

## Table of Contents

<b>Symbols</b> . . . . .	ix
<b>Preface</b> . . . . .	xxiii
<b>Chapter 1. Flows in Nozzles</b> . . . . .	1
1.1. Sound propagation in the presence of chemical reactions . . . . .	1
1.1.1. Thermodynamic considerations . . . . .	2
1.1.2. Sound propagation in a mono-reactive medium . . . . .	7
1.1.3. Sound propagation in a multi-reactive medium . . . . .	12
1.2. Relaxed flows in nozzles . . . . .	26
1.2.1. Calculation of a continuous flow with a recombination-dissociation reaction in a de Laval nozzle . . . . .	27
1.2.2. Asymptotic study of the transonic zone of a continuous mono- dimensional flow in a de Laval nozzle . . . . .	31
1.3. Flows in thermal and chemical non-equilibrium . . . . .	35
1.3.1. Balance equations and closure relations in the presence of thermal and chemical non-equilibria . . . . .	35
1.3.2. Application . . . . .	37
1.4. Conclusion about flows in nozzles . . . . .	45
<b>Chapter 2. Chemical Reactors</b> . . . . .	47
2.1. Ideal reactors, real reactors, balance equations . . . . .	48
2.1.1. Ideal chemical reactors . . . . .	48
2.1.2. Balance equations for chemical reactors . . . . .	50
2.2. Perfectly mixed homogeneous chemical reactors . . . . .	55
2.2.1. Equations for a perfectly stirred homogeneous chemical reactor . . . . .	55
2.2.2. Steady regimes in perfectly stirred homogeneous chemical reactors . . . . .	59

2.2.3. Stability of operating points in the perfectly stirred homogeneous chemical reactor . . . . .	61
2.3. Tubular reactor . . . . .	67
2.3.1. Plug flow reactor . . . . .	68
2.3.2. Reactor with axial mixing . . . . .	70
2.3.3. Reactor with radial mixing . . . . .	73
2.4. Residence time distribution . . . . .	74
2.4.1. Balance equations . . . . .	74
2.4.2. Perfectly stirred homogeneous reactors in a steady regime . . . . .	76
2.4.3. Plug flow reactors . . . . .	76
2.4.4. Poiseuille flow . . . . .	76
2.4.5. Real reactors . . . . .	78
<b>Chapter 3. Laminar and Turbulent Flames . . . . .</b>	<b>79</b>
3.1. Laminar premixed combustion . . . . .	79
3.1.1. Rankine-Hugoniot theory . . . . .	80
3.1.2. Velocity and structure of the plane adiabatic laminar and steady premixed flame . . . . .	87
3.1.3. Other examples of a steady laminar premixed flame . . . . .	91
3.2. Laminar non-premixed combustion . . . . .	95
3.2.1. Burke–Schumann problem . . . . .	95
3.2.2. Other examples of diffusion flames . . . . .	98
3.3. Turbulent combustion . . . . .	104
3.3.1. Averaged balance equation for turbulent combustion . . . . .	105
3.3.2. Premixed turbulent combustion regimes . . . . .	107
3.3.3. Non-premixed turbulent combustion regimes . . . . .	110
3.3.4. Models of turbulent combustion . . . . .	112
3.3.5. LESs in combustion . . . . .	119
3.3.6. Triple flames . . . . .	121
<b>APPENDICES . . . . .</b>	<b>125</b>
<b>Appendix 1. Dimensionless Numbers, Similarity . . . . .</b>	<b>127</b>
A1.1. Fundamentals of dimensional analysis: $\Pi_i$ groups . . . . .	128
A1.1.1. Basic considerations . . . . .	128
A1.1.2. Vaschy–Buckingham theorem (1890) or $\Pi$ theorem . . . . .	129
A1.1.3. Practical advantage to dimensional analysis . . . . .	130
A1.1.4. Example of application: head loss in a cylindrical pipe . . . . .	130
A1.2. Similarity . . . . .	132
A1.2.1. Definition . . . . .	132
A1.2.2. Application: condition of similarity in a soft balloon placed in a current of air with a given velocity . . . . .	133

A1.3. Analytical searching for solutions to a heat transfer problem (self-similar solution) . . . . .	135
A1.4. Some dimensionless numbers . . . . .	137
<b>Appendix 2. Thermodynamic Functions</b> . . . . .	<b>141</b>
A2.1. General points . . . . .	141
A2.2. Translational motion . . . . .	142
A2.3. Internal motions . . . . .	143
A2.3.1. Monatomic species . . . . .	143
A2.3.2. Diatomic species . . . . .	145
A2.3.3. Linear polyatomic species . . . . .	146
A2.3.4. Nonlinear polyatomic species . . . . .	147
<b>Appendix 3. Concepts of Turbulence</b> . . . . .	<b>149</b>
A3.1. Experimental demonstration . . . . .	151
A3.1.1. Reynolds' experiment . . . . .	151
A3.1.2. Viscous flow over a smooth plane plate . . . . .	152
A3.1.3. Effect of roughness of the plate . . . . .	153
A3.1.4. Effect of turbulence on chemical reactivity . . . . .	153
A3.2. Apparition and damping of turbulence . . . . .	154
A3.2.1. Instability between two superposed fluids . . . . .	154
A3.2.2. Instability of a fluid between two rotating cylinders . . . . .	158
A3.2.3. Instability of a premixed flame . . . . .	165
A3.2.4. Damping of turbulence . . . . .	169
A3.3. Classic turbulence (RANS model) . . . . .	170
A3.3.1. Turbulent transfer and chemical kinetics coefficients . . . . .	170
A3.3.2. Remarks about averages and scales . . . . .	176
A3.3.3. $k - \epsilon$ models (closure for transfer terms) . . . . .	178
A3.3.4. Spectral analysis and Kolmogorov's theory . . . . .	181
A3.4. Ideas about large eddy simulation . . . . .	185
A3.4.1. Filtering . . . . .	187
A3.4.2. Filtered balance equations for a non-reactive incompressible fluid . . . . .	189
A3.4.3. Closure relations for the filtered balance equations . . . . .	190
A3.5. Conclusion . . . . .	193
<b>Appendix 4. Thermodynamic functions for a mixture in disequilibrium</b> . . . . .	<b>195</b>
A4.1. Thermodynamics . . . . .	195
A4.2. Chemistry . . . . .	197
A4.3. Vibration . . . . .	197

<b>Appendix 5. Notion of bifurcation</b> .....	199
<b>Appendix 6. Confined flame</b> .....	201
<b>Appendix 7. Limits of Validity of the First-order Expansions for Diffusion Flames</b> .....	203
A7.1. Burke–Schumann flame .....	203
A7.2. Juxtaposed oxidizer/fuel flows from rectangular burners .....	204
<b>Bibliography</b> .....	207
<b>Index</b> .....	219
