy loss from the fluid upon return	109
4.1.7. Overall pressure drop	111
4.1.8. Pressure drop in hydrocyclones (approximate calculation)	113
4.1.9. Cunningham correction	115
4.1.10. Motion of dust particles	116
4.1.11. Residence time of fluid filaments	118
4.1.12. Capture yield for a given particle size	119
4.1.13. Simplified calculation of the yield of a gas cyclone	120

4.1.14. Simplified calculation of the yield of a hydrocyclone	122
4.1.15. Wet aerosols	124
4.1.16. Conclusions	124
4.2. The disk decanter	125
4.2.1. Description.	125
4.2.2. Velocity profile	126
4.2.3. Theoretical separation yield.	128
4.2.4. Evolution of the theoretical yield as a function of the flowrate	130
4.2.5. True separation yield.	130
4.2.6. Engorgement	132
4.2.7. Use of disk centrifuge decanters	132
4.3. Tubular decanter	134
4.3.1. Description.	134
4.3.2. The separation yield	134
4.4. Screw mud separator	137
4.4.1. Operational principles (Figure 4.9)	137
4.4.2. Velocity of the clarified liquid between the threads of the screw	139
4.4.3. Conclusions	141
4.4.4. Performances of the mud pump	142
Appendices	145
Appendix 1. Numerical Integration: the Fourth-order Runge–Kutta Method	147
Appendix 2. The Cgs Electromagnetic System	149
Appendix 3. Mohs Scale	153
Appendix 4. Definition and Aperture of Sieve Cloths	157
Bibliography	159
Index	163
