

Index

A

- airplane, 4
- airship, 4
- analog complementary filter, 79
- armature current, 133
- artificial vision, 41
- autonomous aircraft, 301

B

- bounded control, 59
- brushless DC motor, 133

C

- C-Plane UAV, 79
- camera calibration, 173
- computer vision, 191
- Coriolis
 - forces, 157
 - matrix, 256

D

- delta UAV, 115
- direct visual servoing, 169
- dynamic model, 6, 79, 115
 - PVTOL aircraft, 24
- dynamic uncertainty, 154

E

- eight-rotor
 - rotorcraft, 238
 - UAV, 249
- embedded
 - flight system, 41

- saturation functions, 21

- saturation functions, 25
- system, 79, 115

Euler-Lagrange

- approach, 9, 181
- formulation, 115

- extended Kalman filter, 269

F

- flapping-wing UAV, 5
- flight plan, 301

G

- genetic algorithms (GAs), 160
- GPS (Global Positioning System), 168

H

- homemade IMU, 79
- homogenous transformation approach, 175
- homography, 174
- horizontal flight, 79
- hover flight, 79
- hovering platforms, 153

I

- image-based visual servoing, 171
- improving attitude stabilization, 133
- IMU (inertial measurement unit), 168
- indirect visual servoing, 169
- inertial measurement unit (IMU), 162
- inertial navigation, 286

inner-outer loop controller, 41

K

Kalman filters, 266

keypoints matching algorithm, 245

L

Levenberg-Marquardt (LM), 177

linear

control, 79

Kalman filter, 266

linear matrix inequalities (LMIs), 160

longitudinal dynamics, 79

Lucas-Kanade approach, 247

M

Matlab Simulink™, 160

mini-rotorcraft UAV, 153

N

Newton-Euler

approach, 7

equations, 79

nonlinear control, 41, 79, 191

PVTOL aircraft, 21

nonlinear dynamics, 59

O

object detection, 191

optic flow, 210

optical flow (OF), 195, 237, 246

optical flow-based control, 245

optimal trajectories, 301

P

parametric uncertainty, 154

perspective of n -points approach, 177

plane-pose-based approach, 179

pose estimation, 177

position-image visual servoing, 172

pulse wide modulators (PWMs), 162

PVTOL aircraft

control strategies, 33

nonlinear control, 25

Q

quad-rotor UAV, 133

quaternion approach, 10

R

RANdom SAmple Consensus (RANSAC),
241

robot localization, 285

robust

control design, 153, 158

stability analysis, 154

rotational

dynamics, 79

subsystem model, 255

S

Scale Invariant Features Tracking (SIFT),
241, 245

sensor fusion, 191

single

rotor configuration, 2

tilting rotor, 115

singular value decomposition (SVD), 241

spherical simplex sigma-point Kalman
filters, 278

stereo vision, 237

structure from motion, 212

T

T-Plane UAV, 115

tail-sitter UAV, 79

three-dimensional localization, 265

tilting rotors, 59, 115

tracking, 191

transition maneuver, 79

translational dynamics, 79

triple tilting rotor, 115

twin rotor configuration, 3

two-plane calibration approach, 173, 185

U

unmanned aerial vehicles (UAV), 1, 79

unscented Kalman filter, 270

V

visual servoing, 168

VTOL

aircraft, 41, 191

rotorcraft, 59

vehicle, 79, 115
