GENERAL INTRODUCTION Francis BALESTRA	xv
PART 1. SILICON NANOWIRE BIOCHEMICAL SENSORS	1
PART 1. INTRODUCTION Per-Erik HELLSTRÖM and Mikael ÖSTLING	3
CHAPTER 1. FABRICATION OF NANOWIRES Jens BOLTEN, Per-Erik HELLSTRÖM, Mikael ÖSTLING, Céline TERNON and Pauline SERRE	5
1.1. Introduction	5
1.2. Silicon nanowire fabrication with electron beam lithography	6
1.2.1. Key requirements	6
1.2.2. Why electron beam lithography?	7
1.2.3. Lithographic requirements	8
1.2.4. Tools, resist materials and development processes	9
1.2.5. Exposure strategies and proximity effect correction	10
1.2.6. Technology limitations and how to circumvent them	11
1.3. Silicon nanowire fabrication with sidewall transfer lithography	14
1.4. Si nanonet fabrication	17
1.4.1. Si NWs fabrication	18
1.4.2. Si nanonet assembling	19
1.4.3. Si nanonet morphology and properties	19
1.5. Acknowledgments	21
1.6. Bibliography	21

CHAPTER 2. FUNCTIONALIZATION OF SI-BASED NW FETs FOR DNA DETECTION . . .	25
Valérie STAMBOULI, Céline TERNON, Pauline SERRE and Louis FRADETAL	
2.1. Introduction	25
2.2. Functionalization process	27
2.3. Functionalization of Si nanonets for DNA biosensing	28
2.3.1. Detection of DNA hybridization on the Si nanonet by fluorescence microscopy	31
2.3.2. Preliminary electrical characterizations of NW networks	33
2.4. Functionalization of SiC nanowire-based sensor for electrical DNA biosensing	35
2.4.1. SiC nanowire-based sensor functionalization process	35
2.4.2. DNA electrical detection from SiC nanowire-based sensor	38
2.5. Acknowledgments	39
2.6. Bibliography	40
CHAPTER 3. SENSITIVITY OF SILICON NANOWIRE BIOCHEMICAL SENSORS.	43
Pierpaolo PALESTRI, Mireille MOUIS, Aryan AFZALIAN, Luca SELMI, Federico PITTINO, Denis FLANDRE and Gérard GHIBAUDO	
3.1. Introduction	43
3.1.1. Definitions.	43
3.1.2. Main parameters affecting the sensitivity.	47
3.2. Sensitivity and noise.	47
3.3. Modeling the sensitivity of Si NW biosensors	50
3.3.1. Modeling the electrolyte	52
3.4. Sensitivity of random arrays of 1D nanostructures	54
3.4.1. Electrical characterization	55
3.4.2. Low-frequency noise characterization	56
3.4.3. Simulation of electron conduction in random networks of 1D nanostructures	56
3.4.4. Discussion	59
3.5. Conclusions	59
3.6. Acknowledgments	60
3.7. Bibliography	60
CHAPTER 4. INTEGRATION OF SILICON NANOWIRES WITH CMOS	65
Per-Erik HELLSTRÖM, Ganesh JAYAKUMAR and Mikael ÖSTLING	
4.1. Introduction	65
4.2. Overview of CMOS process technology.	66
4.3. Integration of silicon nanowire after BEOL	66
4.4. Integration of silicon nanowires in FEOL	67
4.5. Sensor architecture design	69

4.6. Conclusions	71
4.7. Bibliography	72
CHAPTER 5. PORTABLE, INTEGRATED LOCK-IN-AMPLIFIER-BASED SYSTEM FOR REAL-TIME IMPEDIMETRIC MEASUREMENTS ON NANOWIRES BIOSENSORS . . .	73
Michele ROSSI and Marco TARTAGNI	
5.1. Introduction	73
5.2. Portable stand-alone system	74
5.3. Integrated impedimetric interface	76
5.4. Impedimetric measurements on nanowire sensors	78
5.5. Bibliography	81
PART 2. NEW MATERIALS, DEVICES AND TECHNOLOGIES FOR ENERGY HARVESTING.	83
PART 2. INTRODUCTION	85
Enrico SANGIORGI	
CHAPTER 6. VIBRATIONAL ENERGY HARVESTING.	89
Luca LARCHER, Saibal ROY, Dhiman MALLICK, Pranay PODDER, Massimo DE VITTORIO, Teresa TODARO, Francesco GUIDO, Alessandro BERTACCHINI, Ronan HINCHEM, Julien KERAUDY and Gustavo ARDILA	
6.1. Introduction	89
6.2. Piezoelectric energy transducer.	91
6.2.1. Introduction	91
6.2.2. State-of-the-art devices and materials.	92
6.2.3. MEMS piezoelectric vibration energy harvesting transducers	95
6.2.4. RMEMS prototypes characterization and discussions of experimental results	102
6.2.5. Near field characterization techniques	104
6.2.6. Dedicated electro-mechanical models for piezoelectric transducer design.	106
6.3. Electromagnetic energy transducers	109
6.3.1. Introduction	109
6.3.2. State-of-the-art devices and materials.	109
6.3.3. Vibration energy harvester exploiting both the piezoelectric and electromagnetic effect.	122
6.3.4. Device design	125
6.4. Bibliography	128

CHAPTER 7. THERMAL ENERGY HARVESTING	135
Mireille MOUIS, Emigdio CHÁVEZ-ÁNGEL, Clivia SOTOMAYOR-TORRES, Francesc ALZINA, Marius V. COSTACHE, Androula G. NASSIOPOULOU, Katerina VALALAKI, Emmanouel HOURDAKIS, Sergio O. VALENZUELA, Bernard VIALA, Dmitry ZAKHAROV, Andrey SHCHEPETOV and Jouni AHOPELTO	
7.1. Introduction	135
7.1.1. Basics of thermoelectric conversion.	136
7.1.2. Strategies to increase ZT	137
7.1.3. Heavy-metal-free TE generation.	140
7.1.4. Alternatives to TE harvesting for self-powered solid-state microsystems.	141
7.2. Thermal transport at nanoscale	142
7.2.1. Brief review of nanoscale thermal conductivity	143
7.2.2. The effect of phonon confinement.	146
7.2.3. Fabrication of ultrathin free-standing silicon membranes	153
7.2.4. Advanced methods of characterizing phonon dispersion, lifetimes and thermal conductivity	156
7.3. Porous silicon for thermal insulation on silicon wafers.	172
7.3.1. Introduction	172
7.3.2. Thermal conductivity of nanostructured porous Si.	172
7.3.3. Thermal isolation using thick porous Si layers.	176
7.3.4. Thermoelectric generator using porous Si thermal isolation	177
7.4. Spin dependent thermoelectric effects	185
7.4.1. Physical principle and interest for thermal energy harvesting.	186
7.4.2. Demonstration of the magnon drag effect	188
7.5. Composites of thermal shape memory alloy and piezoelectric materials	192
7.5.1. Introduction	192
7.5.2. Physical principle and interest for thermal energy harvesting.	193
7.5.3. Novelty and realizations	194
7.5.4. Theoretical considerations	195
7.5.5. Examples of use.	196
7.5.6. Summary of composite harvesting by the combination of SMA and piezoelectric materials	204
7.6. Conclusions	204
7.7. Bibliography	205
CHAPTER 8. NANOWIRE BASED SOLAR CELLS	221
Mauro ZANUCCOLI, Anne KAMINSKI-CACHOPO, Jérôme MICHALLON, Vincent CONSONNI, Igar SEMENIKHIN, Mehdi DAANOUNE, Frédérique DUCROQUET, David KOHEN, Christine MORIN and Claudio FIEGNA	
8.1 Introduction	221
8.2. Design of NW-based solar cells	223

8.2.1. Geometrical optimization of NW-based solar cells by numerical simulations	223
8.2.2. TCAD simulation of NW-based solar cells	230
8.3. Fabrication and opto-electrical characterization of NW-based solar cells	235
8.3.1. Elaboration of NW-based solar cells	235
8.3.2. Opto-electrical characterization of NW-based solar cells	236
8.4 Conclusion	243
8.5 Acknowledgments	243
8.6 Bibliography	243
CHAPTER 9. SMART ENERGY MANAGEMENT AND CONVERSION	249
Wensi WANG, James F. ROHAN, Ningning WANG, Mike HAYES, Aldo ROMANI, Enrico MACRELLI, Michele DINI, Matteo FILIPPI, Marco TARTAGNI and Denis FLANDRE	
9.1. Introduction	249
9.2. Power management solutions for energy harvesting devices	251
9.2.1. Ultra-low voltage thermoelectric energy harvesting	251
9.2.2. Sub-1mW photovoltaic energy harvesting	256
9.2.3. Piezoelectric and micro-electromagnetic energy harvesting	260
9.2.4. DC/DC power management for future micro-generator	262
9.3. Sub-mW energy storage solutions	266
9.4. Conclusions	270
9.5. Bibliography	271
PART 3. ON-CHIP ELECTRONIC COOLING	277
CHAPTER 10. TUNNEL JUNCTION ELECTRONIC COOLERS	279
Martin PREST, James RICHARDSON-BULLOCK, Terry WHALL, Evan PARKER and David LEADLEY	
10.1. Introduction and motivation	279
10.1.1. Existing cryogenic technology	280
10.2. Tunneling junctions as coolers	281
10.2.1. The NIS junction	281
10.2.2. Cooling power	284
10.2.3. Thermometry	286
10.2.4. The superconductor-insulator-normal metal-insulator-superconductor (SINIS) structure	287
10.2.5. Double junction superconductor-silicon-superconductor (SSmS) cooler	288
10.3. Limitations to cooling	289
10.3.1. States within the superconductor gap	290
10.3.2. Joule heating	291
10.3.3. Series resistance	291
10.3.4. Quasi-particle-related heating	293

10.3.5. Andreev reflection	295
10.4. Heavy fermion-based coolers	297
10.5. Summary	299
10.6. Bibliography	300
CHAPTER 11. SILICON-BASED COOLING ELEMENTS.	303
David LEADLEY, Martin PREST, Jouni AHOPELTO, Tom BRIEN, David GUNNARSSON, Phil MAUSKOPF, Juha MUHONEN, Maksym MYRONOV, Hung NGUYEN, Evan PARKER, Mika PRUNNILA, James RICHARDSON-BULLOCK, Vishal SHAH, Terry WHALL and Qing-Tai ZHAO	
11.1. Introduction to semiconductor-superconductor tunnel junction coolers	303
11.2. Silicon-based Schottky barrier junctions	304
11.3. Carrier-phonon coupling in strained silicon	308
11.3.1. Measurement of electron-phonon coupling constant	312
11.4. Strained silicon Schottky barrier mK coolers	315
11.5. Silicon mK coolers with an oxide barrier [GUN 13]	318
11.5.1. Reduction of sub-gap leakage	318
11.5.2. Effects of strain	319
11.6. The silicon cold electron bolometer	321
11.7. Integration of detector and electronics	324
11.8. Summary and future prospects	325
11.9. Acknowledgments	327
11.10 Bibliography	327
CHAPTER 12. THERMAL ISOLATION THROUGH NANOSTRUCTURING.	331
David LEADLEY, Vishal SHAH, Jouni AHOPELTO, Francese ALZINA, Emigdio CHÁVEZ-ÁNGEL, Juha MUHONEN, Maksym MYRONOV, Androula G. NASSIOPOULOU, Hung NGUYEN, Evan PARKER, Jukka PEKOLA, Martin PREST, Mika PRUNNILA, Juan Sebastian REPARAZ, Andrey SHCHEPETOV, Clivia SOTOMAYOR-TORRES, Katerina VALALAKI and Terry WHALL	
12.1. Introduction	331
12.2. Lattice cooling by physical nanostructuring	331
12.3. Porous Si membranes as cryogenic thermal isolation platforms	337
12.3.1. Porous Si micro-coldplates	337
12.3.2. Porous Si thermal conductivity	339
12.4. Crystalline membrane platforms	343
12.4.1. Strained germanium membranes	343
12.4.2. Thermal conductance measurements in Si and Ge membranes	350
12.4.3. Epitaxy-compatible thermal isolation platform	355
12.5. Summary of thermal conductance measurements	355
12.6. Acknowledgments	358
12.7. Bibliography	358

PART 4. NEW MATERIALS, DEVICES AND TECHNOLOGIES FOR RF APPLICATIONS . . .	365
PART 4. INTRODUCTION	367
Androula G. NASSIOPOULOU	
CHAPTER 13. SUBSTRATE TECHNOLOGIES FOR SILICON-INTEGRATED RF AND MM-WAVE PASSIVE DEVICES.	373
Androula G. NASSIOPOULOU, Panagiotis SARAFIS, Jean-Pierre RASKIN, Hanza ISSA, Philippe FERRARI	
13.1. Introduction	373
13.2. High-resistivity Si substrate for RF	374
13.2.1. Losses along coplanar waveguide transmission lines	375
13.2.2. Crosstalk	380
13.2.3. Nonlinearities along CPW lines	384
13.3. Porous Si substrate technology	385
13.3.1. General properties of porous Si	386
13.3.2. Dielectric properties of porous Si	389
13.3.3. Broadband electrical characterization of CPWT Lines on porous Si	393
13.3.4. Inductors on porous Si	397
13.3.5. Antennas on porous Si	399
13.4. Comparison between HR Si and local porous Si substrate technologies	400
13.4.1. Comparison of similar CPW TLines on different substrates.	400
13.4.2. Comparison of inductors on different RF substrates	404
13.5. Design of slow-wave CPWs and filters on porous silicon	404
13.5.1. Slow-wave CPW TLines on porous Si.	405
13.5.2. Simulation results for S-CPW TLines	406
13.5.3. Stepped impedance low-pass filter on porous silicon	408
13.5.4. Simulation results for filters	409
13.6. Conclusion	411
13.7. Acknowledgments	411
13.8. Bibliography	411
CHAPTER 14. METAL NANOLINES AND ANTENNAS FOR RF AND MM-WAVE APPLICATIONS	419
Philippe BENECH, Chuan-Lun HSU, Gustavo ARDILA, Panagiotis SARAFIS and Androula G. NASSIOPOULOU	
14.1. Introduction	419
14.2. Metal nanowires (nanolines)	420
14.2.1. General properties	420
14.2.2. Transmission nanolines in microstrip configuration: characterization and modeling	426
14.2.3. Transmission nanolines in CPW configuration: fabrication, characterization and modeling	430

14.2.4. Characterization up to 200 GHz	440
14.3. Antennas	441
14.3.1. On-chip antennas: general	441
14.3.2. On-chip antenna characterization method	443
14.3.3. Measurement results.	444
14.3.4. Discussion on antenna results	451
14.4. Conclusion	451
14.5. Acknowledgments	452
14.6. Bibliography	452
CHAPTER 15. NANOSTRUCTURED MAGNETIC MATERIALS FOR HIGH-FREQUENCY APPLICATIONS	457
Saibal ROY, Jeffrey GODSELL and Tuhin MAITY	
15.1. Introduction	457
15.2. Power conversion and integration.	457
15.3. Materials and integration	459
15.4. Controlling the magnetic properties	463
15.5. Magnetic properties of nanocomposite materials	467
15.6. Magnetic properties of nanomodulated continuous films.	470
15.7. Conclusion	478
15.8. Bibliography	479
LIST OF AUTHORS	485
INDEX.	493
