Preface	xiii
Chapter 1. From Geodata to Geographic Knowledge	1
1.1. A rapid history of urban planning and information technology.	2
1.2. Territorial intelligence, smart cities and smart planning	2
1.2.1. Smart cities	3
1.2.2. Territorial intelligence	6
1.2.3. Smart Urban Planning.	7
1.3. Data acquisition sensors	10
1.3.1. Digital sensors	10
1.3.2. Citizens as sensors – crowdsourcing	12
1.4. About reasoning.	13
1.4.1. Spatial reasoning.	13
1.4.2. Geographic reasoning.	14
1.5. Promises of geographic knowledge	14
1.6. Conclusion: advocacy for geographic knowledge infrastructures.	17
Chapter 2. Knowledge Representation	19
2.1. Automated reasoning.	20
2.1.1. Data, information and knowledge.	20
2.1.2. Vision of Turban/Aaronson	23
2.2. Logical formalisms	24
2.2.1. Propositional logic.	25
2.2.2. Predicate logic	26

2.2.3. Descriptive logics	27
2.2.4. Fuzzy sets and logics	30
2.2.5. About Lewis Carroll's example	30
2.2.6. Logics and space.	32
2.3. RDF (Resource Description Framework)	32
2.4. Rule modeling	34
2.4.1. Rules and classical logics	34
2.4.2. Decision trees and tables	34
2.4.3. Rules and fuzzy logic	35
2.4.4. From business rules to geographic rules	36
2.4.5. Generic model of rules	36
2.5. About mathematical models	37
2.6. Case-based reasoning	38
2.7. Conclusion: what is special for geographic knowledge?.	39
Chapter 3. Towards Geographic Knowledge Systems.	41
3.1. Lessons learnt from GIS.	41
3.1.1. About the mathematical visions of the world	42
3.1.2. About geo-objects modeling and storing	43
3.1.3. About data quality and homologies.	44
3.1.4. About multiple representations and granularity of interest	45
3.1.5. Requirements for geographic knowledge systems	45
3.2. GKS structure	46
3.3. Towards the integration of external knowledge	50
3.4. Prolegomena and principles	51
3.4.1. Prolegomena	51
3.4.2. Principles	54
3.5. About quality of geographic knowledge bases	57
3.6. About multimedia knowledge	58
3.7. First conclusion on GKS	59
Chapter 4. Geographic Objects	61
4.1. About the semantics of geographic objects	62
4.1.1. Categories or classes	62
4.1.2. Place names and identifiers	63
4.1.3. Geometric types	63
4.2. From lines to ribbons	64
4.2.1. Rectangular ribbons.	65
4.2.2. Ribbons and taenic transformation	65

4.2.3. Loose ribbons	67
4.3. Mutation of object geometric types	69
4.3.1. General process (GRD process)	70
4.3.2. Rules of visual acuity applied to geographic objects.	71
4.4. Fuzzy geographic objects	72
4.5. About altitude	74
4.5.1. Irregular points	74
4.5.2. Gridded points	75
4.5.3. Contour level curves.	75
4.6. Continuous fields	75
4.7. Quality and geometric homology relations	77
4.7.1. Quality control based on rules	78
4.7.2. Geometric homology	78
4.8. Geographic objects and projects	80
4.9. Final remarks concerning geographic objects	80
Chapter 5. Geographic Relations	83
5.1. Spatial operations	84
5.1.1. Minimum bounding rectangle	84
5.1.2. Centroid	84
5.1.3. Buffer zones	86
5.1.4. Union, intersection and difference	86
5.1.5. Convex hull	88
5.2. Spatial relations	89
5.2.1. Topological relations	90
5.2.2. Projective and other spatial relations	93
5.2.3. Rectangle relations.	94
5.3. Characteristics of spherical spatial relations	95
5.3.1. Projective relations	95
5.3.2. Projective relations for areas	96
5.4. Spatial relations in urban space.	98
5.4.1. Other binary topological relations.	99
5.4.2. Relations between urban features and places	99
5.5. Ribbon operations and relations	99
5.5.1. Simple operations and relations	100
5.5.2. Orientation	102
5.5.3. 3D Relations between ribbons	102
5.5.4. Chaining ribbons.	102
5.6. Mutation of topological relations according to the granularity of interest	104

5.6.1. Example of topological mutation due to granularity of interest	105
5.6.2. Mutation table of Egenhofer relations	107
5.6.3. Mutation of ribbon relations	107
5.7. Other geographic relations	108
5.8. Conclusion regarding geographic relations	109
Chapter 6. Geographic Ontologies	111
6.1. Introduction	112
6.2. Generalities about ontologies	113
6.2.1. Role and definition	114
6.2.2. Categories of ontologies	115
6.2.3. Ontology approaches	115
6.2.4. Ontology examples	116
6.2.5. Ontology components	118
6.2.6. Ontology languages	119
6.2.7. Conventional ontologies applied to geography	122
6.3. Towntology: ontologies for urban planning	124
6.3.1. Genesis and objectives of the towntology project	124
6.3.2. Lessons learnt from the towntology project	127
6.4. Characteristics of geographic ontologies	128
6.4.1. Space representation and management	129
6.4.2. Links with linguistics	130
6.5. Examples of geographic ontologies	132
6.6. Fusioning ontologies	134
6.7. Conclusion and challenges regarding geographic ontologies	135
Chapter 7. Complex Geographic Objects and Structures	139
7.1. Simple collections	139
7.2. Ribbon graphs and networks	141
7.3. Tessellations	143
7.3.1. Hierarchical tessellations	145
7.3.2. Reduction of tessellations	145
7.4. Shape grammars and applications to geographic objects	147
7.4.1. Introduction to shape grammars	148
7.4.2. Applications to landscape and town planning	152
7.5. Complex geographic objects and their relations	155
7.6. Conclusion	156

Chapter 8. Gazetteers and Multilingualism	157
8.1. Generalities	158
8.2. Examples	163
8.2.1. Simple gazetteer	163
8.2.2. Gazetteer as an index for a map (street directory)	164
8.2.3. Gazetteer for a local post-office	164
8.2.4. Gazetteer for hydrology	164
8.2.5. Gazetteer for the history of a place	165
8.2.6. Gazetteer covering several countries	165
8.3. Existing systems	165
8.3.1. GeoNames	166
8.3.2. GeoSPARQL	167
8.3.3. OntoGazetteer	170
8.3.4. Metagazetteer	171
8.4. Inference rules for matching geographic ontologies and gazetteers in different languages	172
8.4.1. Languages	172
8.4.2. Homology relation for toponyms	173
8.4.3. About exonyms and endonyms	174
8.4.4. Matching two geographic ontologies each in different languages	176
8.4.5. Homologous geographic objects	176
8.5. Enriching geographic knowledge bases by rules	176
8.5.1. Inferring geometry	177
8.5.2. From homologous geometry to homologous objects	178
8.5.3. Inferring ontological relations	179
8.6. Conclusion	181
Chapter 9. Geographic Knowledge Discovery and Data Mining	183
9.1. Introduction to data mining	185
9.1.1. KDD process	185
9.1.2. Association rules in non-spatial databases	186
9.2. Elements of spatial data mining	189
9.2.1. Co-location patterns	190
9.2.2. Association rules extracted from spatial data mining	192
9.3. Conclusion	193

Chapter 10. Geographic Applicative Rules	195
10.1. About rules in information technology	196
10.2. Introductory example regarding street naming.	200
10.3. Geographic knowledge and reasoning.	201
10.3.1. General information	201
10.3.2. Geographic knowledge bases	203
10.4. Study of the semantics of the geographic rules	203
10.4.1. Global rules	204
10.4.2. Local rules	206
10.4.3. Low level or generic rules	211
10.4.4. Rules and plurality of places	211
10.4.5. Rules and logics of stakeholders.	212
10.4.6. Handling exceptions.	213
10.5. Toward applicative geographic rules modeling	213
10.5.1. General considerations	213
10.5.2. Outline of a model.	219
10.5.3. Rules indexing	220
10.5.4. Requirements for a rule language	220
10.6. Conclusion about applicative geographic rules	221
Chapter 11. Geovisualization and Chorems	223
11.1. Graphics semiology	224
11.2. From vision analytics to geovisualization.	227
11.2.1. Visual analytics – recommendations	227
11.2.2. Definition of geovisualization	229
11.2.3. Cartograms	230
11.2.4. Examples in geovisualization	231
11.2.5. How to lie with maps?	232
11.2.6. Visual DB access.	234
11.3. Chorems	235
11.3.1. Elementary chorems.	237
11.3.2. Approaches, manual versus automatic?	239
11.3.3. Chorems as a new way to access geographic databases and knowledge bases	242
11.3.4. Final remarks regarding chorems	245
11.4. Dashboards for smart cities	245
11.5. Conclusions	246

Chapter 12. GKS: Querying and Interoperability	247
12.1. Geographic queries	247
12.1.1. Textual queries	247
12.1.2. Visual languages and queries	248
12.2. Geographic knowledge bases interoperability	252
12.2.1. Generalities about interoperability	253
12.2.2. Interoperability of databases based on ontologies	255
12.2.3. Federating tessellations	257
12.2.4. Federating networks	257
12.2.5. Federating GKS.	260
12.3. Conclusion	260
Chapter 13. Conclusion: Knowledge as Infrastructure for Smart Governance	263
13.1. Business intelligence	263
13.2. GeoSpatial Business Intelligence or geo-intelligence	265
13.3. Territorial intelligence	266
13.3.1. Public participation	266
13.3.2. Smart people and smart governance	267
13.3.3. Smart people involvement	270
13.4. Knowledge as infrastructure for smart governance	271
13.4.1. Geographic knowledge organization	271
13.4.2. Geographic knowledge accessibility	272
13.4.3. Categories of geographic knowledge	272
13.4.4. Technology and sociological watching	272
13.4.5. Back on external knowledge	274
13.4.6. Geographic knowledge on the move	274
13.5. Conclusion, from knowledge to wisdom	275
Bibliography	277
Index	293
