

Table of Contents

Chapter 1. Vacuum Evaporation.	1
Aimé RICHARDT and Isabelle RICHARDT	
1.1. Definitions and theoretical bases: notions of vapor pressure and mean free path	1
1.1.1. Thermodynamic and kinetic bases	2
1.1.2. Equilibrium vapor pressure	2
1.1.3. Notions and values of vapor pressures	3
1.1.4. Mean free path of gas molecules	6
1.2. Theory of thermal evaporation, mechanisms, emission laws. Nucleation and growth of thin layers deposited by evaporation.	8
1.2.1. Theory of thermal evaporation	8
1.2.2. Evaporation rate.	8
1.2.3. Evaporation mechanisms	11
1.2.4. Cosinusoidal law of emission.	14
1.2.5. Theory of the nucleation and of the development of thin layers deposited by evaporation	17
1.2.6. Evolution of the microstructure of deposits and zone-structure models (M-D diagram)	20
1.3. Deposition procedures	22
1.3.1. General points	22
1.3.2. Joule effect evaporation sources	23
1.3.3. Plasma and electron bombardment evaporation sources. Arc evaporation; evaporation by laser ablation	29
1.4. Examples of industrial applications of vacuum evaporations	41
1.4.1. Molecular beam epitaxy (MBE)	41
1.4.2. Optical thin films	45
1.4.3. Practice of industrial aluminum evaporations	48
1.5. Bibliography	52

Chapter 2. Cathode Sputtering	53
Yves PAULEAU	
2.1. Introduction	53
2.2. Principles of direct current diode cathode sputtering	54
2.3. Sputtering mechanisms	56
2.4. Sputtering yield	58
2.5. Characterization of ejected particles	64
2.5.1. Nature of particles ejected from the target	64
2.5.2. Energy of sputtered particles	65
2.5.3. Angular distribution of the flux of sputtered particles	66
2.6. Thin layer deposition by cathode sputtering.	67
2.6.1. Objectives	67
2.6.2. Optimization of deposition conditions	67
2.7. Processes of low pressure sputtering deposition	74
2.7.1. D.C triode configuration sputtering system.	74
2.7.2. Sputtering using high frequency excited plasma.	75
2.7.3. “Magnetron” sputtering	76
2.7.4. Radiofrequency (RF) or high-frequency (HF) sputtering	78
2.8. Deposition processes by reactive sputtering.	80
2.9. Characteristics of thin films deposited by cathode sputtering	87
2.9.1. Nucleation and growth of layers	87
2.9.2. Microstructure of films deposited by sputtering.	88
2.9.3. Purity of sputter deposited layers	88
2.9.4. Adherence of sputter deposited layers.	88
2.10. Conclusion	89
2.11. Bibliography	89
Chapter 3. Ion Implantation and Ion Beam Assisted Deposition	93
Jean-Paul RIVIÈRE	
3.1. Introduction	93
3.2. General aspects of ion-solid interaction	95
3.2.1. Description of phenomena	95
3.2.2. Advantages and limitations of ion implantation	98
3.3. Physical mechanisms and principles of the different techniques	99
3.3.1. Ion implantation	99
3.3.2. Ion mixing	111
3.3.3. Ion beam assisted deposition	114
3.4. Surface modifications by ion implantation	118
3.4.1. Formation of new phases	118
3.4.2. Improving wear resistance	119
3.4.3. Improving oxidation resistance and corrosion	122
3.5. Coatings produced by ion beam assistance	126

3.5.1. Low energy assisted deposits	127
3.5.2. Dynamic ion mixing coatings	128
3.6. Evolution of ion implantation technique	131
3.6.1. Motivations	131
3.6.2. Plasma immersion implantation	132
3.6.3. High-flux low energy diffusion implantation	133
3.7. Conclusion	134
3.8. Bibliography	134
Chapter 4. Chemical Vapor Deposition: Principles and Applications	139
Elisabeth BLANQUET and Frédéric SCHUSTER	
4.1. Introduction.	139
4.2. CVD processes.	140
4.2.1. CVD reactors	140
4.2.2. Precursors and introduction methods	142
4.3. Process modeling	143
4.3.1. Description of phenomena	143
4.3.2. Description of limiting steps	144
4.3.3. Implementation of macroscopic models	149
4.3.4. Thermodynamic simulation of CVD of a (Ti,Al)N metastable phase	150
4.4. Industrial applications.	152
4.4.1. Introduction	152
4.4.2. Applications of CVD process in the nuclear field	153
4.4.3. Industrial applications of plasma assisted CVD process	154
4.5. List of symbols.	157
4.6. Bibliography	157
Chapter 5. Laser or Plasma Assisted Chemical Vapor Deposition	163
Jean DESMAISON, Christelle TIXIER and Pascal TRISTANT	
5.1. From thermal CVD to assisted CVD	163
5.2. Plasma assisted CVD	165
5.2.1. Principle	165
5.2.2. Effect of the excitation frequency	167
5.2.3. Influence of the discharge position in relation to the excitation structure	173
5.2.4. Effect of using a magnetic field	176
5.2.5. Influence of the position of the substrate with regard to the discharge.	179
5.2.6. Plasma modeling and characterization	180
5.2.7. Applications	183
5.2.8. Case study	186
5.3. Laser assisted CVD	188

5.3.1. Principle	188
5.3.2. Different configurations	189
5.3.3. Applications	189
5.3.4. Reactive laser ablation	191
5.4. Conclusion	192
5.5. Bibliography	192
Chapter 6. Coupled Phenomena Modeling in CVD	199
Michel PONS and Francis BAILLET	
6.1. Introduction.	199
6.2. Modeling and simulation paths of CVD process	200
6.2.1. Principle	200
6.2.2. Thermodynamic approach.	202
6.2.3. Kinetic approach	202
6.2.4. Simultaneous transfers approach	203
6.2.5. Conclusion.	206
6.3. Macroscopic modeling of reactive transport phenomena	206
6.3.1. General hypotheses.	206
6.3.2. General equations.	207
6.3.3. Reactions.	211
6.3.4. Conclusion – commercial codes	218
6.4. Databases, preliminary calculations	219
6.4.1. Thermodynamic data.	219
6.4.2. Kinetic data	222
6.4.3. Conclusion.	226
6.5. Simulation of reactors.	226
6.5.1. Vertical reactors.	227
6.5.2. Horizontal reactors	236
6.6. Conclusion	239
6.7. Symbols used.	241
6.8. Bibliography	243
Chapter 7. Gas Phase Carburation and Carbonitriding of Steels	251
Jacky DULCY and Michel GANTOIS	
7.1. Introduction.	251
7.2. Basic principle of a gas-solid heterogenous reaction	253
7.2.1. Physicochemical mechanisms of the carbon transfer by a heterogenous gas-solid reaction	253
7.2.2. Definition of mass transfer coefficient	255
7.2.3. Material transfer in austenitic phase	257
7.2.4. Conclusion.	258

7.3. Carbon monoxide cementation (traditional procedures)	259
7.3.1. Generation of atmospheres	259
7.3.2. Definition of carbon potential	261
7.3.3. Influence of alloying elements on the carbon potential	265
7.3.4. Interface physicochemical processes	266
7.3.5. Solid state carbon transfer	268
7.4. Hydrocarbon cementation (recent procedures)	270
7.4.1. Physicochemical mechanisms	270
7.4.2. Transfer of solid state carbon	272
7.5. Industrial implementation of solid-gas cementation reactions of steels	275
7.5.1. Thermal and hydrodynamic characteristics of reactors	275
7.5.2. Cementation at atmospheric pressure	280
7.5.3. Hydrocarbon cementation at a pressure lower than atmospheric pressure	284
7.6. Heat treatments after cementation or carbonitriding	285
7.6.1. Cementation and carbonitriding steels	285
7.6.2. Complementary heat treatments	289
7.6.3. Structural defects in the surface layer	290
7.6.4. Industrial processes of quenching deformations	292
7.7. Industrial processes	296
7.7.1. "Load" furnaces	297
7.7.2. Continuous furnaces	298
7.7.3. Furnaces operating at reduced pressures	298
7.7.4. Example of use	299
7.8. Conclusion	299
7.9. Bibliography	300
Chapter 8. Ion Nitriding and Afterglow Treatments	303
Thierry BELMONTE, Thierry CZERWIEC and Henri MICHEL	
8.1. Ion nitriding and applications	303
8.1.1. Introduction	303
8.1.2. Metallurgical principles of pure iron and iron-based alloys nitriding	304
8.1.3. Principle and production of plasma	311
8.1.4. Fundamental mechanisms of diode discharges	313
8.1.5. Practical and industrial aspects	322
8.1.6. Technological developments in ion nitriding	325
8.1.7. New metallurgical applications for ion nitriding	330
8.2. Afterglow treatments	331
8.2.1. Introduction	331
8.2.2. Implementation of spatial discharges	332
8.2.3. Early and late afterglows	334

8.2.4. Late afterglows as active species sources	336
8.2.5. Afterglow treatments	343
8.3. Bibliography	348
Chapter 9. Pack Cementation	361
Alain GALERIE and Yves WOUTERS	
9.1. Principle	361
9.2. Fundamental aspects	362
9.2.1. Chemistry of the cement	362
9.2.2 Gas-substrate reaction	366
9.2.3. Mass transport	367
9.3. Composition and morphology of the cemented layer	370
9.4. Industrial applications	371
9.4.1. Nickel-based superalloy aluminizing	371
9.4.2. Chromizing and chromaluminizing irons and steels	374
9.4.3. Other applications	374
9.5. Evolutions of the process	376
9.5.1. “Out of pack” cementations	377
9.5.2. “Gaseous” cementations	378
9.6. Bibliography	379
List of authors	385
Index	389
