<b>PREFACE</b> . . . . .	xiii
<b>NOTATIONS</b> . . . . .	xvii
<b>SYMBOLS</b> . . . . .	xix
<b>CHAPTER 1. THERMODYNAMIC FUNCTIONS AND VARIABLES</b> . . . . .	1
1.1. State variables and characteristic functions of a phase . . . . .	2
1.1.1. Intensive and extensive conjugate variables . . . . .	2
1.1.2. Variations in internal energy during a transformation . . . . .	3
1.1.3. Characteristic function associated with a canonical set of variables . . . . .	5
1.2. Partial molar parameters . . . . .	7
1.2.1. Definition . . . . .	7
1.2.2. Properties of partial molar variables . . . . .	8
1.3. Chemical potential and generalized chemical potentials . . . . .	8
1.3.1. Chemical potential and partial molar free enthalpy . . . . .	8
1.3.2. Definition of generalized chemical potential . . . . .	9
1.3.3. Variations in the chemical potential and generalized chemical potential with variables . . . . .	10
1.3.4. Gibbs–Duhem relation . . . . .	10
1.3.5. Generalized Helmholtz relations . . . . .	11
1.3.6. Chemical system associated with the general system . . . . .	12
1.4. The two modeling scales . . . . .	14

---

<b>CHAPTER 2. MACROSCOPIC MODELING OF A PHASE . . . . .</b>	<b>15</b>
2.1. Thermodynamic coefficients and characteristic matrices . . . . .	15
2.1.1. Thermodynamic coefficients and characteristic matrix associated with the internal energy . . . . .	15
2.1.2. Symmetry of the characteristic matrix. . . . .	17
2.1.3. The thermodynamic coefficients needed and required to thermodynamically define the phase . . . . .	17
2.1.4. Choosing other variables: thermodynamic coefficients and characteristic matrix associated with a characteristic function . . .	19
2.1.5. Change in variable from one characteristic matrix to another . . . . .	22
2.1.6. Relations between thermodynamic coefficients and secondary derivatives of the characteristic function . . . . .	26
2.1.7. Examples of thermodynamic coefficients: calorimetric coefficients . . . . .	27
2.2. Partial molar variables and thermodynamic coefficients . . . . .	27
2.3. Common variables and thermodynamic coefficients. . . . .	28
2.3.1. State equation . . . . .	29
2.3.2. Expansion coefficients . . . . .	30
2.3.3. Molar heat capacities . . . . .	32
2.3.4. Young's Modulus. . . . .	34
2.3.5. Electric permittivity . . . . .	34
2.3.6. Volumic and area densities of electric charge . . . . .	34
2.4. Thermodynamic charts: justification of different types . . . . .	35
2.4.1. Representation of a variable as a function of its conjugate . . . . .	35
2.4.2. Representation of a characteristic function as a function of one of its natural variables . . . . .	38
2.5. Stability of phases . . . . .	39
2.5.1. Case of ensemble $\mathcal{E}_0$ of extensive variables. . . . .	40
2.5.2. Coefficients associated with ensemble $\mathcal{E}_n$ . . . . .	43
2.5.3. Case of other ensembles of variables . . . . .	44
2.5.4. Conclusion: stability conditions of a phase in terms of thermodynamic coefficients. . . . .	46
2.5.5. Example – applying stability conditions . . . . .	46
2.6. Consistency of thermodynamic data . . . . .	48
2.7. Conclusion on the macroscopic modeling of phases. . . . .	49

---

<b>CHAPTER 3. MULTI-COMPOUND PHASES – SOLUTIONS . . . . .</b>	<b>51</b>
3.1. Variables attached to solutions . . . . .	51
3.1.1. Characterizing a solution . . . . .	52
3.1.2. Composition of a solution . . . . .	53
3.1.3. Peculiar variables and mixing variables . . . . .	54
3.2. Recap of ideal solutions . . . . .	57
3.2.1. Thermodynamic definition . . . . .	57
3.2.2. Molar Gibbs energy of mixing of an ideal solution . . . . .	57
3.2.3. Molar enthalpy of mixing of the ideal solution . . . . .	57
3.2.4. Molar entropy of mixing of the ideal solution. . . . .	58
3.2.5. Molar volume of mixing . . . . .	58
3.2.6. Molar heat capacity of ideal solution: Kopp’s law . . . . .	58
3.3. Characterization imperfection of a real solution. . . . .	59
3.3.1. Lewis activity coefficients . . . . .	60
3.3.2. Characterizing the imperfection of a real solution by the excess Gibbs energy . . . . .	71
3.3.3. Other ways to measure the imperfection of a solution . . . . .	74
3.4. Activity of a component in any solution: Raoult’s and Henry’s laws. . . . .	76
3.5. Ionic solutions. . . . .	77
3.5.1. Chemical potential of an ion . . . . .	78
3.5.2. Relation between the activities of ions and the overall activity of solutes . . . . .	80
3.5.3. Mean concentration and mean ionic activity coefficient . . . . .	80
3.5.4. Obtaining the activity coefficient of an individual ion. . . . .	82
3.5.5. Ionic strength . . . . .	82
3.6. Curves of molar variables as a function of the composition in binary systems of a solution with two components. . . . .	83
<b>CHAPTER 4. STATISTICS OF OBJECT COLLECTIONS . . . . .</b>	<b>87</b>
4.1. The need to statistically process a system . . . . .	87
4.1.1. Collections, system description – Stirling’s approximation . . . . .	87
4.1.2. Statistical description hypothesis . . . . .	88
4.1.3. The Boltzmann principle . . . . .	89
4.2. Statistical effects of distinguishable non-quantum elements. . . . .	89
4.2.1. Distribution law . . . . .	90
4.2.2. Calculation of $\alpha$ . . . . .	91
4.2.3. Determining coefficient $\beta$ . . . . .	92
4.2.4. Energy input to a system . . . . .	95

---

4.2.5. The Boltzmann principle for entropy . . . . .	96
4.3. The quantum description and space of phases . . . . .	97
4.3.1. Wave functions and energy levels . . . . .	97
4.3.2. Space of phases: discernibility of objects and states . . . . .	98
4.3.3. Localization and non-localization of objects . . . . .	98
4.4. Statistical effect of localized quantum objects . . . . .	99
4.5. Collections of non-localized quantum objects . . . . .	100
4.5.1. Eigen symmetrical and antisymmetric functions of non-localized objects . . . . .	101
4.5.2. Statistics of non-localized elements with symmetrical wave functions . . . . .	103
4.5.3. Statistics of non-localized elements with an asymmetric function . . . . .	105
4.5.4. Classical limiting case . . . . .	107
4.6. Systems composed of different particles without interactions . . . . .	107
4.7. Unicity of coefficient $\beta$ . . . . .	108
4.8. Determining coefficient $\alpha$ in quantum statistics . . . . .	110
<b>CHAPTER 5. CANONICAL ENSEMBLES AND THERMODYNAMIC FUNCTIONS.</b> . . . . .	<b>113</b>
5.1. An ensemble . . . . .	113
5.2. Canonical ensemble . . . . .	114
5.2.1. Description of a canonical ensemble. . . . .	114
5.2.2. Law of distribution in a canonical ensemble . . . . .	115
5.2.3. Canonical partition function. . . . .	116
5.3. Molecular partition functions and canonical partition functions . . . . .	117
5.3.1. Canonical partition functions for ensembles of discernable molecules . . . . .	117
5.3.2. Canonical partition functions of indiscernible molecules . . . . .	118
5.4. Thermodynamic functions and the canonical partition function . . . . .	120
5.4.1. Expression of internal energy . . . . .	120
5.4.2. Entropy and canonical partition functions . . . . .	121
5.4.3. Expressing other thermodynamic functions and thermodynamic coefficients in the canonical ensemble . . . . .	123
5.5. Absolute activity of a constituent . . . . .	125
5.6. Other ensembles of systems and associated characteristic functions. . . . .	127

---

<b>CHAPTER 6. MOLECULAR PARTITION FUNCTIONS . . . . .</b>	<b>131</b>
6.1. Definition of the molecular partition function . . . . .	131
6.2. Decomposition of the molecular partition function into partial partition functions . . . . .	131
6.3. Energy level and thermal agitation. . . . .	133
6.4. Translational partition functions . . . . .	134
6.4.1. Translational partition function with the only constraint being the recipient . . . . .	135
6.4.2. Translational partition function with the constraint being a potential centered and the container walls . . . .	137
6.5. Maxwell distribution laws. . . . .	139
6.5.1. Distribution of ideal gas molecules in volume . . . . .	139
6.5.2. Distribution of ideal gas molecules in velocity . . . . .	140
6.6. Internal partition functions . . . . .	142
6.6.1. Vibrational partition function . . . . .	142
6.6.2. Rotational partition function . . . . .	144
6.6.3. Nuclear partition function and correction of symmetry due to nuclear spin . . . . .	146
6.6.4. Electronic partition function . . . . .	149
6.7. Partition function of an ideal gas. . . . .	149
6.8. Average energy and equipartition of energy . . . . .	150
6.8.1. Mean translational energy . . . . .	151
6.8.2. Mean rotational energy . . . . .	152
6.8.3. Mean vibrational energy . . . . .	152
6.9. Translational partition function and quantum mechanics . . . . .	153
6.10. Interactions between species . . . . .	155
6.10.1. Interactions between charged particles . . . . .	155
6.10.2. Interaction energy between two neutral molecules . . . . .	156
6.11. Equilibrium constants and molecular partition functions. . . . .	161
6.11.1. Gaseous phase homogeneous equilibria . . . . .	162
6.11.2. Liquid phase homogeneous equilibria . . . . .	164
6.11.3. Solid phase homogenous equilibria . . . . .	166
6.12. Conclusion on the macroscopic modeling of phases . . . . .	167
<b>CHAPTER 7. PURE REAL GASES. . . . .</b>	<b>169</b>
7.1. The three states of the pure compound: critical point. . . . .	169
7.2. Standard state of a molecular substance. . . . .	170
7.3. Real gas – macroscopic description . . . . .	171
7.3.1. Pure gas diagram (P-V). . . . .	171
7.3.2. “Cubic” state equations . . . . .	172

---

7.3.3. Other state equations . . . . .	177
7.3.4. The theorem of corresponding states and the generalized compressibility chart . . . . .	180
7.3.5. Molar Gibbs energy or chemical potential of a real gas . . . . .	182
7.3.6. Fugacity of a real gas . . . . .	183
7.3.7. Heat capacities of gases . . . . .	186
7.4. Microscopic description of a real gas . . . . .	188
7.4.1. Canonical partition function of a fluid . . . . .	188
7.4.2. Helmholtz energy and development of the virial . . . . .	195
7.4.3. Forms of the second coefficient of the virial . . . . .	197
7.4.4. Macroscopic state equations and microscopic description . . . . .	202
7.4.5. Chemical potential and fugacity of a real gas . . . . .	203
7.4.6. Conclusion on microscopic modeling of a real gas . . . . .	204
7.5. Microscopic approach of the heat capacity of gases . . . . .	206
7.5.1. Classical theorem from the equipartition of energy . . . . .	207
7.5.2. Quantum theorem of heat capacity at constant volume . . . . .	208
<b>CHAPTER 8. GAS MIXTURES . . . . .</b>	<b>213</b>
8.1. Macroscopic modeling of gas mixtures . . . . .	213
8.1.1. Perfect solutions of perfect gases . . . . .	213
8.1.2. Mixture of real gases . . . . .	215
8.2. Characterizing gas mixtures . . . . .	217
8.2.1. Method of the state equations of gas mixtures . . . . .	218
8.2.2. The Beattie–Bridgeman state equation . . . . .	218
8.2.3. Calculating the compressibility coefficient of a mixture . . . . .	222
8.2.4. Method using activity coefficients of solutions . . . . .	225
8.3. Determining activity coefficients of a solution from an equation of state . . . . .	225
8.3.1. Methodology . . . . .	226
8.3.2. Studying solutions using the PSRK method . . . . .	227
8.3.3. VTPR Model . . . . .	230
8.3.4. VGTPR Model . . . . .	233
