Foreword	ix
Acknowledgements	xi
Introduction	xiii
Part 1. Basic Concepts	1
Chapter 1. Connected Objects	3
1.1. What is a connected object?	3
1.2. The different categories of connected objects.	5
1.2.1. Connected objects having the status of connected medical devices.	5
1.2.2. Connected objects not having the status of medical devices; they do not necessarily have a medical purpose.	7
1.3. The actors in the ecosystem of a connected medical device	8
Chapter 2. The Digitization of Health	11
2.1. Definitions of basic concepts	11
2.1.1. The quantified self	11
2.1.2. Personal data.	12
2.1.3. Telemedicine	12
2.2. Toward a convergence of the connected objects market	14
2.2.1. Estimates from the connected objects market	14
2.2.2. Estimates from the connected health market	15

Part 2. Analysis and Cartography of the Risks Linked to Connected Object Usage	17
Chapter 3. Project Management	19
3.1. Research question	19
3.2. Goal of the study	20
3.3. Scope	20
3.4. Role of the risk manager	21
Chapter 4. Comprehensive Risk Analysis Process	23
4.1. Comprehensive risk analysis system	23
4.1.1. Functional analysis	23
4.1.2. Value and analysis notion approach	32
4.1.3. Risk-value balance	33
4.1.4. User experience	34
4.1.5. Danger cartography	35
4.1.6. Cartography of dangerous situations	40
4.2. CRA scenario	44
4.2.1. Scale of gravity	44
4.2.2. Scale of likelihood	44
4.2.3. Criticality matrix	47
4.2.4. Scale of loss	49
4.2.5. Scale of effort	50
Chapter 5. Results of the Scenario and Dangerous Situation Analysis	53
5.1. Dangerous situation analysis	53
5.1.1. By function	53
5.1.2. By danger	54
5.2. Scenario analysis	54
5.2.1. Measurements already implemented by certain manufacturers	54
5.2.2. Scenario estimation by initial criticality	55
5.2.3. Scenario estimation by residual criticality	56
Chapter 6. Comprehensive Risk Analysis by Subfunction and by Danger	57
6.1. By subfunction	57
6.1.1. Decision diagram	57
6.1.2. Kiviat diagram	58
6.1.3. Farmer diagram	59

6.2. By danger	60
6.2.1. Decision diagram	60
6.2.2. Kiviati diagram	62
6.2.3. Farmer diagram	65
Chapter 7. The Scales of Loss and Effort.	67
7.1. Analysis of the scales loss and effort	67
7.2. List of major risks	68
7.3. Risk-reduction action plan and catalogue of security parameters	69
Chapter 8. Comprehensive Approach	73
8.1. Contribution from the comprehensive risk analysis process	73
8.2. New health challenges: risks emerging from the use of connected medical devices	74
Part 3. Connected Objects, a New Era for Scientific Revolution	77
Chapter 9. Prospects in Health	79
9.1. Connected medical devices, participatory contribution to research	79
9.1.1. Sorting rare pathologies at the border: the case of ebola	79
9.2. Epidemiological monitoring	80
9.3. The patient becomes an active member of the healthcare team	80
9.4. Development of online portals (patient portal) with or without subscriptions	81
Chapter 10. A Step Towards the Augmented Human.	83
10.1. Transhumanism.	83
10.2. The augmented human	85
10.3. Some applications of connected health and nanotechnologies to move toward the augmented human	86
Part 4. Methodological Approach	89
Chapter 11. Functional Need Analysis	91
11.1. Functional need analysis	91
11.1.1. Definition of the octopus diagram	91
11.1.2. Function validation	92

11.1.3. Product characterization	94
11.1.4. Appreciation criteria	95
Chapter 12. Comprehensive Risk Scenario Analysis Cartography	97
12.1. Method.	97
Chapter 13. Risk-Reduction Action Forms	135
13.1. Risk-reduction actions.	135
13.1.1. Synthesis of the risk-reduction actions	135
13.1.2. Number of risk-reduction actions per system element and danger.	136
13.2. List of the risk-reduction action forms	137
13.2.1. Number of security parameters per system element and danger.	154
Conclusion	159
Glossary	161
Bibliography	165
Index	169
