Foreword	xi
Chapter 1. Environmental, Economic and Social Context of Agro-Concretes	1
Vincent NOZAHIC and Sofiane AMZIANE	
1.1. Sustainable development, construction and materials	1
1.1.1. Environmental impacts of the construction sector.	2
1.2. Standardization and regulation: toward a global approach	3
1.2.1. Standardization and regulation in force	3
1.2.2. Limitations of the normative and regulatory framework	5
1.3. The materials: an increasingly crucial element	7
1.3.1. Role of the materials in energy consumption.	7
1.3.2. What is a low-environmental-impact material?	7
1.3.3. Constantly-changing regulations	8
1.4. The specific case of concretes made from lignocellular particles.	9
1.4.1. Development of agro-concretes in the context of France	10
1.5. What does the term “Agro-concrete” mean?	13
1.5.1. General definition.	13
1.5.2. Lignocellular resources	13
1.5.3. General characteristics of lignocellular agro-resources.	15
1.6. Conclusions.	19
1.7. Bibliography	19

Chapter 2. Characterization of Plant-Based Aggregates	27
Vincent PICANDET	
2.1. Microstructure of the shiv particles	28
2.1.1. Structure of the stem of fibrous plants.	28
2.1.2. SEM observation of hemp shiv particles	30
2.1.3. Chemistry of the cell walls	31
2.1.4. Density and porosity, in the case of hemp shiv	35
2.2. Particle Size Distribution (PSD)	36
2.2.1. General characteristics of aggregates made from fibrous plants	36
2.2.2. Fiber content.	37
2.2.3. Methods for characterizing the PSD	38
2.2.4. PSD analyses	48
2.2.5. Comparison of the results obtained by image analysis	52
2.2.6. Characterization of the geometry of the particles	57
2.2.7. Characterization of the PSD.	58
2.2.8. Conclusions	65
2.3. Compactness and compressibility.	66
2.4. Water absorption capacity	68
2.5. Bibliography	69
Chapter 3. Binders	75
Gilles ESCADEILLAS, Camille MAGNIONT, Sofiane AMZIANE and Vincent NOZAHIC	
3.1. Portland cements.	75
3.1.1. General	75
3.1.2. Production	76
3.1.3. Chemical and mineral composition	77
3.1.4. Properties	77
3.1.5. Environmental impacts	84
3.2. Lime	84
3.2.1. General	84
3.2.2. Aerial lime	86
3.2.3. Natural hydraulic limes	89
3.3. Lime-pozzolan mixtures	92
3.3.1. Natural pozzolans.	93
3.3.2. Calcined natural pozzolans: metakaolin.	96
3.3.3. Fly ash	101
3.3.4. Blast furnace slag	103

3.4. Plaster	106
3.4.1. General	106
3.4.2. Production	106
3.4.3. Chemical and mineralogical composition.	108
3.4.4. Properties	108
3.4.5. Environmental impacts	110
3.5. Summary	110
3.6. Bibliography	111
Chapter 4. Formulation and Implementation	117
Christophe LANOS, Florence COLLET, Gérard LENAIN and Yves HUSTACHE	
4.1. Objectives.	117
4.1.1. Preamble	117
4.1.2. Traditional applications	119
4.1.3. Constituents and mixture	120
4.1.4. Methods of implementation.	121
4.2. Rules of formulation	122
4.2.1. Basis of usual formulations	122
4.2.2. Influence of the proportion of paste in the mixture	124
4.2.3. Quality of the paste and water content	128
4.2.4. Homogeneity of the paste	135
4.2.5. The relationship between formulation and strength	137
4.2.6. The relationship between formulation and thermo-hydric properties	141
4.3. Examples of formulations	141
4.3.1. Origin of the data	141
4.3.2. Walling application.	141
4.3.3. Flooring application	142
4.3.4. Roofing application.	142
4.3.5. Other applications	142
4.4. Installation techniques	143
4.4.1. Building a wall using formwork	143
4.4.2. Application by spraying	143
4.4.3. Laying of a floor	144
4.4.4. Creating a roof	144
4.4.5. Other uses	145
4.5. Professional rules for buildings using hempcrete and hemp mortars	145

4.5.1. History	145
4.5.2. Principles and content of the professional regulations	146
4.6. Bibliography	152
Chapter 5. Mechanical Behavior	153
Laurent ARNAUD, Sofiane AMZIANE, Vincent NOZAHIC and Etienne GOURLAY	
5.1. Composite material	153
5.1.1. Making of the test tubes	154
5.1.2. Mechanical behavior	154
5.1.3. Effect of initial compression	157
5.1.4. Effect of the nature of the binder	159
5.1.5. Influence of the binder content	162
5.1.6. Influence of the particle size	164
5.1.7. Influence of the curing conditions	165
5.1.8. Evolution over time	166
5.1.9. Interaction between particles and binder	167
5.1.10. Anisotropic behavior	170
5.2. Modeling of the mechanical behavior	171
5.2.1. Empirical approach	171
5.2.2. Self-consistent homogenization approach	173
5.3. Toward the study of a stratified composite	174
5.4. Conclusion	175
5.5. Bibliography	176
Chapter 6. Hygrothermal Behavior of Hempcrete	179
Laurent ARNAUD, Driss SAMRI and Étienne GOURLAY	
6.1. Introduction	179
6.2. Heat conductivity	180
6.2.1. Measurement of the conductivity	181
6.2.2. Modeling of the heat conductivity in dry and humid conditions	182
6.2.3. Heat transfers	185
6.3. Hygrothermal transfers	186
6.3.1. Experimental device	186
6.3.2. Stresses	189
6.3.3. Phase changes	191
6.3.4. Hygrothermal transfers	194
6.3.5. Role of coating products applied to hempcrete	196
6.3.6. Conclusions	200

6.4. Thermal characterization of various construction materials	201
6.4.1. Autoclaved aerated concrete	202
6.4.2. Vertically perforated brick	204
6.4.3. Hempcrete	205
6.4.4. Conclusions	210
6.5. Modeling of coupled heat- and mass transfers	211
6.5.1. Introduction	211
6.5.2. Transfer laws	212
6.5.3. Transfer model: the Kunzel model.	216
6.5.4. Determination of the transfer coefficients	217
6.5.5. Numerical modeling	222
6.6. Conclusions.	235
6.7. Bibliography	238
Chapter 7. Acoustical Properties of Hemp Concretes	243
Philippe GLÉ, Emmanuel GOURDON and Laurent ARNAUD	
7.1. Introduction.	243
7.2. Acoustical properties of the material on the basis of the main mechanisms	244
7.2.1. Influence of the components	244
7.2.2. Influence of the casting method	249
7.3. Modeling the acoustical properties	252
7.3.1. Physical analysis of the acoustical properties being measured	253
7.3.2. The adapted double porosity model and its parameters.	255
7.3.3. Experimental validation of the model	257
7.4. Application of the model to the acoustical characterization of shiv	258
7.4.1. Porosity of shiv	258
7.4.2. Resistivity	262
7.5. Conclusion	264
7.6. Bibliography	264
Chapter 8. Plant-Based Concretes in Structures: Structural Aspect – Addition of a Wooden Support to Absorb the Strain	267
Philippe MUNOZ and Didier PIPET	
8.1. Introduction.	267
8.2. Preliminary test	269
8.2.1. Description of the panel	269

x Bio-aggregate-based Building Materials

8.2.2. Putting the panel in place on the bracing bank	270
8.2.3. Longitudinal loading and measurement of the movements	271
8.2.4. Behavior of the test bank	273
8.2.5. Behavior of the wooden panel	274
8.3. Test on a composite panel of a wooden skeleton and hempcrete	276
8.3.1. Description of the panel	276
8.3.2. Emplacement of the panel on the bracing bank	276
8.3.3. Vertical loading	279
8.3.4. Longitudinal loading and measurement of the movements	280
8.3.5. Running of the test	281
8.3.6. Feature of the ruin of the panel	283
8.4. Results and comparative analysis	285
8.5. Conclusions and reflections	287
8.6. Acknowledgements	288
8.7. Bibliography	288

Chapter 9. Examination of the Environmental Characteristics of a Banked Hempcrete Wall on a Wooden Skeleton, by Lifecycle

Analysis: Feedback on the LCA Experiment from 2005 289

Marie-Pierre BOUTIN and Cyril FLAMIN

9.1. Introduction.	289
9.2. Description of the products studied.	291
9.3. Method for environmental evaluation of bio-sourced materials	292
9.4. Lifecycle Analysis on hempcrete – methodology, working hypotheses and results	294
9.4.1. Delimitation of the system under study	294
9.4.2. Inventory analysis	298
9.4.3. Impact evaluation	303
9.4.4. Results and interpretation of the lifecycle	305
9.5. Interpretations of the lifecycle, conclusions and reflections	306
9.6. Bibliography	310
