

Table of Contents

Notations	xiii
Introduction	xvii
Chapter 1. A Guided Tour	1
1.1. Introduction	1
1.2. Wavelets	2
1.2.1. General aspects	2
1.2.2. A wavelet	6
1.2.3. Organization of wavelets	8
1.2.4. The wavelet tree for a signal	10
1.3. An electrical consumption signal analyzed by wavelets	12
1.4. Denoising by wavelets: before and afterwards	14
1.5. A Doppler signal analyzed by wavelets	16
1.6. A Doppler signal denoised by wavelets	17
1.7. An electrical signal denoised by wavelets	19
1.8. An image decomposed by wavelets	21
1.8.1. Decomposition in tree form	21
1.8.2. Decomposition in compact form	22
1.9. An image compressed by wavelets	24
1.10. A signal compressed by wavelets	25
1.11. A fingerprint compressed using wavelet packets	27

Chapter 2. Mathematical Framework	29
2.1. Introduction.	29
2.2. From the Fourier transform to the Gabor transform	30
2.2.1. Continuous Fourier transform	30
2.2.2. The Gabor transform	35
2.3. The continuous transform in wavelets	37
2.4. Orthonormal wavelet bases	41
2.4.1. From continuous to discrete transform	41
2.4.2. Multi-resolution analysis and orthonormal wavelet bases	42
2.4.3. The scaling function and the wavelet	46
2.5. Wavelet packets	50
2.5.1. Construction of wavelet packets	50
2.5.2. Atoms of wavelet packets	52
2.5.3. Organization of wavelet packets	53
2.6. Biorthogonal wavelet bases	55
2.6.1. Orthogonality and biorthogonality	55
2.6.2. The duality raises several questions	56
2.6.3. Properties of biorthogonal wavelets	57
2.6.4. Semi-orthogonal wavelets	60
Chapter 3. From Wavelet Bases to the Fast Algorithm	63
3.1. Introduction.	63
3.2. From orthonormal bases to the Mallat algorithm.	64
3.3. Four filters	65
3.4. Efficient calculation of the coefficients	67
3.5. Justification: projections and twin scales	68
3.5.1. The decomposition phase	69
3.5.2. The reconstruction phase	72
3.5.3. Decompositions and reconstructions of a higher order	75
3.6. Implementation of the algorithm	75
3.6.1. Initialization of the algorithm.	76
3.6.2. Calculation on finite sequences.	77
3.6.3. Extra coefficients	77
3.7. Complexity of the algorithm.	78
3.8. From 1D to 2D.	79
3.9. Translation invariant transform	81
3.9.1. ε -decimated DWT	83
3.9.2. Calculation of the SWT	83
3.9.3. Inverse SWT.	87

Chapter 4. Wavelet Families	89
4.1. Introduction.	89
4.2. What could we want from a wavelet?	90
4.3. Synoptic table of the common families	91
4.4. Some well known families	92
4.4.1. Orthogonal wavelets with compact support	93
4.4.1.1. Daubechies wavelets: dbN	93
4.4.1.2. Symlets: symN	96
4.4.1.3. Coiflets: coifN.	97
4.4.2. Biorthogonal wavelets with compact support: bior	99
4.4.3. Orthogonal wavelets with non-compact support.	101
4.4.3.1. The Meyer wavelet: meyr	101
4.4.3.2. An approximation of the Meyer wavelet: dmeyr	102
4.4.3.3. Battle and Lemarié wavelets: btlm.	103
4.4.4. Real wavelets without filters	104
4.4.4.1. The Mexican hat: mexh	104
4.4.4.2. The Morlet wavelet: morl	105
4.4.4.3. Gaussian wavelets: gausN.	106
4.4.5. Complex wavelets without filters	106
4.4.5.1. Complex Gaussian wavelets: cgau.	106
4.4.5.2. Complex Morlet wavelets: cmorl	107
4.4.5.3. Complex frequency B-spline wavelets: fbsp	108
4.5. Cascade algorithm.	109
4.5.1. The algorithm and its justification	110
4.5.2. An application.	112
4.5.3. Quality of the approximation	113
Chapter 5. Finding and Designing a Wavelet	115
5.1. Introduction.	115
5.2. Construction of wavelets for continuous analysis	116
5.2.1. Construction of a new wavelet	116
5.2.1.1. The admissibility condition	116
5.2.1.2. Simple examples of admissible wavelets	117
5.2.1.3. Construction of wavelets approaching a pattern	119
5.2.2. Application to pattern detection	124
5.3. Construction of wavelets for discrete analysis	131
5.3.1. Filter banks	132
5.3.1.1. From the Mallat algorithm to filter banks.	132
5.3.1.2. The perfect reconstruction condition	133
5.3.1.3. Construction of perfect reconstruction filter banks	134
5.3.1.4. Examples of perfect reconstruction filter banks	137
5.3.2. Lifting	140
5.3.2.1. The lifting method	140

5.3.2.2. Lifting and the polyphase method	141
5.3.3. Lifting and biorthogonal wavelets	146
5.3.4. Construction examples.	149
5.3.4.1. Illustrations of lifting.	149
5.3.4.2. Construction of wavelets with more vanishing moments	156
5.3.4.3. Approximation of a form by lifting	157
Chapter 6. A Short 1D Illustrated Handbook	159
6.1. Introduction.	159
6.2. Discrete 1D illustrated handbook	160
6.2.1. The analyzed signals	160
6.2.2. Processing carried out	161
6.2.3. Commented examples	162
6.2.3.1. A sum of sines.	162
6.2.3.2. A frequency breakdown	164
6.2.3.3. White noise	165
6.2.3.4. Colored noise	166
6.2.3.5. A breakdown	168
6.2.3.6. Two breakdowns of the derivative.	169
6.2.3.7. A breakdown of the second derivative	170
6.2.3.8. A superposition of signals.	172
6.2.3.9. A ramp with colored noise	173
6.2.3.10. A first real signal	175
6.2.3.11. A second real signal	176
6.3. The contribution of analysis by wavelet packets	178
6.3.1. Example 1: linear and quadratic chirp.	178
6.3.2. Example 2: a sine	181
6.3.3. Example 3: a composite signal	182
6.4. “Continuous” 1D illustrated handbook.	183
6.4.1. Time resolution	183
6.4.1.1. Locating a discontinuity in the signal	183
6.4.1.2. Locating a discontinuity in the derivative of the signal.	185
6.4.2. Regularity analysis	187
6.4.2.1. Locating a Hölderian singularity	187
6.4.2.2. Analysis of the Hölderian regularity of a singularity	188
6.4.2.3. Study of two Hölderian singularities	192
6.4.3. Analysis of a self-similar signal	193

Chapter 7. Signal Denoising and Compression	197
7.1. Introduction.	197
7.2. Principle of denoising by wavelets	198
7.2.1. The model	198
7.2.2. Denoising: before and after	198
7.2.3. The algorithm	199
7.2.4. Why does it work?	200
7.3. Wavelets and statistics	200
7.3.1. Kernel estimators and estimators by orthogonal projection	201
7.3.2. Estimators by wavelets.	201
7.4. Denoising methods	202
7.4.1. A first estimator	203
7.4.2. From coefficient selection to thresholding coefficients.	204
7.4.3. Universal thresholding.	206
7.4.4. Estimating the noise standard deviation.	206
7.4.5. Minimax risk	207
7.4.6. Further information on thresholding rules	208
7.5. Example of denoising with stationary noise.	209
7.6. Example of denoising with non-stationary noise	212
7.6.1. The model with ruptures of variance	213
7.6.2. Thresholding adapted to the noise level change-points.	214
7.7. Example of denoising of a real signal	216
7.7.1. Noise unknown but “homogenous” in variance by level.	216
7.7.2. Noise unknown and “non-homogenous” in variance by level.	217
7.8. Contribution of the translation invariant transform	218
7.9. Density and regression estimation	221
7.9.1. Density estimation	221
7.9.2. Regression estimation	224
7.10. Principle of compression by wavelets	225
7.10.1. The problem	225
7.10.2. The basic algorithm.	225
7.10.3. Why does it work?	226
7.11. Compression methods	226
7.11.1. Thresholding of the coefficients	226
7.11.2. Selection of coefficients	228
7.12. Examples of compression.	229
7.12.1. Global thresholding	229
7.12.2. A comparison of the two compression strategies	230
7.13. Denoising and compression by wavelet packets	233
7.14. Bibliographical comments	234

Chapter 8. Image Processing with Wavelets	235
8.1. Introduction	235
8.2. Wavelets for the image	236
8.2.1. 2D wavelet decomposition	237
8.2.2. Approximation and detail coefficients	238
8.2.2.1. Horizontal, vertical and diagonal details	238
8.2.2.2. Two representations of decomposition	240
8.2.3. Approximations and details	241
8.3. Edge detection and textures	243
8.3.1. A simple geometric example	243
8.3.2. Two real life examples	245
8.4. Fusion of images	247
8.4.1. The problem through a simple example	247
8.4.2. Fusion of fuzzy images	250
8.4.3. Mixing of images	252
8.5. Denoising of images	256
8.5.1. An artificially noisy image	257
8.5.2. A real image	260
8.6. Image compression	262
8.6.1. Principles of compression	262
8.6.2. Compression and wavelets	263
8.6.2.1. Why does it work?	263
8.6.2.2. Why threshold?	265
8.6.2.3. Examples of image compression	266
8.6.3. “True” compression	269
8.6.3.1. The quantization	270
8.6.3.2. EZW coding	273
8.6.3.3. Comments on the JPEG 2000 standard	276
Chapter 9. An Overview of Applications	279
9.1. Introduction	279
9.1.1. Why does it work?	279
9.1.2. A classification of the applications	281
9.1.3. Two problems in which the wavelets are competitive	283
9.1.4. Presentation of applications	283
9.2. Wind gusts	285
9.3. Detection of seismic jolts	287
9.4. Bathymetric study of the marine floor	290
9.5. Turbulence analysis	291
9.6. Electrocardiogram (ECG): coding and moment of the maximum	294
9.7. Eating behavior	295
9.8. Fractional wavelets and fMRI	297
9.9. Wavelets and biomedical sciences	298

9.9.1. Analysis of 1D biomedical signals	300
9.9.1.1. Bioacoustic signals	300
9.9.1.2. Electrocardiogram (ECG)	300
9.9.1.3. Electroencephalogram (EEG)	301
9.9.2. 2D biomedical signal analysis	301
9.9.2.1. Nuclear magnetic resonance (NMR)	301
9.9.2.2. fMRI and functional imagery	302
9.10. Statistical process control	302
9.11. Online compression of industrial information	304
9.12. Transitorics in underwater signals	306
9.13. Some applications at random	308
9.13.1. Video coding	308
9.13.2. Computer-assisted tomography	309
9.13.3. Producing and analyzing irregular signals or images	309
9.13.4. Forecasting	310
9.13.5. Interpolation by kriging	310
Appendix. The EZW Algorithm	313
A.1. Coding	313
A.1.1. Detailed description of the EZW algorithm (coding phase)	313
A.1.2. Example of application of the EZW algorithm (coding phase)	314
A.2. Decoding	317
A.2.1. Detailed description of the EZW algorithm (decoding phase)	317
A.2.2. Example of application of the EZW algorithm (decoding phase)	318
A.3. Visualization on a real image of the algorithm's decoding phase	318
Bibliography	321
Index	329
